ACCREDITATION

Stanford University is accredited by the Accrediting Commission for Senior Colleges and Universities of the Western Association of Schools and Colleges (WASC), 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; (510) 748-9001. In addition, certain programs of the University have specialized accreditation. For information, contact the Office of the University Registrar.

STATEMENT OF NONDISCRIMINATORY POLICY

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford’s Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

GOVERNING DOCUMENT/RESERVATION OF RIGHTS

Every effort is made to ensure that the degree requirement and course information, applicable policies, and other materials contained in the Stanford Bulletin are accurate and current. The University reserves the right to make changes at any time without prior notice. The Bulletin in the form as it exists online at Stanford Bulletin web site and ExploreCourses web site is therefore the governing document, and contains the then currently applicable policies and information. The University no longer produces an official printed copy version of the Bulletin.

ADDITIONAL INFORMATION

Additional information on Stanford University can be obtained through Stanford’s web site at http://www.stanford.edu.

ACADEMIC CALENDAR

Stanford Academic Calendar, 2017-18

The University bill is issued on the 20th of each month. Billed charges are due by the 15th of the following month. For more information, see the Student Financial Services (https://sfs.stanford.edu/student-accounts/pay-your-bill/understanding-your-student-account) site.

See the R&DE Student Housing site (https://rde.stanford.edu/studenthousing) for additional information on Housing deadlines. Key undergraduate dates are included below.

Issued March 6, 2017. All dates are subject to change at the discretion of the University.
AUTUMN QUARTER 2017-18

August 28 (Mon) M.D. first-year students, first day of instruction.

August 31 (Thu) M.D. second-year students, first day of instruction.

September 15 (Fri) Autumn Quarter Cardinal Care Waiver Deadline; see the Cardinal Care website (https://vaden.stanford.edu/insurance).

September 15 (Fri) M.B.A. 1st-year instructions begins.

September 15 (Fri, 5:00 p.m.) At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.

September 21 (Thu) Undergraduate housing opens for new students; see Residential & Dining Enterprises Calendar (http://studenthousing.stanford.edu/calendar).

September 25 (Mon) First day of quarter; instruction begins.

September 25 (Mon, 5:00 p.m.) Preliminary Study List deadline (https://registrar.stanford.edu/students/enrolling-courses/preliminary-study-list-deadline-courses-or-units). Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Undergraduate Special Registration Status (https://sregistrar.stanford.edu/students/special-registration-and-leaves/special-registration-statuses-undergraduates) or Graduate Special Registration Status (https://sregistrar.stanford.edu/students/special-registration-and-leaves/special-registration-statuses-graduate-professional). The late study list fee is $200.

September 25 (Mon, 5:00 p.m.) Deadline to submit Leave of Absence for full refund (see undergraduate leaves of absence (http://exploredegrees.stanford.edu/undergraduatedegreesandprograms/#leavesandreinstatementtext) and graduate leaves of absence (http://exploredegrees.stanford.edu/graduatedegrees/#leavereinstatementtext)). See Tuition and Refund Schedule (https://registrar.stanford.edu/students/tuition-and-fees/tuition-refund-schedule) for a full refund schedule.

September 28 (Thu) Conferral of degrees, Summer Quarter.

September 29 (Fri) GSB course add/drop deadline.

October 13 (Fri, 5:00 p.m.) Final Study List deadline (https://registrar.stanford.edu/students/enrolling-courses/final-study-list-deadline-add-drop-swap-or-adjust-courses-or-units), except GSB. Last day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a ‘W’ notation will appear on the transcript.

November 6 (Mon, 5:00 p.m.) Last day for tuition reassessment for dropped courses or units.

November 17 (Fri, 5:00 p.m.) Change of grading basis deadline, except GSB.

November 17 (Fri, 5:00 p.m.) Course withdrawal deadline, except GSB, Law, and M.D.

November 17 (Fri, 5:00 p.m.) Application deadline for Autumn Quarter degree conferral (https://sites.stanford.edu/sa-registrar/students/graduation).

November 20-24 (Mon-Fri) Thanksgiving Recess (no classes).
WINTER QUARTER 2017-18

October 29 (Sun) Axess opens for course enrollment.

December 29 (Fri) At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.

January 6 (Sat, 8:00 a.m.) Undergraduate housing opens for Winter Quarter; see Residential & Dining Enterprises Calendar (http://studenthousing.stanford.edu/calendar).

January 8 (Mon) First day of quarter; instruction begins for all students.

January 8 (Mon, 5:00 p.m.) Preliminary Study List deadline (https://registrar.stanford.edu/students/enrolling-courses/preliminary-study-list-deadline-courses-or-units). Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Undergraduate Special Registration Status (https://registrar.stanford.edu/students/special-registration-and-leaves/special-registration-statuses-undergraduates) or Graduate Special Registration Status (https://registrar.stanford.edu/students/special-registration-and-leaves/special-registration-statuses-graduate-professional). The late study list fee is $200.

January 8 (Mon, 5:00 p.m.) Deadline to submit Leave of Absence for full refund (see undergraduate leaves of absence (http://exploredegrees.stanford.edu/undergraduatedegreesandprograms/leavesandreinstatementtext) and graduate leaves of absence (http://exploredegrees.stanford.edu/graduatedegrees/leavereinstatementtext)). See Tuition and Refund Schedule (https://registrar.stanford.edu/students/tuition-and-fees/tuition-refund-schedule) for a full refund schedule.

January 12 (Fri) GSB course add/drop deadline.

January 15 (Mon) Martin Luther King, Jr., Day (holiday, no classes).

January 26 (Fri, 5:00 p.m.) Final Study List deadline (https://registrar.stanford.edu/students/enrolling-courses/final-study-list-deadline-add-drop-swap-or-adjust-courses-or-units), except GSB. Final day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a 'W' notation will appear on the transcript.

February 19 (Mon) Presidents’ Day (holiday, no classes; Law does hold classes).

February 21 (Wed, 5:00 p.m.) Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.

March 2 (Fri, 5:00 p.m.) Change of grading basis deadline, except GSB.

March 2 (Fri, 5:00 p.m.) Course withdrawal deadline, except GSB, Law, and M.D.

March 2 (Fri, 5:00 p.m.) Application deadline for Winter Quarter degree conferal (http://sites.stanford.edu/sa-registrar/students/graduation).

March 12-18 (Mon-Sun) End-Quarter Period.

March 16 (Fri) Last day of classes (unless class meets on Sat.)

March 16 (Fri) Last opportunity to arrange Incomplete in a course, at last class.

March 16 (Fri, noon) University thesis, D.M.A. final project, Ph.D. dissertation, last day to submit.

March 16 (Fri, 5:00 p.m.) Late application deadline for Winter Quarter degree conferal (http://sites.stanford.edu/sa-registrar/students/graduation) ($50 fee).

March 19-23 (Mon-Fri) End-Quarter examinations.

March 24 (Sat) Undergraduate housing move-out (if departing at end of Winter Quarter); see Residential & Dining Enterprises Calendar (http://studenthousing.stanford.edu/calendar).

March 27 (Tue, 11:59 p.m.) Grades due.

April 5 (Thu) Conferral of degrees, Winter Quarter.

Top of page (http://studentaffairs.stanford.edu/node/1278/edit/#top)
**SPRING QUARTER 2017-18**

**February 11 (Sun)** Axess opens for course enrollment.

**March 23 (Fri)** At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.

**March 31 (Sat)** Undergraduate housing move-in date for Spring Quarter; see Residential & Dining Enterprises Calendar (http://studenthousing.stanford.edu/calendar).

**April 2 (Mon)** First day of quarter; instruction begins for all students.

**April 2 (Mon, 5:00 p.m.)** Preliminary Study List Deadline (https://sites.stanford.edu/sa-registrar/students/enrolling-courses/preliminary-study-list-deadline-courses-or-units). Students must be "at status"; i.e., students must have a study list with sufficient units to meet requirements for their status, whether full-time, 8-9-10 units (graduate students only), or approved Undergraduate Special Registration Status (https://sites.stanford.edu/sa-registrar/students/special-registration-classes-graduate-departmental). Or Graduate Special Registration Status (https://sites.stanford.edu/sa-registrar/students/special-registration-classes-special-registration-classes-undergraduate-graduate-professional). The late study list fee is $200.

**April 2 (Mon, 5:00 p.m.)** Deadline to submit Leave of Absence for full refund (see undergraduate leaves of absence (http://exploredegrees.stanford.edu/undergraduatedegreesandprograms/#leavesandreinstatementtext) and graduate leaves of absence (http://exploredegrees.stanford.edu/graduatedegrees/#leavereinstatementtext)). See Tuition and Refund Schedule (https://registrar.stanford.edu/students/tuition-and-fees/tuition-refund-schedule) for a full refund schedule.

**April 5 (Thurs)** GSB classes begin.

**April 10 (Tues)** GSB course add/drop deadline.

**April 13 (Fri, 5:00 p.m.)** Application deadline for Spring Quarter degree conferral (http://registrar.stanford.edu/students/graduation).

**April 15 (Sun)** Spring Quarter Cardinal Care Waiver Deadline; see the Cardinal Care web site (https://vaden.stanford.edu/insurance).

**April 20 (Fri, 5:00 p.m.)** Final Study List deadline, except GSB (https://registrar.stanford.edu/students/enrolling-courses/final-study-list-deadline-add-drop-swap-or-adjust-courses-or-units). Last day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units. Students may withdraw from a course until the Course Withdrawal deadline and a "W" notation will appear on the transcript.

**May 14 (Mon, 5:00 p.m.)** Term withdrawal deadline; last day to submit Leave of Absence to withdraw from the University with a partial refund.

**May 25 (Fri, 5:00 p.m.)** Change of grading basis deadline, except GSB.

**May 25 (Fri, 5:00 p.m.)** Course withdrawal deadline, except GSB, Law, and M.D.

**May 28 (Mon)** Memorial Day (holiday, no classes).

**June 1-7 (Fri-Thu)** End-Quarter Period.

**June 1 (Fri)** Last day of Law classes. See the full Law School academic calendar (https://www.cdn.law.stanford.edu/wp-content/uploads/2015/04/2017-18-Academic-Calendar.pdf) (pdf).

**June 6 (Wed)** Last day of classes.

**June 6 (Wed)** Last opportunity to arrange Incomplete in a course, at last class.

**June 6 (Wed, noon)** University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.

**June 6 (Wed, 5:00 p.m.)** Late application deadline for Spring Quarter degree conferral (http://sites.stanford.edu/sa-registrar/students/graduation) ($50 fee).

**June 7 (Thu)** Day before finals, no classes.

**June 8-13 (Fri-Wed)** End-Quarter examinations.

**June 13 (Wed, noon)** Grades for GSB graduating students due.

**June 14 (Thu, noon)** Grades for graduating students due.

**June 15 (Fri)** Undergraduate housing move-out date (for all students not involved in Commencement); see Residential & Dining Enterprises Calendar (http://studenthousing.stanford.edu/calendar).

**June 16 (Sat)** Senior Class Day.

**June 16 (Sat)** Baccalaureate Saturday.

**June 16 (Sat)** GSB Diploma Ceremony.

**June 16 (Sat)** Medical School Commencement Ceremony.

**June 17 (Sun)** Commencement. Conferral of degrees, Spring Quarter.

**June 18 (Mon)** Undergraduate Housing move-out date (for graduates and others involved in Commencement with permission); see Residential & Dining Enterprises Calendar (http://studenthousing.stanford.edu/calendar).

**June 19 (Tue, 11:59 p.m.)** Grades for non-graduating students due. Top of page (http://studentaffairs.stanford.edu/node/1278/edit/#top)

**SUMMER QUARTER 2017-18**

**April 8 (Sun)** Axess opens for course enrollment.

**June 15 (Fri)** Summer Quarter Cardinal Care Waiver Deadline; see the Cardinal Care web site (https://vaden.stanford.edu/insurance)

**June 15 (Fri)** At-status enrollment deadline in order to receive stipend or financial aid refund within the first week of term.

**June 25 (Mon)** First day of quarter; instruction begins.

**June 25 (Mon, 5:00 p.m.)** Preliminary Study List Deadline (https://registrar.stanford.edu/students/enrolling-courses/preliminary-study-list-deadline-courses-or-units).

**June 25 (Mon)** Deadline to submit Leave of Absence for full refund (see undergraduate leaves of absence (http://exploredegrees.stanford.edu/undergraduatedegreesandprograms/#leavesandreinstatementtext) and graduate leaves of absence (http://exploredegrees.stanford.edu/graduatedegrees/#leavereinstatementtext)). See Tuition and Refund Schedule (https://registrar.stanford.edu/students/tuition-and-fees/tuition-refund-schedule) for a full refund schedule.

**July 4 (Wed)** Independence Day (holiday, no classes).

**July 6 (Fri, 5:00 p.m.)** Final Study List deadline (https://registrar.stanford.edu/students/enrolling-courses/final-study-list-deadline-courses-or-units). Final day to add or drop a class; last day to adjust units on a variable-unit course. Last day for tuition reassessment for dropped courses or units.

**August 3 (Fri, 5:00 p.m.)** Course withdrawal deadline.

**August 3 (Fri, 5:00 p.m.)** Application deadline for Summer Quarter degree conferral (http://registrar.stanford.edu/students/graduation).

**August 11-16 (Sat-Thu)** End-Quarter Period.

**August 16 (Thu)** Last day of classes.

**August 16 (Thu)** Last opportunity to arrange Incomplete in a course, at last class.

**August 17-18 (Fri-Sat)** End-Quarter examinations.

**August 21 (Tue, 11:59 p.m.)** Grades due.

**August 31 (Fri, noon)** University thesis, D.M.A. final project, or Ph.D. dissertation, last day to submit.

**August 31 (Fri, 5:00 p.m.)** Late application deadline for Summer Quarter degree conferral (http://registrar.stanford.edu/students/graduation) ($50 fee).

**September 27 (Thu)** Conferral of degrees, Summer Quarter. Top of page (http://studentaffairs.stanford.edu/node/1278/edit/#top)
2018-19 First Day of Classes and End of Term

- Autumn 2018-19: September 24 and December 14
- Winter 2018-19: January 7 and March 22
- Spring 2018-19: April 1 and June 12 (Commencement June 16)
- Summer 2018-19: June 24 and August 17
STANFORD'S MISSION

The Stanford University Founding Grant (https://wasc.stanford.edu/system/files/FoundingGrant_2.pdf) (pdf), dated November 11, 1885, outlines the founding principles of the University. The Founding Grant describes the "Nature, Object, and Purposes of the Institution" founded by Leland Stanford and Jane Lathrop Stanford in these terms:

Its nature, that of a university with such seminaries of learning as shall make it of the highest grade, including mechanical institutes, museums, galleries of art, laboratories, and conservatories, together with all things necessary for the study of agriculture in all its branches, and for mechanical training, and the studies and exercises directed to the cultivation and enlargement of the mind;

Its object, to qualify its students for personal success, and direct usefulness in life;

And its purposes, to promote the public welfare by exercising an influence in behalf of humanity and civilization, teaching the blessings of liberty regulated by law, and inculcating love and reverence for the great principles of government as derived from the inalienable rights of man to life, liberty, and the pursuit of happiness.

Each of Stanford’s seven schools has its own mission statement and those can be found by following the links below:

- School of Earth, Energy and Environmental Sciences Mission Statement (http://pangea.stanford.edu/about)
- Graduate School of Business Mission Statement (http://www.gsb.stanford.edu/about/mission.html)
- School of Humanities and Sciences Mission Statement (http://www.stanford.edu/dept/humscsi/external/about)
- School of Engineering Mission Statement (http://soe.stanford.edu/about)
- School of Medicine Mission Statement (http://med.stanford.edu/about/mission.html)
- Graduate School of Education Mission Statement (http://ed.stanford.edu/suse/aboutsuse/mission.html)

A Brief History of Stanford

On October 1, 1891, more than 400 enthusiastic young men and women were on hand for opening day ceremonies at Leland Stanford Junior University. They came from all over: many from California, some who followed professors hired from other colleges and universities, and some simply seeking adventure in the West. They came to seize a special opportunity, to be part of the pioneer class in a brand new university. They stayed to help turn an ambitious dream into a thriving reality. As a pioneer faculty member recalled, "Hope was in every heart, and the presiding spirit of freedom prompted us to dare greatly."

For Leland and Jane Stanford on that day, the University was the realization of a dream and a fitting tribute to the memory of their only son, who died of typhoid fever weeks before his 16th birthday, at an age when many young men and women were planning their college education.

From the beginning, it was clear that Stanford would be different. It was coeducational at a time when single-sex colleges were the norm. It was non-sectarian when most private colleges were still affiliated with a church. And it offered a broad, flexible program of study while most schools insisted on a rigid curriculum of classical studies. Though there were many difficulties during the first months (housing was inadequate, microscopes and books were late in arriving from the East), the first year foretold greatness. As Jane Stanford wrote in the summer of 1892, “Even our fondest hopes have been realized.”

What manner of people were this man and this woman who had the intelligence, the means, the faith, and the daring to plan a major university in Pacific soil, far from the nation’s center of culture?

Leland and Jane Stanford

Although he was trained as a lawyer, Leland Stanford came to California in 1852 to join his five brothers in their mercantile business in the gold fields; Jane Stanford followed in 1855. They established large-scale operations in Sacramento, where Mr. Stanford became a leading figure in California business and politics. One of the "Big Four" who built the western link of the first transcontinental railroad, he was elected Governor of California and later United States Senator. One of the founders of the Republican Party in California, he was an ardent follower of Abraham Lincoln and is credited with keeping California in the Union during the Civil War.

The Case for a Liberal Education

Despite the enormous success they achieved in their lives, Governor and Mrs. Stanford had come from families of modest means and rose to prominence and wealth through a life of hard work. So it was natural that their first thoughts were to establish an institution where young men and women could “grapple successfully with the practicalities of life.” As their thoughts matured, however, these ideas of “practical education” enlarged to the concept of producing cultured and useful citizens who were well prepared for professional success. In a statement of the case for liberal education that was remarkable for its time, Leland Stanford wrote, "I attach great importance to general literature for the enlargement of the mind and for giving business capacity. I think I have noticed that technically educated boys do not make the most successful businessmen. The imagination needs to be cultivated and developed to assure success in life. A man will never construct anything he cannot conceive."

Stanford Lands and Architecture

The campus occupies what was once Leland Stanford’s Palo Alto Stock Farm and the favorite residence of the Stanford family. The Stanfords purchased an existing estate in 1876 and later acquired much of the land in the local watershed for their stock farm, orchards, and vineyards.

The name of the farm came from the tree El Palo Alto, a coast redwood (Sequoia sempervirens), that still stands near the northwest corner of the property on the edge of San Francisquito Creek. Many years ago, one of the winter floods that periodically rushed down the arroyo tore off one of its trunk twines, but half of the venerable old tree lives on, a gaunt and time-scarred monument. Named in 1769 by Spanish explorers, El Palo Alto has been the University’s symbol and the centerpiece of its official seal.

The Stanfords gave their farm to the University in the Founding Grant of 1885. They personally financed the entire cost of the construction and operation of the University until 1903, when surviving founder Jane Stanford, who performed heroically in keeping the University functioning during difficult times following Leland Senior’s death in 1893, turned over control to the Board of Trustees. The founding gift has been estimated at $25 million, not including the land and buildings.

The general concept for the University grounds and buildings was conceived by Frederick Law Olmsted, the designer of Central Park in New York. A brilliant young Boston architect, Charles Allerton Coolidge, further developed the concept in the style of his late mentor, Henry Hobson Richardson. The style, called Richardsonian Romanesque, is a blend of Romanesque and Mission Revival architecture. It is characterized by rectilinear sandstone buildings joined by covered arcades formed of
successive half-circle arches, the latter supported by short columns with decorated capitals.

More than one hundred years later, the University still enjoys 8,180 acres (almost 13 square miles) of grassy fields, eucalyptus groves, and rolling hills that were the Stanfords' generous legacy, as well as the Quadrangle of "long corridors with their stately pillars" at the center of campus. It is still true, as the philosopher William James said, during his stint as a visiting professor, that the climate is "so friendly . . . that every morning wakes one fresh for new amounts of work."

Current Perspectives

In other ways, the University has changed tremendously on its way to recognition as one of the world's great universities. At the hub of a vital and diverse Bay Area, Stanford is less than an hour's drive or Caltrain trip south of San Francisco and just a few miles north of Silicon Valley, an area dotted with computer and high technology firms largely spawned by the University's faculty and graduates. On campus, students and faculty enjoy new libraries, modern laboratories, sports facilities, and comfortable residences. Contemporary sculpture, as well as pieces from the Iris and B. Gerald Cantor Center for Visual Arts (http://museum.stanford.edu) at Stanford University's extensive collection of sculpture by Auguste Rodin, can be found throughout the campus, providing unexpected pleasures at many turns.

The Cantor Center opened in January 1999. The center includes the historic Leland Stanford Junior Museum building and the Rodin Sculpture Garden. Next door is the Anderson Collection at Stanford University, which houses one of the nation's finest assemblies of modern American art. At the Stanford University Medical Center (http://stanfordmedicine.org), world-renowned for its research, teaching, and patient care, scientists and physicians are searching for answers to fundamental questions about health and disease. Ninety miles down the coast, at Stanford's Hopkins Marine Station (https://hopkinsmarinestation.stanford.edu) on the Monterey Bay, scientists are working to better understand the mechanisms of evolution and ecological systems.

The University is organized into seven schools: Earth, Energy and Environmental Sciences; Education; Engineering; the Graduate School of Business; Humanities and Sciences; Law; and Medicine. In addition, there are more than 30 interdisciplinary centers, programs, and research laboratories (p. 842) including: the Hoover Institution on War, Revolution and Peace (http://www.hoover.org); the Freeman Spogli Institute for International Studies (http://fsi.stanford.edu); the Woods Institute for the Environment (http://woods.stanford.edu); the SLAC National Accelerator Laboratory (http://www.slac.stanford.edu); and the Stanford Program for Bioengineering, Biomedicine, and Biosciences (Bio-X) (http://biox.stanford.edu), where faculty from many fields bring different perspectives to bear on issues and problems. Stanford's Bing Overseas Studies Program (http://bosp.stanford.edu) offers undergraduates in all fields remarkable opportunities for study abroad, with campuses in Australia, Beijing, Berlin, Cape Town, Florence, Kyoto, Madrid, Oxford, Paris, and Santiago.

Looking Ahead

In her address to the Board of Trustees in July 1904, Jane Stanford said, "Let us not be afraid to outgrow old thoughts and ways, and dare to think on new lines as to the future of the work under our care."

Stanford's 11th president, Marc Tessier-Lavigne, echoed these thoughts in his inaugural address in 2016: "When I reflect on Stanford's 125-year history, I see a University that has pressed forward through thick and thin, gaining in stature as a leader in education and scholarship, to make increasingly important contributions to society and to human well-being. Thanks to over a century of inspired leadership, including by the distinguished presidents emeriti here today, Stanford has become the "University of high degree" its founders envisioned. Stanford's preeminence derives from its bedrock dedication to fostering education, research, and creativity for the benefit of humanity. But I believe it also stems from its optimism, its resilience, and its courage to evolve."
UNIVERSITY GOVERNANCE AND ORGANIZATION

Web Sites: http://www.stanford.edu/about/administration/ and http://facts.stanford.edu/administration/

Stanford University is a trust with corporate powers under the laws of the State of California. The University is a tax-exempt entity under section 501(c)3 of the Internal Revenue Code. Under the provisions of the Founding Grant, the Board of Trustees (with a maximum membership of 38) is custodian of the endowment and all the properties of Stanford University. The board administers the invested funds, sets the annual budget and determines policies for operation and control of the university. Among the powers given to the trustees by the Founding Grant is the power to appoint a president. The board delegates broad authority to the president to operate the university and to the faculty on certain academic matters. The formal legal name is “The Board of Trustees of the Leland Stanford Junior University.”

Accreditation

Stanford University is accredited by the Accrediting Commission of Senior Colleges and Universities of the Western Association of Schools and Colleges. (http://directory.wascsenior.org/stanford-university/
#zoom=15&lat=374296&lon=12217294&layers=TF0BT)

Executive Officers

Stanford Administration
• Marc Tessier-Lavigne, President
• Persis Drell, Provost
• David Demarest, Vice President for Public Affairs
• Harry Elam, Vice President for the Arts
• Lisa Lapin, Vice President for University Communications
• Randall S. Livingston, Vice President for Business Affairs and Chief Financial Officer
• William J. Madia, Vice President, SLAC National Accelerator Laboratory
• Robert Reidy, Vice President for Land, Buildings and Real Estate
• Martin Shell, Vice President for Development
• Howard Wolf, Vice President for Alumni Affairs and President, Stanford Alumni Association
• Elizabeth Zacharias, Vice President for Human Resources
• Debra Zumwalt, Vice President and General Counsel

Senior Cabinet
• Ann Arvin, Vice Provost and Dean of Research
• Jennifer Widom, Dean, School of Engineering
• Harry Elam, Senior Vice Provost for Education, Vice Provost for Undergraduate Education
• Thomas Gilligan, Director, Hoover Institution on War, Revolution and Peace
• Stephan Graham, Dean, School of Earth, Energy & Environmental Sciences
• Patricia Gumport, Vice Provost for Graduate Education
• Chi-Chang Kao, Director, SLAC National Accelerator Laboratory
• Jon Levin, Dean, Graduate School of Business
• M. Elizabeth Magill, Dean, School of Law
• Lloyd Minor, Dean, School of Medicine
• Richard Saller, Dean, School of Humanities & Sciences
• Dan Schwartz, Dean, Graduate School of Education

The Board of Trustees

Powers and Duties

The Board of Trustees is custodian of the endowment and all properties of the University. The Board administers the invested funds, sets the annual budget, and determines policies for the operation and control of the University. The powers and duties of the Board of Trustees derive from the Founding Grant, amendments, legislation, and court decrees. In addition, the Board operates under its own bylaws and a series of resolutions on major policy.

Membership

Board membership is set at 38, including the President of the University who serves ex officio and with vote. Trustees serve a five-year term and are eligible for appointment to one additional five-year term. At the conclusion of that term, a Trustee is not eligible for reelection until after a lapse of one year. Eight of the Trustees are elected or appointed in accordance with the Rules Governing the Election or Appointment of Alumni Nominated Trustees. They serve a five-year term.

Officers of the Board

The officers of the board are a chair, one or more vice chairs, a secretary, and an associate secretary. Officers are elected to one-year terms at the annual meeting in June, with the exception of the chair, who serves a two-year term. Their terms of office begin July 1.

Committees

Standing committees of the Board are Audit, Compliance and Risk; Development; Finance; Land and Buildings; Student, Alumni and External Affairs; and Trusteeship. Special committees include Athletics, Compensation, and Investment Responsibility.

Meetings

The Board generally meets five times each year.

Members of the Board of Trustees as of July 2, 2018

• Felix J. Baker, Co-Founder and Managing Partner, Baker Brothers Investments, New York, NY
• Mary T. Barra, Chief Executive Officer, General Motors, Detroit, MI
• Robert M. Bass, President, Keystone Group LP, Fort Worth, TX
• Michelle R. Clayman, Managing Partner & Chief Investment Officer, New Amsterdam Partners LLC, New York, NY
• Bret E. Comolli, Chairman, Asurion Corporation, Atherton, CA
• RoAnn Costin, President, Wilderness Point Investments, Cambridge, MA
• Dipanjan Deb, CEO & Co-Founder, Francisco Partners, San Francisco, CA
• Henry A. Fernandez, Chairman and CEO, MSCI Inc., New York, NY
• Angela S. Filo, Co-Founder, Yellow Chair Foundation, Palo Alto, CA
• Sakurako D. Fisher, San Francisco, CA
• Bradley A. Geier, Co-Managing Partner, Merlone Geier Partners, San Diego, CA
• James D. Halper, Senior Advisor, Leonard Green & Partners, Los Angeles, CA
• Christine U. Hazy, Co-Founder and Managing Director, Sketch Foundation, Los Angeles, CA
• Ronald B. Johnson, Founder & CEO, Enjoy, Menlo Park, CA
• Tonia G. Karr, San Francisco, CA
• Carol C. Lam, Sr. Vice President; Deputy General Counsel, Qualcomm, Inc., San Diego, CA
• Christy MacLear, New Canaan, CT
University Governance and Organization

- Kenneth E. Olivier, Chairman Emeritus, Dodge and Cox, San Francisco, CA
- Carrie W. Penner, Chair of the Board, Walton Family Foundation, Aspen, CO
- Ruth M. Porat, Chief Financial Officer, Alphabet Inc. and Google Inc., Mountain View, CA
- Laurene Powell Jobs, Founder/Chair, Emerson Collective, Palo Alto, CA
- Jeffrey S. Raikes, Co-Founder, The Raikes Foundation, Seattle, WA
- Mindy B. Rogers, Atherton, CA
- Victoria B. Rogers, President, Rose Hills Foundation, Pasadena, CA
- Kavitha Ram Shiriram, Founder, Sherpalo Ventures, Menlo Park, CA
- Ronald P. Spero, Founding Partner, Freeman Spero & Co., Los Angeles, CA
- Srinija Srinivasan, Palo Alto, CA
- Jeffrey E. Stone, Chairman Emeritus and Senior Partner, McDermott Will & Emery LLP, Chicago IL
- Gene T Sykes, Global Co-Head of M&A & Chairman, Goldman Sachs Group Inc., Los Angeles, CA
- Marc Tessier-Lavigne, President, Stanford University, Stanford, CA
- Jerry Yang, AME Cloud Ventures, Palo Alto, CA

The President

The Founding Grant prescribes that the Board of Trustees shall appoint the President of the University and that the Board shall give to the President the following powers:

- To prescribe the duties of the professors and teachers.
- To prescribe and enforce the course of study and the mode and manner of teaching.
- Such other powers as will enable the President to control the educational part of the University to such an extent that the President may justly be held responsible for the course of study therein and for the good conduct and capacity of the professors and teachers.

The President is also responsible for the management of financial and business affairs of the University, including operation of the physical plant.

The President is responsible for the safety of the campus and may take reasonable steps to protect the University including, but not limited to, barring people from campus who disrupt the normal business operations of the University or who present a threat to the safety of the University community. In extraordinary circumstances, the President may permanently discontinue students who present a threat to the health and safety of the University community.

The President appoints the following, subject to confirmation by the Board: Provost, Vice President for Business Affairs and Chief Financial Officer, Chief Executive Officer of Stanford Management Company, Vice President for Alumni Affairs and President of Stanford Alumni Association, Vice President for Development, Vice President for Public Affairs, Vice President and General Counsel, Vice President for the SLAC National Accelerator Laboratory, and Vice President for Land, Buildings, and Real Estate.

For additional information, see the Office of the President web (http://www.stanford.edu/dept/president) site.

Committees and Panels Appointed by the President

University Committees are appointed by and are primarily responsible to the President. Such committees deal with matters on which the responsibility for recommendation or action is clearly diffused among different constituencies of the University. In accordance with the Report on the Committee Structure of the University, Academic Council members are appointed to University Committees on nomination of the Senate Committee on Committees and student members on nomination of the Associated Students of Stanford University (ASSU) Committee on Nominations. The President takes the initiative in the appointment of staff members to such committees. Although immediately responsible to the President, University Committees may be called upon to report to the Senate of the Academic Council or the ASSU. Charges to such committees are set by the President on recommendation of the Committee on Committees and others. There are five University Committees, as follows:

- Advisory Panel on Investment Responsibility and Licensing (APIR-L)
- Committee on Athletics, Physical Education, and Recreation (C-APER)
- Committee on Environmental Health and Safety (C-EH&S)
- Committee on Faculty Staff Human Resources (C-FSHR)
- Panel on Outdoor Art (P-OA)

Additionally there are eleven standing administrative panels which are appointed by the Vice Provost and Dean of Research, and which report through him/her to the President:

- Administrative Panel on Biosafety
- Administrative Panel on Human Subjects in Medical Research-01
- Administrative Panel on Human Subjects in Medical Research-03
- Administrative Panel on Human Subjects in Medical Research-04
- Administrative Panel on Human Subjects in Medical Research-05
- Administrative Panel on Human Subjects in Medical Research-06
- Administrative Panel on Human Subjects in Medical Research-07
- Administrative Panel on Human Subjects in Medical Research-08
- Administrative Panel on Human Subjects in Non-Medical Research-02
- Administrative Panel on Laboratory Animal Care
- Administrative Panel on Radiological Safety

The Provost

The Provost, as the chief academic and budget officer, administers the academic program (instruction and research in schools and other academic units) and University services in support of the academic program (including budgeting and planning, land and buildings, libraries and information resources, and student affairs). In the absence or inability of the President to act, the Provost becomes the Acting President of the University. The Provost shares with the President conduct of the University’s relations with other educational institutions, groups, and associations.

Schools of the University

The program of instruction in the University is organized into seven schools:

- Graduate School of Business
- School of Earth, Energy and Environmental Sciences
- Graduate School of Education
- School of Engineering
- School of Humanities and Sciences
- Stanford Law School
- School of Medicine

The deans of the schools report to the Provost.
The Academic Council

Stanford Academic Council (http://academiccouncil.stanford.edu) web site.

According to the Articles of Organization of the Faculty, originally adopted by the Board of Trustees in 1904 and revised in 1977, the powers and authority of the faculty are vested in the Academic Council consisting of:

1. the President of the University
2. tenure-line faculty: Assistant, Associate, and Full Professor
3. nontenure-line faculty: Associate and Full Professor followed by the parenthetical notation (Teaching), (Performance), (Applied Research), or (Clinical)
4. nontenure-line research faculty: Assistant Professor (Research), Associate Professor (Research), Professor (Research)
5. Senior Fellows in specified policy centers and institutes
6. certain specified officers of academic administration.

In the Spring of 1968, the Academic Council approved the charter for a Senate to be composed of 55 representatives elected by the Hare System of Proportional Representation and, as ex officio nonvoting members, deans of the academic schools and certain major officers of academic administration.

In the allocation of representation, each school constitutes a major constituency. The Senate may create from time to time other major constituencies as conditions warrant. Approximately one-half of the representatives are allocated to constituencies on the basis of the number of students in those constituencies and the remainder on the basis of the number of members of the Academic Council from each constituency.

Committees of the Academic Council

Committees of the Academic Council are created by and responsible to the Senate of the Academic Council and are appointed by the Committee on Committees of the Senate. Such committees deal with academic policy matters on which the primary responsibility for action and decision lies with the Academic Council or, by delegation, the Senate. Pursuant to the Senate’s acceptance on September 25, 1969 of the Report from the Committee on Committees on the Committee Structure of the University and subsequent Senate action, the Senate has established seven standing Committees of the Academic Council, as follows:

- Committee on Academic Computing and Information Systems (C-ACIS)
- Committee on Graduate Studies (C-GS)
- Committee on Libraries (C-Lib)
- Committee on Research (C-Res)
- Committee on Review of Undergraduate Majors (C-RUM)
- Committee on Undergraduate Admissions and Financial Aid (C-UAFA)
- Committee on Undergraduate Standards and Policy (C-USP)

The Senate has also created a Planning and Policy Board of the Senate to consider long-range strategic issues of concern to the faculty. Information regarding charges to these committees is available from the Office of the Academic Secretary to the University.

Associated Students of Stanford University (ASSU)

Web Site: http://assu.stanford.edu

All registered undergraduates and graduate students are members of the ASSU. They are governed by the ASSU Constitution and Bylaws, which was last revised and approved by student vote in April 2013.

Executive

The President and Vice President serve as the chief executives and representatives for the Association. The Financial Manager acts as business manager of the ASSU, CEO of Stanford Student Enterprises (SSE), and controller of the Students’ Organizations Fund in which ASSU and student organization funds are deposited.

Legislative

There are two legislative bodies, an Undergraduate Senate and a Graduate Student Council, that work together to determine the Association’s budgetary, financial, investment, business, and operating policies. In addition, each entity provides funding for student organizations, participates in recommending student appointments to University Committees and advocates on behalf of its constituents. Each body has 15 elected representatives and an elected chair. Both meet regularly to conduct Association business and discuss and act on issues pertinent to student life at Stanford.
UNIVERSITY REQUIREMENTS

Nondiscrimination Policy
Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford's Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford’s Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this web site: https://www2.ed.gov/about/offices/list/ocr/complaintintro.html

University Communication with Students
Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding.
ADMISSION AND FINANCIAL AID

Nondiscrimination Policy
Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford’s Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford’s Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Laguna Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email). Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this web site: https://www2.ed.gov/about/offices/list/ocr/complaintintro.html

Visas
In order to register as students, Stanford University requires that all those who are not U.S. citizens or U.S. registered permanent residents obtain and maintain an appropriate visa status for their stay in the United States. The types of student visas sponsored by Stanford include the following:

1. Student Visa (F-1), obtained with an I-20 Certificate of Eligibility issued by Stanford University. The graduate student on an F-1 visa must enroll in a full course of study. The accompanying spouse or child enters on an F-2 visa. F-2 visa holders may not hold employment or engage in business under any circumstances. The F-2 spouse of an F-1 student may not engage in full-time study, and the F-2 child may only engage if the study is in an elementary or secondary school (kindergarten through twelfth grade). The F-2 spouse and child may engage in study that is avocational or recreational in nature.

2. Exchange Visitor Visa (J-1), obtained with a DS-2019 Certificate of Eligibility issued by Stanford University or a sponsoring agency. This visa is required for graduate students sponsored by certain agencies, foundations, and governments. In some cases, exchange visitors must leave the United States at the conclusion of their programs, may not change to non-student visa status, and may not apply for permanent residency in the United States until they have returned to their home countries for at least two years. The accompanying spouse or child of an exchange visitor enters on a J-2 visa and may, in some cases, obtain permission to work. J-2 dependents can apply for an Employment Authorization document from U.S. Citizenship and Immigration Services in order to be employed in the U.S. There is no regulatory restriction on study for J-2 dependents.

The Certificate of Eligibility (I-20/DS-2019) is issued to an admitted student after receipt of certification of adequate financial support. An F-1 student transferring from another U.S. school must obtain a new I-20 document from Stanford and complete a transfer process at the Bechtel International Center no later than 30 days after the effective date of the transfer. A J-1 student transferring from another U.S. school must obtain a new DS-2019 document from Stanford and complete a transfer process at the Bechtel International Center no later than 15 days after the effective date of the transfer.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

Rescission
By applying for admission to Stanford University academic programs, applicants certify that the information they provide in their applications is complete, accurate, and their own work. As also noted in the application materials, Stanford reserves the right to withdraw an offer of admission under certain circumstances, including (but not limited to):

1. if there is a significant drop in academic performance, a failure to graduate (in the applicant’s current program), or a failure to satisfy a prerequisite or condition of admission;
2. if there has been a misrepresentation in the application process or a breach of any of the terms of the application process; or
3. if the University learns that an individual has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

Indeed (and for example), Stanford may rescind an individual's admission at any time, including after attendance and after degree conferral, if it determines, for example, that an individual has been admitted to Stanford on the basis of having provided false information; has withheld requested information; or has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

The University reserves the right to require individuals to provide additional information (and/or authorization for the release of information) about any such matter, and to place a hold on registration and/or the conferral of a degree during the investigation into any such matter. Stanford also reserves the right in perpetuity to investigate the authenticity, accuracy, and authorship of materials submitted, information provided, and assertions made in connection with the application.

Similarly, Stanford University awards degrees on the basis of successful completion of all program requirements in accordance with Stanford's policies and procedures. The University reserves the right to rescind any degree or honors designation (even after conferral) if the program requirements have not been so completed, and to place a hold on issuing a degree during the investigation into any such matter.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant), Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

Holds
A hold can be placed on the registration of any student with unmet financial or other University obligations; in addition to being unable to register for and take classes, among other limitations, such a student cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released. As a condition of attending Stanford, students accept this provision.
Undergraduate Admission
Stanford's undergraduate community is drawn from throughout the United States and the world. It includes students whose abilities, intellectual interests, and personal qualities allow them to benefit from and contribute to the University's wide range of teaching and research programs in the humanities, natural sciences, social sciences, and engineering. The University admits students who derive pleasure from learning for its own sake; who exhibit energy, creativity, and curiosity; and who have distinguished themselves in and out of the classroom.

Stanford welcomes a diverse community that cuts across many dimensions. The University does not use quotas of any kind in its admission process: it does not favor particular schools or types of schools; nor any geographic region, nor does it have any racial, religious, ethnic, or gender-related quotas. The University believes that a student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experiences, skills, and interests is essential to the educational process. Applications are encouraged from those who would take the initiative and responsibility for their own education and who would provide additional dimensions to the University and its programs.

In order to preserve the residential character of the University and to maintain a favorable student-faculty ratio, Stanford has a limited undergraduate enrollment. The anticipated size of the freshman class is approximately 1,600-1,700 students who are admitted for Autumn Quarter enrollment. Approximately 20-40 transfer students, entering either the sophomore or junior class, are also typically admitted for Autumn enrollment if space allows. Each year, the University receives many more applications from qualified students than there are places available.

Stanford is committed to meeting the University-computed financial need of each admitted student, and admission decisions are made without regard to the applicant’s financial status, except in the case of international students who are neither U.S. citizens nor U.S. registered permanent residents.

Application procedures, requirements, and deadlines vary from year to year. See the Undergraduate Admission (http://admission.stanford.edu) web site for the most recent information and to begin an application online; or call the Office of Undergraduate Admission at (650) 723-2091.

Nonmatriculated Study (Undergraduate)
Permission to enroll at Stanford as a nonmatriculated student during Autumn, Winter, and Spring quarters is not routinely approved except under extenuating circumstances. Nonmatriculated students authorized to enroll at Stanford University are not admitted to any Stanford degree program and are permitted to register for a specific period, usually one, two, or three quarters. Financial assistance from Stanford University is not available. Permission to enroll as a nonmatriculated student does not imply subsequent admission as a matriculated student.

Nonmatriculated status is a privilege and not a right. The University reserves the right, at its discretion, to withhold registration from, or require withdrawal for the program by, any student or applicant. In addition, nonmatriculated status may be revoked at the University's discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

Students interested in nonmatriculated status during the Autumn, Winter, and Spring quarters should contact the Office of the University Registrar, not the Office of Undergraduate Admission. Note: newly admitted Stanford students (that is, those admitted to a Stanford degree program) are not eligible to enroll for nonmatriculated study for any quarter, except with the permission of the Vice Provost for Undergraduate Education (or his or her designee) under extenuating circumstances.

High School Nonmatriculated Students
Local high school students are eligible to be considered to attend Stanford as nonmatriculated students on a limited basis when they have exhausted all of the courses in a given discipline offered by their high school. Nonmatriculated high school students are permitted to enroll in one course per quarter and are required to pay the applicable tuition. Permission from the academic department and the University Registrar is required. The Language Center does not allow high school students to enroll in language courses during the academic year. High school students who are accepted to participate in High School Summer College may enroll in language courses as part of Summer Session, space permitting.

Summer Session
Students wishing to enroll as nonmatriculated students during Summer Quarter should contact the Summer Session Office (http://summer.stanford.edu) for more information about the Summer Visitor Program (http://summer.stanford.edu/programs/undergraduate-graduate-students-from-other-universities). Admission to the Summer Visitor Program does not imply regular admission to Stanford for subsequent quarters or to one of Stanford’s regular degree programs.

Graduate Admission
Matriculated Study (Graduate Students)
Applicants from colleges and universities of recognized standing who hold a U.S. bachelor's degree or its equivalent are eligible to be considered for admission for graduate study. Details regarding degrees offered in specific departments are given on the Graduate Admissions (http://gradadmissions.stanford.edu) web site. The number of applicants who can be admitted for work in a particular field of study at any time is limited by the facilities and programs of the school or department and by the number of matriculated students who continue their work in that field.

As with its undergraduate program, Stanford believes that a graduate student body that is both highly qualified and diverse in terms of culture, socioeconomic status, race, ethnicity, gender, work and life experience, skills, and interests is essential to the graduate educational process. It particularly welcomes applications from African Americans, Latinos, and Native Americans, as well as from others whose backgrounds and experiences would add additional dimensions to the University's educational programs.

Honors Cooperative Program
The Honors Cooperative Program (HCP) is a part-time graduate program offered by Stanford University. It allows working professionals, who may be eligible for tuition support through their employer, an opportunity to earn a graduate degree in any of the engineering programs, applied physics, statistics, or biomedical informatics, on a part-time basis.

Prospective HCP students apply to the department in which they would like to pursue a graduate degree through the normal graduate admissions process, and compete with all other applicants for admission to the program. Once admitted, HCP students arrange their part-time status and tuition payment options through the Stanford Center for Professional Development (SCPD). Courses are delivered online and broadcast locally. HCP students are also welcome to attend certain classes on campus, and some on-campus attendance may be required depending on the degree track.

To participate, HCP students must have the support of their employer as a participating company of the Stanford Center for Professional Development. For more information, see the Stanford Center for
Professional Development (SCPD) (http://scpd.stanford.edu) web site, or phone (650) 725-3000.

The Coterminal Degree Program

This program permits matriculated Stanford undergraduates to study for a Master of Arts (M.A.) or Master of Science (M.S.) degree while completing their bachelor’s degree(s) in the same or a different department. Application policies and procedures are established by each master’s department or program. Interested Stanford undergraduates should directly contact the department or program in which they wish to pursue a master’s degree and must adhere to the application deadlines. Stanford undergraduates may also choose to apply to Stanford graduate degree programs through the standard graduate admissions process as described in the Graduate Admission (p. 16) section of this bulletin. Such applicants are not coterminal students and coterminal policies do not apply. For more information, see the Coterminal Degrees (p. 46) section of this bulletin.

Application Process

Specific information regarding test requirements, other application procedures and requirements, and closing dates for filing applications and supporting credentials for admission and financial aid are listed on the Graduate Admissions (http://gradadmissions.stanford.edu) web site.

Graduate fellowship funds and assistantships are generally committed in March for the entire period comprising Autumn, Winter, and Spring quarters of the next academic year. Awards are seldom made to students who enter the University in Winter, Spring, and Summer quarters; such applicants must meet the same financial aid application requirements as those entering in Autumn Quarter.

Applications are to be submitted electronically for graduate programs in the schools of Business, Earth Sciences, Education, Engineering, Humanities and Sciences, and the Biosciences (non-M.D. programs in Medicine). Application instructions may be found at the Graduate Admissions (http://gradadmissions.stanford.edu) web site.

For admission to the following programs, apply directly via the web sites below.

Business

Admission information is available for the M.B.A., M.Sx Program, and Ph.D. programs at the Stanford Graduate School of Business Admissions (http://www.gsb.stanford.edu/admissions) web site. All applications must be submitted electronically.

Law

Applicants for the JD degree should see the Law School Admissions (http://www.law.stanford.edu/program/degrees/jd/jd_application) web site. Applicants for LLM, JSM, JSD, and MLS degrees can find instructions at the Advanced Degree Programs (http://www.law.stanford.edu/program/degrees/advanced/application) web site. These applications are submitted to the Director of Admissions, School of Law, Stanford University, Stanford, CA 94305-8610. The Law School Admissions Test is required.

M.D. Program

Applicants should see the M.D. admissions (http://med.stanford.edu/md/admissions) web site or, for additional information about the M.D. program, write to Stanford University School of Medicine, Office of M.D. Admissions, 251 Campus Drive, MSOB X3C01, Stanford, CA 94305-5404. The American Medical College Application Service (AMCAS) application is available at the AMCAS (http://aamc.org) web site. Applications and transcripts must be received by AMCAS by October 15. The Medical College Admissions Test is required.

Rescission

By applying for admission to Stanford University academic programs, applicants certify that the information they provide in their applications is complete, accurate, and their own work. As also noted in the application materials, Stanford reserves the right to withdraw an offer of admission under certain circumstances, including (but not limited to):

1. if there is a significant drop in academic performance, a failure to graduate (in the applicant’s current program), or a failure to satisfy a prerequisite or condition of admission;
2. if there has been a misrepresentation in the application process or a breach of any of the terms of the application process; or
3. if the University learns that an individual has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

Indeed (and for example), Stanford may rescind an individual’s admission at any time, including after attendance and after degree conferred, if it determines, for example, that an individual has been admitted to Stanford on the basis of having provided false information; has withheld requested information; or has engaged in behavior prior to the first day of enrolled Stanford attendance that indicates a serious lack of judgment or integrity.

The University reserves the right to require individuals to provide additional information (and/or authorization for the release of information) about any such matter, and to place a hold on registration and/or the conferment of a degree during the investigation into any such matter. Stanford also reserves the right in perpetuity to investigate the authenticity, accuracy, and authorship of materials submitted, information provided, and assertions made in connection with the application.

Similarly, Stanford University awards degrees on the basis of successful completion of all program requirements in accordance with Stanford’s policies and procedures. The University reserves the right to rescind any degree or honors designation (even after conferment) if the program requirements have not been so completed, and to place a hold on issuing a degree during the investigation into any such matter.

For academic programs that require work authorization in the United States (such as to serve as a teaching assistant or research assistant). Stanford University reserves the right to rescind the admission and terminate the student status of any student who fails to timely obtain and maintain that work authorization status.

Holds

A hold can be placed on the registration of any student with unmet financial or other University obligations; in addition to being unable to register for and take classes, among other limitations, such a student cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released. As a condition of attending Stanford, students accept this provision.

Nonmatriculated Study (Graduate Students)

Eligibility for consideration for nonmatriculated enrollment is restricted to two groups of applicants:

1. Stanford alumni who wish to return to Stanford to take courses that are prerequisites for Medical School admission, such as undergraduate Biology or Chemistry courses, are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, and three letters of recommendation are required. The decision to admit or deny is made by the Director of
Admission and Financial Aid

Graduate Admissions on the basis of relevant factors, including at least a 3.0 GPA and positive letters of recommendation.

a. Applicants who graduated from other universities are not eligible to take the prerequisites for Medical School at Stanford.

2. Individuals who hold a bachelor’s degree or equivalent and wish to take courses in a specific department that allows non-degree students are eligible to apply for nonmatriculated status. An application form, application fee, statement of purpose, original transcripts, and three letters of recommendation are required. The decision to admit or deny is made by the chair of the department in which they wish to take courses and conveyed in writing to the Graduate Admissions Office. Applicants are notified of the decision by Graduate Admissions in the Office of the University Registrar.

Students who are granted nonmatriculated status are charged the 8-10 unit rate for each quarter in which they are enrolled, and may enroll for a maximum of a total of one academic year. Nonmatriculated status is a privilege and not a right; the nonmatriculated status may be revoked at the University’s discretion (and after consideration of such factors as the University considers relevant in the particular case) at the end of any quarter of enrollment.

Nonmatriculated students are not permitted to enroll in certain courses, such as those in the following departments or programs: film and broadcasting courses in Art; all courses in Computer Science, Electrical Engineering, International Policy Studies, and the School of Medicine. Nonmatriculated students must limit their enrollment to classes in the department in which they have been admitted. Nonmatriculated students receive academic credit for courses satisfactorily completed and may obtain an official transcript. As a general proposition, they may use University facilities and services. In classes of limited enrollment, students in degree programs have priority. Nonmatriculated students may apply for housing but have a low priority for assignment and are not guaranteed housing. No fellowships, assistantships, or Stanford loans are available for nonmatriculated students. Nonmatriculated students are not eligible for a leave of absence.

Nonmatriculated students who later apply for admission to a degree program must meet the standard admission requirements and should not anticipate special priority because of work completed as a nonmatriculated student. Students who are admitted to a degree program may apply a maximum of 15 units of nonmatriculated study toward the residency requirement for a master’s degree and 30 units for the Engineer or Ph.D. degree, subject to the approval of the degree granting department.

Application forms for nonmatriculated status during the regular academic year are available from Graduate Admissions (https://studentaffairs.stanford.edu/gradadmissions/programs/nondegree), Office of the University Registrar. Deadlines for applying are included with the forms and are generally required two months before the start of the quarter.

Applicants interested in nonmatriculated student status for the Summer Quarter only should explore the Summer Session web site (http://summer.stanford.edu).

Non-Degree-Granting Programs

Stanford University has established a limited number of formal non-degree-granting programs within individual departments. These include the Knight Fellowship Program for mid-career journalists (Communication Department), and the Stegner Fellows Program for selected authors (Creative Writing Program, within the English Department).

Individuals may apply to these programs directly. Application requirements, admissions decisions, tuition requirements and financial support are all handled by the specific program. Individuals who are admitted to these programs will be registered at Stanford as nonmatriculated graduate students in the appropriate program. Upon completion of their program, they will receive a transcript and certificate of program completion.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program’s policies or practices, not through the Office of Community Standards.

Stanford Center for Professional Development

Qualified individuals may pursue graduate and professional certificates or take individual graduate and professional courses through the Stanford Center for Professional Development. Nonmatriculated students taking individual graduate courses for credit, or towards earning a graduate certificate, are charged tuition on a per-unit basis. For more information on available courses, applications, and deadlines visit http://scpd.stanford.edu or phone (650) 725-3000.

Postdoctoral Scholars

Postdoctoral scholars are trainees in residence at Stanford University pursuing advanced studies beyond the doctoral level in preparation for an independent career. Postdoctoral scholars are appointed for a limited period of time and may participate in Stanford research projects and/or may be supported by external awards or fellowships. In all cases, their appointment at Stanford is for the purpose of advanced studies and training under the sponsorship of a Stanford faculty member.

Postdoctoral appointments require initial full-time engagement in the designated research or study and are generally restricted to those who have earned a terminal degree such as Ph.D. or J.D. within the last three years or a medical degree such as M.D., M.B.B.S., or D.D.S. within the last six years. Requests for exceptions for individuals who are beyond these limits, or have not been actively engaged in research as their primary effort, must include a written statement from the sponsoring faculty member indicating what additional training outside the primary area of effort the individual plans to receive, and the reasons for which the exception is requested. Postdoctoral scholars are appointed at Stanford for fixed terms, typically one year but that may eventually total up to four years, and are subject to a strict five-year rule (that is, that the total postdoctoral appointment period is not to exceed a total of five years of postdoctoral research experience at all institutions combined). In cases of combined training, only the years of active research at the postdoctoral level are counted for salary and other purposes.

Postdoctoral scholars who begin a second postdoctoral appointment in a new field may have training extended to a maximum total of up to six years. Postdoctoral scholars may request temporary reductions in effort and pay due to temporary family or other conditions.

All postdoctoral scholars appointed at Stanford must be supported by Stanford grants and contracts, training grants, departmental or school fellowship funds, or external fellowships, or by a combination of these sources. Scholars may not be self-supporting. In addition, all postdoctoral scholars are eligible for a benefits package including medical, dental, life, and disability insurance. Postdoctoral scholars are normally appointed for 100% time.

Postdoctoral scholars must be registered at Stanford during every academic quarter of their appointment. Registration entails payment of a quarterly postdoctoral fee by the academic department or school appointing the scholar.

Prospective postdoctoral scholars should write directly to the department in which they wish to study or check for postdoctoral openings at http://postdocs.stanford.edu/prospects/index.html. For more information, see http://postdocs.stanford.edu.
Visiting Student Researchers

In limited instances, it is to the benefit of Stanford faculty to permit graduate students who have not yet obtained a Ph.D. (or its foreign equivalent) to engage in research on the Stanford campus. This could include students from other universities who are engaged in graduate-level research in a field of interest to the faculty member, or students doing a research rotation as part of a larger research study or grant.

These students must be registered as Visiting Student Researchers if they are in residence at Stanford for more than 30 days; they may be registered as Visiting Student Researchers if they are in residence for fewer than 30 days in order to receive the services available to Visiting Student Researchers. Visiting Student Researcher appointments are limited to one year in duration. Invited persons must be qualified to conduct research at a level comparable to that of other Stanford graduate students, and the research must be of benefit to Stanford as well as to the visitor. Forms for the appointment of Visiting Student Researchers are submitted to Graduate Admissions, Office of the University Registrar by the department issuing the invitation.

Under limited circumstances, the faculty sponsor may request an extension of the Visiting Student Researcher’s appointment beyond one year. Such extensions require the concurrence of the student’s home institution. Extensions beyond the second year are extremely rare, and require approval in advance from the office of the Vice Provost for Graduate Education.

Visiting Student Researchers are charged a monthly Visiting Student Researcher fee for each month in which they hold this appointment at Stanford, including partial months. They may waive the University’s student medical insurance plan only if they have comparable coverage with another carrier and submit proof of the comparable coverage prior to the term start date. Visiting Student Researchers are not entitled to any financial support from Stanford University. They may not be appointed to any assistantship positions nor hold any named Stanford fellowships. Funds intended for the support of matriculated Stanford students may not be used to support Visiting Student Researchers. Stanford cannot certify visiting researchers for deferment of U.S. educational loans.

Visiting Student Researchers are not permitted to enroll in or audit any courses, but in quarters in which they are registered as Visiting Student Researchers, they are eligible for the usual student benefits of nonmatriculated status. Students in this status are eligible for graduate on-campus housing on a space-available basis. They are also eligible for participation in the programs offered by the Graduate Life Office (http://studentaffairs.stanford.edu/glo).

Visiting Student Researchers are subject to the rules and regulations of Stanford University. These include, but are not limited to:

- **Intellectual Property**—Visiting Student Researchers are required to sign an SU-18 Stanford Patent and Copyright Agreement.
- **The Honor Code and Fundamental Standard**—Visiting Student Researchers who commit violations of these behavioral standards as reasonably determined by the sponsoring department are subject to termination of their Stanford appointment; these cases do not proceed through the Office of Community Standards.
- **Required Training**—The faculty member who invited the Visiting Student Researcher is responsible to assure that they receive any required training in order to be able to carry out their research at Stanford, including appropriate privacy and data security training for the protection of personally identifying information and Stanford data, health and safety training, instruction in the protection of human subjects, or any other instruction required by the work that the student will do here.

Citizens of other countries who enter the United States to be Visiting Student Researchers at Stanford must have a DS-2019 Certificate (to apply for a J-1 visa) issued by the Bechtel International Center and must be registered each quarter, including Summer Quarter, to maintain their visa status.

Undergraduate Visiting Researcher Interns (Nonmatriculated Study)

During the summer term, students from other universities who have not yet obtained a bachelor’s degree (or its foreign equivalent) may be invited by Stanford faculty to conduct research on the Stanford campus. Participants must be a degree-seeking student for at least two years at the bachelor’s level in a U.S. college or university accredited by a regional accrediting association or international college or university of recognized standing. Participation is contingent upon the approval of Graduate Admissions, Office of the University Registrar.

These students are registered as Undergraduate Visiting Research Interns. Appointments are limited to the Summer term. Invited persons must be qualified to conduct research at a level comparable to that of other Stanford undergraduates, and the research must be of benefit to Stanford as well as to the visitor. Forms for the appointment of Undergraduate Visiting Research Interns are submitted to Graduate Admissions, Office of the University Registrar by the department issuing the invitation.

Undergraduate Visiting Researcher Interns are charged a quarterly fee. They may waive the University’s student medical insurance plan only if they have comparable coverage with another carrier and submit proof of the comparable coverage prior to the term start date. Visiting Research Interns are not entitled to any financial support from Stanford University. Funds intended for the support of matriculated Stanford students may not be used to support Visiting Researcher Interns. Stanford cannot certify visiting researchers for deferment of U.S. educational loans.

Students of New Faculty

Faculty who are being hired by Stanford University, and who are currently advising doctoral students in advanced stages of degree completion at their home university, may appoint one or more of these students as Students of New Faculty, a nonmatriculated graduate status, for the purpose of facilitating the completion of the student’s doctoral research with their faculty advisor. To be eligible for this status, the student must:

- have completed at their home institution all degree requirements equivalent to those required for Stanford’s TGR status (i.e., completed all curricular requirements, candidacy, and residency), and
- be in good academic standing at their home institution, and remain so while at Stanford, and
- demonstrate agreement to the terms and conditions for this appointment by signing the Students of New Faculty Representations.

Appointment of these students into nonmatriculated Stanford graduate status requires the approval of the incoming faculty member, that faculty member’s Stanford department chair and school dean, and Stanford’s office of the Vice Provost for Graduate Education, as well as of the appropriate office at the student’s home institution.

Approval for these appointments is documented by means of an Affiliation Agreement between Stanford and the student’s home institution, identifying the student(s) and describing the arrangements for their appointment at Stanford. Attachments to this agreement specify the
Students are appointed into this status for one year at a time, up to a limit of three years. The Stanford department may request extensions beyond the third year. Approval for extensions requires the concurrence of the Stanford school dean’s office and the Vice Provost for Graduate Education, along with the appropriate office(s) at the student’s home institution.

Students of New Faculty must enroll in the appropriate TGR course during each quarter of the academic year while they are at Stanford, and will be charged TGR tuition during each enrolled quarter. Summer enrollment is optional subject to the relevant policies of Stanford and of the home institution. Students of New Faculty may be appointed and paid as Research Assistants. For more information, see GAP 2.4 (http://gap.stanford.edu/2-4.html).

Undergraduate Financial Aid

The University has a comprehensive need-based financial aid program for its undergraduates. Stanford is committed to meeting the University-computed financial need of each admitted student, and admission decisions are made without regard to the applicant’s financial status, except in the case of international students who are neither U.S. citizens nor U.S. registered permanent residents.

Before awarding institutional funds, the University assumes that students and their parents accept the first and primary responsibility for meeting educational costs. Stanford’s policy generally is to exclude undergraduates from being considered financially independent of their parents for University-administered scholarship aid unless a student is an orphan, a ward of the court, or at least 25 years of age. Spouses of married undergraduate students share in the responsibility to meet educational costs.

Stanford expects financial aid applicants to apply for and use resources from state, federal, and private funding sources, contribute from their earnings during nonenrollment periods (for example, summer), and use earnings from part-time employment during the academic year to meet educational expenses. If Stanford determines that an applicant and his or her family cannot meet standard educational expenses remaining after these resources are applied, the University offers scholarship funds to help meet remaining costs.

The amount of scholarship or grant funds offered to students is determined by the difference between the comprehensive cost of attendance (including tuition, fees, room, board and allowances for books, supplies, personal expenses, and travel) and the amount the student and parents can reasonably be expected to contribute toward educational costs based on family financial circumstances. Scholarships from outside sources may change the University’s financial aid award. When a student receives outside scholarships, these funds reduce or eliminate the student’s responsibility to contribute from job earnings. If the total in outside scholarships exceeds the student’s responsibility, the University then reduces institutional scholarship, dollar for dollar, by any additional amount.

Students are considered for University scholarship eligibility during their first four years of undergraduate enrollment. The Financial Aid Office (FAO) considers applicants for University scholarship eligibility beyond the twelfth quarter only if enrollment is essential in order to complete the minimum requirements for the first baccalaureate degree or major. Students who enroll for a fifth year in pursuit of a coterminous program, a minor, a second major, a second degree, or the B.A.S. degree are not eligible for University scholarship consideration but may apply for student loans and federal grants. Eligibility for federal student aid is limited to the equivalent of 18 quarters of full-time undergraduate enrollment, including course work taken at other colleges and universities. Students must also maintain satisfactory academic progress to retain financial aid eligibility.

For additional detailed information, refer to the FAO (http://financialaid.stanford.edu) web site.

Graduate Financial Aid

Graduate students at Stanford receive funding from a variety of sources. University fellowships, research assistantships, and teaching assistantships are offered primarily to doctoral students. In some cases, master’s students also may receive fellowships and assistantships.

In addition, outside agencies provide fellowships to many graduate students at Stanford. Students without fellowships or assistantships, and those whose funding does not cover all of their costs, may need to use student loans, savings, other personal assets, a spouse’s earnings, or parental support to meet their educational expenses.

Veterans’ Educational Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans’ benefits. Stanford certifies enrollment for students in degree seeking programs and students in one of 24 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans’ benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student’s degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an advisor to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student’s degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the “Residency Policy for Graduate Student (p. 57)” section of this bulletin. As an exception to that policy, students in master’s programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units. Students should consult with the Office for Military Affiliated Communities (OMAC) (https://military.stanford.edu/gi-bill-benefits) for consideration of optimal use of educational benefits.

Stanford participates in the Yellow Ribbon provision of the Post 9/11 GI Bill (Ch. 33). If a matriculated student qualifies for Chapter 33 benefits at the 100% level, the student may be eligible to receive additional funding through the Yellow Ribbon Program. Under this program, Stanford provides an annual award of $3,000 to undergraduate students to supplement the Chapter 33 base tuition benefit. The VA matches Stanford’s Yellow Ribbon contribution, so the student receives a combined total of $6,000 in additional funds. Certain matriculated
graduate students may be eligible for the Yellow Ribbon provision, and the amount of institutional contribution varies by school and program at the graduate level.

See the Office for Military Affiliated Communities (OMAC) web site (https://military.stanford.edu/gi-bill-benefits) for additional information about veterans' educational benefits.
TUITION, FEES, AND HOUSING

University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding.

Notification/Obligation to Read Email

For many University communications, email to a student's Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student's electronic signature.

Obligation to Pay Charges

By accepting Stanford's offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual's registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Regular quarterly tuition for the 2017-18 academic year, payable Autumn, Winter, and Spring quarters, is as follows:

<table>
<thead>
<tr>
<th>Type</th>
<th>Fee</th>
</tr>
</thead>
<tbody>
<tr>
<td>Undergraduate</td>
<td>$16,329</td>

* Ph.D. students in the Biomedical Sciences and in the Graduate School of Business are assessed the regular graduate tuition rate.  
** Law/GBS joint program tuition rate  
*** Policies concerning auditing are available in the Stanford Bulletin

For complete tuition information, see the Registrar’s tuition (https://registrar.stanford.edu/students/tuition-and-fees) web site.

Regular tuition fees apply to the undergraduate Overseas Studies and Stanford in Washington programs.

Eligibility for registration at reduced tuition rates is described below. Tuition exceptions may also be made for illness, disability, pregnancy, new-parent relief, or other instances at the discretion of the University.

No reduction in tuition charges is made after the first two weeks of the quarter.

All students are advised, before registering at less than the regular full-tuition rate, to consider the effects of that registration on their degree progress and on their eligibility for financial aid and awards, visas, deferment of student loans, and residency requirements.

The University reserves the right to change at any time, without prior notice, tuition, room fees, board fees, or other charges.

Undergraduate Student Tuition

During Autumn, Winter, and Spring quarters, undergraduates are expected to register at the regular full-tuition rate.

During Summer Quarter, Stanford undergraduates may register on a unit-basis. For Summer Quarter tuition rates and policies, see the Registrar’s Summer tuition (https://registrar.stanford.edu/summer-tuition) web site.

The following reduced-tuition categories can be requested by matriculated undergraduate students in the final stages of their degree program:

1. Permit to Attend for Services Only (PSO)

Undergraduates completing honors theses, clearing incompletes, or requiring a registration status, and who meet the PSO conditions listed in the “Special Registration Statuses (Undergraduate) (p. 38)” section of this Bulletin, may petition for PSO status one time only in their terminal quarter.

2. 13th Quarter

Undergraduates who meet the 13th Quarter conditions listed in the “Special Registration Statuses (Undergraduate) (p. 38)” section of this Bulletin may petition one time only to register for a minimum of eight units. For per-unit tuition rates, see the Registrar’s tuition web site.

3. Graduation Quarter

Undergraduates may petition to register for Graduation Quarter registration status in the quarter in which they are receiving a degree if they are not using any University resources (including housing), have completed all University requirements, and meet the Graduation Quarter conditions listed in the “Special Registration Statuses (Undergraduate) (p. 38)” section of this bulletin. Graduation Quarter may be permitted one time only. The tuition per quarter is $150 in 2017-18.

Coterminal students are only eligible for the Graduation Quarter special registration status if they are applying to confer both the undergraduate and graduate degree in the same quarter.

Coterminal Student Tuition

Coterminal students are assigned to either the undergraduate coterminal tuition group or the graduate coterminal tuition group, which dictates whether the student is charged undergraduate or graduate tuition. A coterminal student is subject to graduate tuition assessment and adjustment policies once placed in the coterminal graduate tuition group. Coterminal students are not eligible for undergraduate special registration statuses (with the exception of Graduation Quarter, if the student is applying to confer both their undergraduate and graduate degrees in the same quarter). Coterminal students may only be eligible to apply for graduate special registration statuses once their undergraduate degrees have been conferred. Coterminal students should see the student policies and procedures for tuition assessment, as described under in the “Coterminal Degrees (p. 47)” section of this bulletin.
Graduate Student Tuition

Matriculated graduate students are expected to enroll for at least eight units during the Autumn, Winter, and Spring quarters. Schools and departments may set a higher minimum. During the Autumn, Winter, and Spring quarters, matriculated graduate students in most departments must register at the reduced 8-, 9-, or 10-unit tuition rate if their enrollment plans are accepted by their departments. Students in the Stanford Law School, the MBA program in the Graduate School of Business, or the M.D. program in the School of Medicine, should consult appropriate school officers about tuition reduction eligibility.

Graduate students who are enrolled in more than one graduate degree at Stanford, where each program charges a different tuition, are charged:

1. the tuition associated with a degree in the doctoral/professional category, if the other degree is in the master's category. Those degrees in the doctoral or professional category for tuition purposes are the Ph.D., D.M.A., J.S.D., M.D., and J.D. degrees. Those degrees in the master's category for tuition purposes are the Engineer, M.A., M.S., M.P.P., M.B.A., M.F.A., L.L.M., M.L.S., and J.S.M. degrees.
2. the higher tuition rate, if both degrees are in the same category.
3. a University-approved tuition rate if the student is in a special program for which specific tuition agreements have been approved by the Faculty Senate (e.g., all joint degree programs (JDPs) or the Master of Science in Medicine program).

As a general proposition, during the Summer Quarter registration is not required by Stanford University and does not substitute for registration during the academic year. Students are required to be enrolled Summer Quarter if, during that quarter, they will meet any of the criteria listed in the "Enrollment Requirements (p. 5)" section of the "Graduate Degrees" section of this bulletin. Graduate students who do enroll Summer Quarter may reduce their enrollment to a minimum of one unit (charged on a per-unit basis, with a minimum tuition charge at the 1-3 unit rate) unless the terms of a fellowship or other financial support, or of their particular degree program, require a higher level of enrollment. TGR students who enroll in summer pay the TGR rate and must enroll in the required zero-unit course. Students in the schools of Law, Business, or the M.D. program should consult appropriate school officers regarding summer enrollment requirements. Students possessing an F1 or J1 student visa may be subject to additional course enrollment requirements in order to retain their student visas.

Honors Cooperative students register at the per-unit rate. Graduate students who are faculty spouses, regular Stanford employees, or full-time educators in the Bay Area may also register at the per-unit rate.

Nonmatriculated graduate students pay the same tuition rates as matriculated students, but must register for at least 8 units. Visiting Student Researchers pay a monthly fee; they may not enroll in or audit courses. Within certain restrictions, postdoctoral scholars may enroll in courses if the appropriate unit rate for tuition is paid.

The following reduced-tuition categories can be requested by matriculated graduate students in the final stages of their degree programs:

1. Terminal Graduate Registration (TGR)

   Doctoral students, master's students, and students pursuing Engineer degrees who have completed all degree requirements other than the University oral exam and dissertation (doctoral students) or a required project or thesis (Engineer or master's students) and meet the conditions listed in the "TGR (p. 60)" section of this bulletin may request Terminal Graduate Registration tuition status.

   Each quarter, TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser.

   TGR students register at a special tuition rate: $3,186 per quarter in 2017-18. TGR students may enroll in up to 3 units of course work per quarter at this tuition rate. Within certain restrictions, TGR students may enroll in additional courses at the applicable unit rate. The additional courses cannot be applied toward degree requirements since all degree requirements must be complete in order to earn TGR status.

2. Graduate Petition for Part-time Enrollment (formerly Graduate Tuition Adjustment)

   Graduate students who need only 3 to 7 remaining units to complete degree requirements or to qualify for TGR status may apply to register for one quarter only on a unit basis (3 to 7 units) to cover the deficiency. Students with disabilities covered under the Americans with Disabilities Act that have an approved reduced course load recommended by the Office of Accessible Education (OAE) (https://oae.stanford.edu) may also request a tuition adjustment for each quarter in which they take a reduced course load. For per-unit tuition rates, see the Registrar's tuition (https://registrar.stanford.edu/students/tuition-and-fees) web site.

3. Graduation Quarter

   Registration is required for the term in which a student submits a dissertation or has a degree conferred. Students who meet the conditions listed in the "Graduation Quarter (p. 60)" section of this bulletin are eligible to be assessed a special tuition rate of $150 for the quarter in which they are receiving a degree.

International Students

F-1 or J-1 visas are required by the U.S. Department of Homeland Security. International students must be registered as full-time students during the academic year. Summer Quarter registration is not required unless the I-20/DS-2019 notes the Summer Quarter as the start date. International graduate students comply with immigration regulations while enrolled for partial tuition if their Stanford fellowships or assistantships require part-time enrollment, if they are in TGR status, or if they are in the final quarter of a degree program. Nonmatriculated graduate students who are international students must register for at least 8 units.

Application Fee

Contact the Undergraduate Admission Office (http://admission.stanford.edu) for information about the undergraduate application fee and the Graduate Admission (http://gradadmissions.stanford.edu) section of the Office of the University Registrar for the current graduate application fee. Application fees for the School of Law, the School of Medicine, and the Graduate School of Business vary by program. Fees are payable at the time of application and are not refundable.

ASSU Fees

The Associated Students of Stanford University (ASSU) fees are established by student vote in Spring Quarter. Fees directly fund activities of student organizations and not operations of ASSU. The 2017-18 fees are:

- Undergraduates—$186 per quarter
- Graduate Students—$34 per quarter

ASSU fees are assessed in Autumn, Winter, and Spring quarters and can be waived subject to certain conditions. Waivers can be requested during the first two weeks of each quarter. The window for requesting waivers begins on the first Friday of each quarter, and remains open for two calendar weeks. Contact the ASSU (http://assu.stanford.edu) for details. Waivers granted result in a credit to the student's University bill.
Document Fee
Stanford charges a one-time Document Fee to all students admitted to new degree or non-degree programs. The fee is paid once only, regardless of the number of degrees a student may ultimately pursue. It covers the cost of a variety of University administrative services such as enrollment and degree certification, course drops and adds done in Axess before published deadlines, diplomas, and official transcripts and their production.

The document fee for students admitted to new degree or non-degree programs in 2017-18 is $250.

Campus Health Service Fee
All students enrolled on the main Stanford campus are required to pay the Campus Health Service Fee. The Campus Health Service Fee covers most of the services provided by Vaden Health Center, including primary care medical visits, psychological evaluation and short-term therapy at Counseling and Psychological Services (CAPS), and health and wellness programs. The services provided by Vaden Health Center are not covered by Cardinal Care or a student’s private health insurance. More information and answers to questions about the fee can be found on the Campus Health Service Fee (https://vaden.stanford.edu/about/fees/campus-health-service-fee-health-fee) web site. The fee for 2017-18 is $210 per quarter.

Health Insurance
The University requires all registered students to carry medical insurance to provide coverage for services not provided by Vaden Health Center. Those who carry medical insurance through an alternate carrier are generally eligible for waiver of the Stanford Cardinal Care health insurance plan. Students are automatically enrolled in and charged for the Stanford student health insurance plan, Cardinal Care, unless they have completed waiver procedures by the waiver deadline.

For complete information on health insurance, see the Vaden Health Center Insurance (http://vaden.stanford.edu/insurance) web site.

Special Fees

New Student Orientation Fee
A fee is charged to all entering undergraduates for the costs of orientation, including room and board, and for the cost of class dues to provide funds for later activities of the class.

Law Student Services Fee
A fee is charged each quarter to School of Law students for supplementary course materials.

Graduate School of Business M.B.A. Course Reader Fee
A fee is charged each quarter to M.B.A. students in the Graduate School of Business to cover the cost of in-class handouts and licensing fees.

Late Study List Fees
Charges are imposed for late submission of study lists. The amount is $200.

Laboratory Fee
Students in chemistry laboratory courses are charged a nonrefundable fee.

Course Fees
Courses for which special fees are charged, such as in Music Practice; Athletics, Physical Education, Recreation; and Dance, are indicated in the notes of the scheduled class on Axess (http://axess.stanford.edu) or ExploreCourses (http://explorecourses.stanford.edu).

Dissertation Fee
Each Ph.D. and D.M.A. candidate has the option to either submit electronically or on paper. Electronic submission is free. Students who choose to submit on paper are charged a fee to cover the cost of microfilming and binding the dissertation and the cost of publishing the abstract.

International Scholar Service Fee
A one-time fee for visa authorization documents is charged to international postdoctoral and visiting scholars.

Housing
University housing is available to enrolled Stanford degree-seeking undergraduates and graduate students as space permits and according to policies described on the R&DE Student Housing (http://studenthousing.stanford.edu) web site. Residential and Dining Enterprises (R&DE) Student Housing is responsible for managing and maintaining student residences, assigning students to housing, and operating the regional housing front desks.

Information on University housing assignments, options, policies, application procedures, and deadlines may be obtained on the R&DE Student Housing (http://studenthousing.stanford.edu) web site, by mail or in person at 408 Panama Mall, Suite 101, Stanford University, Stanford, CA 94305, by telephone at (650) 725-2810, or by email at studenthousing@stanford.edu (housingassignments@lists.stanford.edu). Current and prospective students may also contact R&DE Student Housing by filing a HelpSU (https://helpsu.stanford.edu/helpsu/3.0/helpsu-form?pcat=studenthousing) request. Information regarding off-campus housing may be obtained from the Community Housing (http://offcampus.stanford.edu) section of the R&DE Student Housing web site, by mail or in person at 408 Panama Mall, Suite 101, Stanford University, Stanford, CA 94305, by telephone at (650) 723-3906, or by email at communityhousing@stanford.edu.

Residential Education (http://resed.stanford.edu) (650-725-2800) and the Graduate Life Office (http://glo.stanford.edu) (650-723-1171) are responsible for residential staff, educational programs, counseling, and crisis intervention in undergraduate and graduate housing respectively.

Housing Rates
Complete information on housing (https://rde.stanford.edu/studenthousing/housing-options) is available on the R&DE Student Housing web site. Campus housing rates are generally below local area market rents.

- See Assignments and Contracts (https://rde.stanford.edu/studenthousing/assignments-contracts) to learn how to apply for upperclass undergraduate, single graduate, couple without children, or student with children housing.
- Rates for 2017-18 are posted online:
  - Graduate residence rates chart (https://rde-stanford-edu.s3.amazonaws.com/Housing/PDF/2017-18_Grad_RatesChart.pdf)

All on-campus rates are per student and include utilities and coinless laundry. Room rates are charged quarterly on the University bill. Information on payment options and procedures is discussed in assignment information sent out by R&DE Student Housing and in the Payments section of the Stanford Bulletin.
House Dues
A quarterly house dues fee for students is generally determined by the local residence staff and/or residents of each house and may be included with room and board charges on the University bill.

Technology Fee
Students who live in housing are automatically assessed a technology fee on their university bill that covers in-room network connections and a land-line phone with telephone service (phone service is provided on campus only).

Undergraduate Residences
Approximately 97 percent of undergraduates live in University housing, not counting students studying abroad during the academic year. All freshmen are required to live in University residences their first year on campus and are automatically assigned housing following admission. Information on the housing assignment process is included in the R&DE Student Housing (https://view.publitas.com/stanford-undergrad/approaching-stanford-2017/page/58-59) section of Approaching Stanford (http://approaching.stanford.edu). Because freshmen must live in campus housing, losing eligibility for University housing also leads to a loss of student status until the student has returned to University housing unless an extraordinary exemption is granted from the Office of the Vice Provost for Undergraduate Education.

Residence assignments for continuing undergraduates are made on the basis of an annual lottery, called the Draw (http://thedraw.stanford.edu), and quarterly waiting lists. Undergraduates are guaranteed four years of University housing (three years for transfer students) if:

1. they are in compliance with the University housing agreement and University policies,
2. they apply by the appropriate Draw deadlines, and
3. they are willing to live anywhere on campus.

Undergraduate residences include traditional residence halls, language and culture theme houses, cross-cultural theme houses, student-managed and cooperative houses, apartments, suites, fraternities, and sororities.

Graduate Residences
Approximately 66 percent of matriculated graduate students live in housing provided by R&DE Student Housing, both on campus and off campus. Residence assignments are made on the basis of an annual lottery and quarterly waiting lists. New matriculated students are guaranteed University housing for their first year of study if:

1. they are in compliance with the University housing agreement and University policies,
2. they apply by the first round application deadline for the Autumn term, and
3. they are willing to live anywhere on campus.

Graduate Residences include designated university residence halls (Branner, Crothers/Crothers Memorial, Florence Moore, Gerhard Casper, Lakeside, Ricker, Stern, Toyon, Wilbur, Yost, Murray, and EAST) are required to participate in an assigned after new first-year graduate students who are guaranteed housing and continuing students with remaining priority years.

Academic-year assignment priorities for graduate students are detailed on the Assignment Guarantee and Priorities (https://rde.stanford.edu/studenthousing/assignment-guarantee-and-priorities) page of the R&DE Student Housing website. Priorities are dependent upon degree level and number of years each student has already lived in housing.

Single graduate students may request assignment to furnished graduate apartments in a variety of configurations. Studios, efficiency two-bedroom units (shared kitchen and bath), junior studios (private bedroom and bath with shared kitchen), two-, three- and four-bedroom apartments are available.

Couples without children may request assignment to furnished studios or one-bedroom apartments. Couples housing is available to students who are married and to students who have a same-sex or opposite-sex domestic partner. At Stanford University, a domestic partnership is defined as an established, long-term romantic partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

Furnished two- and three-bedroom apartments are available for students with children, based on the number of dependents. Housing for students with children is available to married couples, domestic partners, and single parents who have dependent children living with them. Housing is not provided for extended families. Parents/siblings of students and live-in day care staff are not permitted to live in University housing.

Community Housing
Community Housing provides resources to assist students in locating private rooms, houses, and apartments available for rent in surrounding communities. Students must make rental arrangements directly with landlords. An online listing service (https://rde.stanford.edu/studenthousing/housing-listings) facilitates the process of making connections. Information on community housing may be obtained from the Community Housing web site (http://offcampus.stanford.edu), by mail or in person at 408 Panama Mall, Suite 101, Stanford University, Stanford, CA 94305, by telephone at (650) 723-3906, or by email at communityhousing@stanford.edu.

During mid-August to mid-September, temporary accommodations are available in student residence halls at a modest charge for graduate students searching for off-campus housing for Autumn Quarter. Review the Stanford Conferences (https://rde.stanford.edu/conferences/short-term-grad-student-summer-housing) short-term housing web page for information.

Note that Stanford University does not investigate, endorse, or guarantee the accuracy of the information provided by any listing, or the condition of the accommodation. Furthermore, the University assumes no responsibility for housing arrangements made by persons using any of these services.

Meal Plans
For information on meal plans, see the R&DE Stanford Dining web site (http://dining.stanford.edu) and its meal plan rate page (https://rde.stanford.edu/dining/mealplans).

Stanford University’s Residential Education program promotes the philosophy that living and learning are integrated and that formal teaching, informal learning, and personal support in residences are integral to a Stanford education. Meals play a key role in this mission of community building, leading, and learning. Therefore, residents of designated university residence halls (Branner, Crothers/Crothers Memorial, Florence Moore, Gerhard Casper, Lakeside, Ricker, Stern, Toyon, Wilbur, Yost, Murray, and EAST) are required to participate in an

New for 2017-2018: Arrillaga Family Dining Commons is open for student meals during spring break.

All freshmen and upperclass students living in the above houses can choose an R&DE voluntary meal plan which offers expanded flexibility and numerous options for use on the campus. Residents of Yost, Murray, and EAST have a dedicated row meal plan. Students assigned to the Governor’s Corner Suites and the remaining row houses are required to purchase either a Dining Societies meal plan (Suites), or a house meal plan (managed through their self-operated or co-op row house staff).

Students are allowed to switch meal plans up until the last two weeks of the quarter. Meal plans are billed on a quarterly basis, and the cost is determined by the number of service days in each quarter. Cardinal Dollars do not expire and carry over from year to year as long as you are enrolled as a student. The remaining Meal Plan Dollar balance carries over at the end of each quarter and can be used throughout the academic year as long as the student is enrolled in a meal plan. All Meal Plan Dollars expire at the end of Summer Quarter. Meal Plan Dollars provided per quarter as part of the Ultimate Flex, Premier Flex, Cardinal Select and Cardinal Light plans vary depending on the number of days in each quarter.

Meal Plans

**Ultimate Flex**
- Most flexible of all meal plans offering the most options (dining halls, late night, cafés, Munger Market)
- 19 meals per week plus 410 Meal Plan Dollars, 100 Cardinal Dollars and 5 guest meals per quarter
- All 19 meals are served in the dining halls
- Meal Plan Dollars can be used in the dining halls, most R&DE cafés, Munger Market and late night venues
- Cardinal Dollars can be used in the dining halls, R&DE cafés, Munger Market and late night operations plus Starbucks, Panda Express and Subway locations in Tresidder Memorial Union
- During home football games a meal swipe can be used at the Stanford Stadium

**Premier Flex (Pilot)**
- Second most flexible meal plan (dining halls, late night, cafés, Munger Market) giving students the most meal plan dollars
- 15 meals per week plus 485 Meal Plan Dollars and 5 guest meals per quarter
- All 15 meals are served in the dining halls
- Meal Plan Dollars can be used in the dining halls, most R&DE cafés, Munger Market and late night venues
- During home football games a meal swipe can be used at the Stanford Stadium

Undergraduate students living in Branner, Crothers/Crothers Memorial, Florence Moore, Gerhard Casper, Lakeside, Ricker, Stern, Toyon, Wilbur are required to be at a minimum on one of the Cardinal mandatory meal plans (Classic, Select, and Light), but can choose to switch meal plans at any time, including up to the Ultimate Flex or Premier Flex meal plans, until the last two weeks of each quarter:

**Cardinal Classic**
- 19 meals per week served only in the dining halls
- 5 guest meals per quarter
- Students on this meal plan who desire kosher meals are able to eat 3 kosher dinner meals in Florence Moore using meal swipes
- During home football games a meal swipe can be used at the Stanford Stadium

**Cardinal Select**
- 14 meals per week plus 420 Meal Plan Dollars and 5 guest meals per quarter
- All 14 meals are served in the dining halls
- Meal Plan Dollars can be used in the dining halls, most R&DE cafés, Munger Market and late night venues
- Students on this meal plan who desire kosher meals are able to eat 3 kosher dinner meals in Florence Moore using meal swipes
- During home football games a meal swipe can be used at the Stanford Stadium
- The default meal plan for freshmen and upperclass students not living in Yost, Murray or EAST

**Cardinal Light**
- 10 meals per week plus 750 Meal Plan Dollars and 5 guest meals per quarter
- All 10 meals are served in the dining halls and the Meal Plan Dollars can be used in the dining halls, most R&DE cafés and late night venues
- Students on this meal plan who desire kosher meals are able to eat 3 kosher dinner meals in Florence Moore using meal swipes
- During home football games a meal swipe can be used at the Stanford Stadium
- This meal plan is only available for upperclass students.

**Row House**
Students living in Yost, Murray, or EAST are required to be on the Row House mandatory undergrad meal plan: 12 meals per week plus 345 meal plan and open kitchen dollars.
- 10 meals are served at the row house
- 2 meals can be eaten at any dining hall
- Meal Plan Dollars can be used in the dining halls, most R&DE cafés and late night venues
- Open kitchen funds are available for additional meals in the row house when meals are not being served
- During home football games a meal swipe can be used at the Stanford Stadium

**Payments**

By accepting Stanford’s offer of admission and enrolling in classes, each student accepts responsibility for paying all debts to the University, including tuition and fees, for which he or she is liable. An individual’s registration as a Stanford student constitutes his or her agreement to make timely payment of all amounts due.

Charges and credits from offices within the University are aggregated in a student’s individual account and presented on the University bill (https://sfs.stanford.edu/student-accounts/pay-your-bill/understanding-your-student-account). Student Financial Services sends the University bill electronically to students monthly via Stanford ePay. Students may designate ‘Authorized Payers’ via Stanford ePay to allow others to view the student account and make payment. Students and Authorized Payers may view the student account online 24 hours a day, seven days a week,
via Stanford ePay (https://sfs.stanford.edu/student-accounts/pay-your-bill). Payments should be made online through Stanford ePay. If necessary, the student or Authorized Payer may print a bill or receipt from Stanford ePay.

A list of payment due dates throughout the academic year is available on the Student Financial Services website (https://sfs.stanford.edu/student-accounts/pay-your-bill/dates-and-deadlines). To avoid late payment penalties, online payments via Stanford ePay can be made up to midnight PST on the 15th of the month; mailed payments must be received by 5:00 p.m. on the 15th of the month.

After the start of the term, adding units may result in additional tuition charges. Other fees, such as room damage repair charges, petition fees, late fees, lab fees, library fees, and other miscellaneous fees or charges are due on the 15th of the month after which they are billed.

**Forms of Payment**

Stanford's standard method of payment is the online service, Stanford ePay, which includes electronic check (eCheck) and an International Funds Transfer option. No fee is associated with ePay payments. International students wishing to pay in foreign currencies should use the International Funds Transfer option within ePay which allows students to arrange for payment in foreign currencies. This electronic option offers students favorable exchange rates and eliminates bank fees typically charged for wire transfer.

Payers may use their personal online banking portal with any U.S. bank to pay the University bill. Stanford does not accept cash, credit cards or postdated checks for payments to the University bill.

**Credit Balances**

Stanford uses Direct Deposit to refund credit balances to students. See the Direct Deposit enrollment instructions (https://sfs.stanford.edu/student-accounts/refunds/direct-deposit) web site. Students are expected to enroll in Direct Deposit at the beginning of their Stanford career or as soon as possible thereafter. Direct Deposits reach the bank within 24-48 hours of processing. Receipt of funds will not be delayed by mail time, lost checks, or the need to go to the bank as is the case with paper checks.

Generally credit balances resulting from financial aid are refunded every Monday, Wednesday and Friday. Credit balances resulting from an overpayment of cash (e.g. ePayment, check) remain on the student account to be applied to future charges. A refund of a cash overpayment may be provided at any time upon student request. Annually, in August, Student Financial Services will refund any remaining overpayment of cash to students who have graduated or otherwise discontinued their career at Stanford.

**Account Fees and Actions**

**Late Payment Fees**

The University must receive the full amount due on or before the due date indicated on the bill. If full payment is not received by the due date, a late fee of 1% of the amount past due may be assessed. Anticipated aid (as that has been accepted but not disbursed and is shown on the student account) reduces the total amount due prior to late fees being applied.

Stanford University
27

**Holds**

Accounts that become past due more than 30 days are subject to financial holds. Among other things, a financial hold blocks transcripts, diplomas, and enrollment eligibility.

**Insufficient Funds**

A non-refundable $25.00 administrative fee may be assessed for checks or eCheck payments returned due to insufficient funds. In addition, student accounts are subject to holds, and late payment penalties may apply.

**Delinquent Accounts**

Delinquent accounts may be reported to one or more of the national credit reporting agencies. Severely delinquent accounts may be referred to a collection agency and/or placed in litigation in accordance with state and federal laws. Students with delinquent accounts may be held responsible for collection costs, attorney fees, and court costs. Stanford may consider past delinquent accounts in determining whether to provide Stanford loans.

**Refunds**

Students who withdraw from the University before the end of a term may be eligible to receive refunds of portions of their tuition under certain limited circumstances.

See the Registrar’s Tuition Refunds page for a schedule of refunds (https://registrar.stanford.edu/students/tuition-and-fees/tuition-refund-schedule).

**Annull ed Registration**

Students who take a leave of absence or summer annulment from the University voluntarily before the first day of instruction may have their registrations annulled. Tuition is refunded in full if the student never attended. Such students are not included in University records as having registered for the term and new students do not secure any privileges for admission for any subsequent quarter as returning students. A leave of absence or summer annulment does not automatically cancel health coverage (both Cardinal Care and the Campus Health Services Fee) unless the leave of absence or summer annulment is granted before the first day of instruction. Financial aid recipients should be aware that a proportion of any refund is returned to the various sources of aid.

**Cancellation of Registration or Suspension**

Students who have their registrations canceled or are suspended from the University generally receive refunds on the same basis as those receiving leaves of absence unless otherwise specified. A student whose registration is canceled less than one week after the first day of instruction for an offense committed during a preceding quarter receives a full refund of tuition fees.

**Institutional Interruption of Instruction**

It is the University’s intention to avoid the necessity of taking the actions described in this paragraph. However, should the University determine that continuation of some or all academic and other campus activities is impracticable, or that their continuation involves a high degree of physical danger to persons or property, activities may be curtailed and students requested or required to leave the campus. In such an event, arrangements are made as soon as practical to offer students the opportunity to complete their courses, or substantially equivalent work, so that appropriate credit may be given. Alternatively, the University may determine that students receive refunds on the same basis as those receiving leaves of absence, or on some other appropriate basis.

**Leaves of Absence**

A student in good standing who desires or is required to take a leave of absence from the University after the first day of instruction, but
before the end of the first 60 percent of the quarter (term withdrawal
deadline), may file a petition for a leave of absence and tuition refund.
Graduate students submit the completed leave of absence form to the
Student Services Center (http://studentservicescenter.stanford.edu).
Undergraduates who wish to withdraw from the current quarter, or from
a quarter for which they have registered in advance and do not wish to
attend, must file a Leave of Absence Petition (https://stanford.box.com/
v/leaveofabsence) with and receive approval from the office of the Vice
Provost for Undergraduate Education, via the office of Undergraduate
Advising and Research (UAR), Sweet Hall. A voluntary leave of absence
after the first 60 percent of the quarter (term withdrawal deadline) is
only granted for approved health and emergency reasons. For more
information on leaves of absence, undergraduates should see the “Leaves
of Absence and Reinstatement (Undergraduate) (p. 39)” section of
this bulletin, and graduate students should see the “Leaves of Absence
(Graduate) (p. 58)” section of this bulletin.

Room and Meal Plan Refunds

Students assigned to a University residence are subject to the terms of
the University Residence Agreement, and are required to live in University
Housing for the full duration of their signed contract. The text of the
University Residence Agreement is available at the Residence Agreement

Room refunds are made only when students move out of the residence
system and graduate from or cease to be enrolled at the University.
Eligibility for refunds is listed in the Residence Agreement. Termination
of Occupancy is filed in Axess. Filing a termination of occupancy form
and moving out of Student Housing does not necessarily entitle a student
to a refund. Students in greek letter houses are billed directly by the
fraternity or sorority, and refunds are arranged between the student and
the fraternity or sorority.

A meal plan refund is based on the date when a student moves out of
University residence and is approved under conditions as specified in the
Residence Agreement. If a student uses the meal plan after that date, an
additional daily charge incurs.

Any decision to refund prepaid room and meal plan charges or to
waive liability for deferred charges is made at the sole discretion of
the University. Students with questions about refunds should contact
Housing Assignments for room refunds or the central office of Stanford
Dining for residential meal plan refunds.
UNDERGRADUATE DEGREES AND PROGRAMS

Degree Requirements

A Liberal Education

As do all major universities, Stanford provides the means for its undergraduates to acquire a liberal education, an education that broadens the student’s knowledge and awareness in each of the major areas of human knowledge, that significantly deepens understanding of one or two of these areas, and that prepares him or her for a lifetime of continual learning and application of knowledge to career and personal life.

The undergraduate curriculum at Stanford allows considerable flexibility. It permits each student to plan an individual program of study that takes into account personal educational goals consistent with particular interests, prior experience, and future aims. All programs of study should achieve some balance between depth of knowledge acquired in specialization and breadth of knowledge acquired through exploration. Guidance as to the limits within which that balance ought to be struck is provided by the University’s General Education Requirements and by the requirements set for major fields of study.

These educational goals are achieved through study in individual courses that bring together groups of students examining a topic or subject under the supervision of scholars. Courses are assigned credit units. To earn a bachelor’s degree, the student must complete at least 180 allowable units and, in so doing, also complete the Writing Requirement, the Ways of Thinking, Ways of Doing (Ways) Requirement, the Language Requirement, and the requirements of a major.

The purpose of the Writing Requirement is to promote effective communication by ensuring that every undergraduate can write clear and effective English prose. Words are the vehicles for thought, and clear thinking requires facility in writing and speech.

The Language Requirement ensures that every student gains a basic familiarity with a foreign language. Foreign language study extends the student’s range of knowledge and expression in significant ways, providing access to materials and cultures that otherwise would be out of reach.

The Ways Requirement provides guidance toward the attainment of breadth and stipulates that a significant share of a student’s work must lie outside an area of specialization. These requirements ensure that every student is exposed to different ideas and different ways of thinking. They enable the student to approach and to understand the important ways of knowing how to assess their strengths and limitations, their uniqueness, and, no less important, what they have in common with others.

Depth, the intensive study of one subject or area, is provided through specialization in a major field. The major relates more specifically to a student’s personal goals and interests than do the general requirements outlined above. Stanford’s curriculum provides a wide range of standard majors through its discipline-oriented departments, a number of interdisciplinary majors in addition to department offerings, and the opportunity for students to design their own major programs.

Elective courses, which are not taken to satisfy requirements, play a special role in tailoring the student’s program to individual needs. For most students, such courses form a large portion of the work offered for a degree. Within the limitations of requirements, students may freely choose any course for which previous studies have prepared them.

This section provides more detailed descriptions of these various requirements and the rationales upon which they are based.

Bachelor of Arts (B.A.), Bachelor of Science (B.S.)

Stanford University confers the degree of Bachelor of Arts (B.A.) or the degree of Bachelor of Science (B.S.) on those candidates who have been recommended by the Committee on Undergraduate Standards and Policy (C-USP), who have applied in advance for conferment of the degree, and who have fulfilled the following requirements:

1. A minimum of 180 units of allowable University work. (As described below, units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 180-unit minimum.)
2. The Writing, General Education, and Language Requirements (see below).
3. Curricular requirements of at least one major department or program and the recommendation of the department(s). (Descriptions of curricular and special degree requirements are included in each department’s section of this bulletin.)
4. Students admitted as freshmen—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units through the Last Units Out of Residence (https://stanford.app.box.com/v/last-units-out-of-residence) petition.
5. Students admitted as transfers—A minimum of 90 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 90 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units through the Last Units Out of Residence (https://stanford.app.box.com/v/last-units-out-of-residence) petition.

Stanford confers the Bachelor of Science degree on candidates who fulfill these requirements in the School of Earth, Energy & Environmental Sciences, in the School of Engineering, or in the departments of Applied Physics, Biology, Chemistry, Human Biology, Mathematics, or Physics in the School of Humanities and Sciences. The University also awards B.S. degrees to candidates in the Program in Science, Technology, and Society, in the Program in Mathematical and Computational Science; in the Program in Symbolic Systems; and, when appropriate, in the Program for Individually Designed Majors. Candidates who fulfill these requirements in other schools or departments receive the Bachelor of Arts degree.

Students who complete the requirements for two or more majors, which ordinarily would lead to the same degree (B.A. or B.S.), should review “The Major” section of this bulletin to ensure that they have an understanding of the requirements for multiple or secondary majors.

Bachelor of Arts and Science (B.A.S.)

The University confers the degree of Bachelor of Arts and Science (B.A.S.) on candidates who have completed the following:

1. with no overlapping courses, the curricular requirements of two majors which ordinarily would lead to different bachelor’s degrees (that is, a Bachelor of Arts degree and a Bachelor of Science).
2. These students must have applied in advance for graduation with the B.A.S. degree instead of the B.A. or B.S. degree, been recommended by the Committee on Undergraduate Standards and Policy (C-USP),
3. Fulfilled a minimum of 180 units of University work described in point 1 of the “Bachelor of Arts (B.A.), Bachelor of Science (B.S.)” section.
4. The requirements of each major without applying any course towards the requirements of more than one major, according to “Multiple
Majors’ section of this bulletin. The Major-Minor and Multiple Major Course Approval Form (https://stanford.app.box.com/v/majmin-multmaj) is required for graduation for students with the B.A.S. degree.

5. The Writing, General Education, and Language requirements.

6. Students admitted as freshmen—A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units.

7. Students admitted as transfers—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement.

Students who cannot meet the requirements for both majors without overlapping courses are not eligible for the B.A.S., but may apply to have a secondary major recorded on their transcripts. (See “The Major” in the “Undergraduate Degrees and Programs” section of this bulletin.)

Dual Bachelor’s Degrees (Concurrent B.A. and B.S.)

A Stanford undergraduate may work concurrently toward both a B.A. and a B.S. degree. To qualify for both degrees, a student must complete:

1. A minimum of 225 units of University work. Units above the allowable limits for activity courses and for courses taken on a satisfactory/no credit and credit/no credit basis cannot be counted towards the 225 unit minimum.

2. The requirements of each major without applying any course towards the requirements of more than one major, according to "Multiple Majors" section of this bulletin. The Major-Minor and Multiple Major Course Approval Form (https://stanford.app.box.com/v/majmin-multmaj) is required for graduation for students with dual degrees.

3. The Writing, General Education, and Language requirements.

4. The curricular requirements of two majors (one of which leads to a Bachelor of Arts degree and the other to a Bachelor of Science degree).

5. Students admitted as freshmen—A minimum of 180 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 180 units in resident work may petition for a waiver of the last quarter-in-residence requirement for up to 15 units.

6. Students admitted as transfers—A minimum of 135 units (including the last quarter in residence) at Stanford. In special cases, students who have earned at least 135 units in resident work may petition for a waiver of the last quarter-in-residence requirement.

A student interested in dual bachelor’s degrees should declare them in Axess no later than two quarters in advance of completing the program.

Students who do not meet the higher unit and residence requirements of the dual degree option may be eligible instead for the B.A.S. degree as described above.

Second Bachelor’s Degree

Stanford does not award a second Bachelor of Arts (B.A.) degree to an individual who already holds a Bachelor of Arts, nor a Bachelor of Science (B.S.) degree to an individual who already holds a Bachelor of Science degree. Nor does Stanford award a Bachelor of Arts and Sciences degree to the holder of either a B.A. or B.S.

However, the holder of a Bachelor of Arts degree from Stanford may apply to the C-USP Subcommittee on Academic Progress for admission to candidacy for a Bachelor of Science degree, and the holder of a Bachelor of Science degree from Stanford may apply for candidacy for a Bachelor of Arts degree. A recommendation of the major department for the second bachelor’s degree must accompany the application. Generally, a holder of a B.A. or B.S. degree from Stanford may not apply for the Bachelor of Arts and Sciences degree, although a student may submit a petition for exception. The C-USP Subcommittee on Academic Progress determines whether the application for a second degree may be approved and/or the conditions a student must meet in order to be allowed to earn a second degree. The office of the Vice Provost for Undergraduate Education, via the Office of Undergraduate Advising and Research (UAR), Sweet Hall, reviews these petitions. A student approved for this program may register as an undergraduate and is subject to the current rules and regulations affecting undergraduates. Requirements for a second Stanford bachelor’s degree are the same as those described above for dual bachelor’s degrees.

Approvals or denials of applications under this section are in the discretion of the University.

Finally, inquiries by students who have earned their bachelor’s degree elsewhere for a second bachelor’s degree at Stanford are not accepted.

Coterminal Bachelor’s and Master’s Degrees

See the “Coterminal Degrees (p. 46)” section of this Bulletin.

The Major

The primary purpose of the major is to encourage each student to explore a subject area in considerable depth. This in-depth study complements the breadth of study promoted by the General Education Requirements and, in many cases, by a student’s choice of electives. Work in depth permits practice in critical analysis and the solving of problems. Because of its depth, such study also provides a sense of how knowledge grows and is shaped by time and circumstances.

The structure of a major should be a coherent reflection of the logic of the discipline it represents. Ideally, the student should be introduced to the subject area through a course providing a general overview, and upper-division courses should build upon lower-division courses. The course of study should, if feasible, give the student the opportunity and responsibility of doing original, creative work in the major subject. Benefits of the major program are greatest when it includes a culminating and synthesizing experience such as a senior seminar, an undergraduate thesis, or a senior project.

Degree Requirements

Undergraduates must select a major by the end of their sophomore year. All undergraduate major programs listed in this bulletin, except for certain honors degree programs that require application and admission in advance, are open to all students. Students may use Axess to declare, drop, or change a major. In some departments or programs, though, a late change could easily result in extending the period of undergraduate study. Students who have applied to graduate or who wish to declare an individually designed major must use the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program (https://stanford.app.box.com/v/change-ug-program) to select or change a major. Students requiring assistance should contact the Student Services Center (https://studentservicescenter.stanford.edu). For academic advising regarding majors, students should consult the Office of Undergraduate Advising and Research (http://undergrad.stanford.edu) (UAR).

Check individual department or program listings in this bulletin for the undergraduate degrees offered and for specific major requirements. If an area of study has no baccalaureate degree, that discipline is not available as a regular undergraduate major.
Faculty set the minimum requirements for the major in each department. These requirements usually allow latitude for tailoring a major program to a student's specific educational goals. The responsibility for developing a major program within department or program requirements lies ultimately with the individual student working in consultation with the major adviser.

**Limits of the Major**

In order to achieve the values of study in depth, a well-structured major should constitute at least one-third of a student's program (55-65 units). To ensure the values of breadth, a major should comprise no more than two-thirds of a student's program (115-125 units); and, to avoid intellectual parochialism, a major program should not require a student to take more than about one-third of his or her courses from within a single department.

Major requirements in cognate subjects essential to the structure of a given major should be counted as part of the major program in applying these guidelines. Department or school requirements designed to provide extra disciplinary breadth should not be counted.

For a limited number of qualified students, many departments and programs offer special programs leading to degrees with honors. A student may apply to the major department or program for acceptance into the honors program. Demands on the student may vary, but all honors programs encourage creative, independent work at an advanced level in addition to the major requirements.

The guidelines set forth here are deliberately general; implementation must take into account the specific needs of a student’s program and the nature of the discipline or disciplines involved. The exercise of responsibility in achieving the desired educational balance belongs first with the student, who, after all, has the strongest interest in the value of his or her education. It belongs secondarily to departments and major programs, which must set the requirements of competence in the many majors offered.

**Multiple Majors**

Although most students declare only one major, a student may formally declare more than one major within a single bachelor’s degree (B.A., B.S., or B.A.S.) program. The student may do that either at the time of initial major declaration or, as may be more advisable given the planning required to complete more than one major, by amending the original declaration. The student's major departments or programs have access routinely to all information pertinent to that student's academic record (for example, course and grade information), and each is expected to provide advising and other assistance. To be awarded a bachelor's degree with multiple majors, the student must fulfill the following requirements:

1. Formally declare all majors through Axess to the Office of the University Registrar.
2. Satisfy the requirements of each major without applying any course towards the requirements of more than one major or any minor unless:
   a. overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language);
   b. overlapping courses enable the student to meet school requirements (for example, for two majors within the School of Engineering). Currently, only the School of Engineering has school requirements for its undergraduate majors.
3. Submit the Major-Minor and Multiple Major Course Approval Form (https://stanford.box.com/MajMin-MultMaj) by the Final Study List deadline of the quarter of intended graduation. The form is required for graduation for students with multiple majors or a minor and should be submitted to the Student Services Center (https://studentservicescenter.stanford.edu).

Students pursuing multiple majors must complete a multiple major program form indicating which courses they plan to apply toward each major and any minor(s). Departments must certify that the plan of study meets all requirements for the majors and any minor(s) without unallowable overlaps in course work; the School of Engineering Dean’s office certifies this information in any case involving an Engineering major or minor. To facilitate advance planning, multiple major program forms are available at any time from the Registrar's forms site (https://registrar.stanford.edu/resources-and-help/forms).

If the pursuit of multiple majors (or joint majors or secondary majors, or minors) unduly delays an undergraduate’s progress through Stanford, the University reserves the right to limit a student to a single major, and/or to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

When students cannot meet the requirements of multiple majors without overlaps, the secondary major (http://exploreddegrees.stanford.edu/undergraduatedegreesandprograms/#themajortext), may be relevant.

**Secondary Major**

In some cases, students may complete course requirements for more than one major, but they may not meet the requirements outlined for the multiple major option. For example, the student may develop a course plan in which courses requisite for one major overlap with requirements for another. In these cases, the student may declare a secondary major which results in the transcript bearing an annotation that the course requirements for that major have also been met. Secondary majors are not listed on the diploma. Students declare secondary majors through the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program (https://stanford.box.com/change-UG-program).

**Joint Major Program**

A joint major differs from a multiple major in that 1-2 fewer optional courses are required for each major, while an integrative senior capstone experience is required for all students in the program. Fourteen joint major programs were approved for a six-year pilot beginning in Autumn Quarter, 2014-15. See the “Joint Major (p. 31)” section of this bulletin for details.

**Foreign Language Proficiency**

The notation "proficiency in (language)" appears on the official transcripts of those students whose levels of achievement are found by procedures established by the Language Center to be roughly equivalent to knowledge an excellent student can be expected to demonstrate late in the third quarter of the third year of study in that language.

**The Joint Major Program (JMP)**

The University offers a joint major program (JMP) aimed at integrating the Humanities and Computer Science while providing students with unique educational experiences. This experimental program was approved by the Academic Senate for a six-year pilot, which began in Autumn Quarter 2014-15. All of these joint major programs involve Computer Science along with one humanities major chosen from among fourteen approved majors.

Each of the new joint major programs leads to conferral of a B.A.S. (Bachelor of Arts and Sciences), and are distinct from multiple degrees in which a student may formally declare more than one major within a single bachelor's degree (B.A., B.S., or B.A.S.) program.

The following fourteen programs are currently offered (each major is linked to the department’s bulletin site with specific information for that major):
• Computer Science (p. 278) and Art Practice (p. 389)
• Computer Science (p. 278) and Classics (p. 437)
• Computer Science (p. 278) and Comparative Literature (p. 453)
• Computer Science (p. 278) and English (p. 453)
• Computer Science (p. 278) and French (p. 542)
• Computer Science (p. 278) and German Studies (p. 557)
• Computer Science (p. 278) and History (p. 587)
• Computer Science (p. 278) and Iberian and Latin American Cultures (p. 600)
• Computer Science (p. 278) and Italian (p. 542)
• Computer Science (p. 278) and Linguistics (p. 644)
• Computer Science (p. 278) and Music (p. 665)
• Computer Science (p. 278) and Philosophy (p. 676)
• Computer Science (p. 278) and Slavic Languages and Literatures (p. 737)
• Computer Science (p. 278) and Spanish (p. 600)

Only a limited number of joint majors have been approved by the Academic Senate. Assessment of the joint major program will continue throughout the duration of the six-year pilot, and decisions will be made about continuation, termination, and/or expansion of the program at the end of the pilot. The School of Humanities and Sciences is limiting participation in the pilot to Humanities departments that wish to propose a joint major with Computer Science. Only approved joint majors as listed in this bulletin are available. Other combinations of majors may be taken as a multiple major, but are not part of the joint major program with its special rules and requirements.

Requirements for Joint Majors

Typically a student in a joint major program will have an adviser in each major.

Graduation with a joint major requires the completion of a minimum of 180 units, of which at least 135 must be completed at Stanford. The specific number of units required for each major is specific to that major. It is not possible to give a single absolute number of units that a student might require in order to graduate with a joint major.

A student who declares a joint major completes the degree requirements for each of the majors. However, each of the majors in a joint major program typically requires 1-2 fewer optional courses; see the "Joint Major" sections of the respective departments for details. This course reduction in the joint major program differs from a multiple major in which all courses in both majors must be completed.

Because the joint major programs are designed to allow a student to pursue a course of study leading to mastery in two fields by blending the intellectual traditions of two Stanford departments, students in a joint major program take a senior capstone experience such as a course or project that is integrative in nature. Although the integrative capstone experience may fulfill the requirement for a capstone experience for both majors, the units may only be counted toward the required total units in one of the majors.

It is possible, with approval of both departments, to use one course to fulfill a requirement for each major in a joint major program. University policy prohibits double counting of courses in multiple programs except in specific cases such as introductory skill requirements or overlapping courses that enable a student to meet University requirements such as GERS. Therefore, when a single course fulfills requirements in both majors, a student may apply the units associated with the course to the total units requirement of only one of the majors and then must work with the other major to identify another course that would benefit the academic plan and whose associated units may be applied to that major's total units requirement.

Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (https://stanford.box.com/change-UG-program) The Major-Minor and Multiple Major Course Approval Form (https://stanford.box.com/MajMin-MultMaj) is required for graduation for students with a joint major.

Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (https://stanford.box.com/change-UG-program). Students may also consult the Student Services Center (http://studentservicescenter.stanford.edu) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

Undergraduate Minor

Students completing a bachelor’s degree may elect to complete one or more minors in addition to the major. Minors must be officially declared by students no later than the deadline for their application(s) to graduate, according to declaration procedures developed and monitored by the Registrar. Earlier deadlines for declaration of the minor may be set by the offering school or department. Satisfactory completion of declared minors is noted on the student’s transcript after degree conferral.

A minor is a coherent program of study defined by the department or degree program. It may be a limited version of a major concentration or a specialized subset of a field. A minor consists of no fewer than six courses of 3 or more units to a maximum of 36 units of letter-graded work, except where letter grades are not offered. Departments and degree programs establish the structure and requirements of each minor in accordance with the policy above and within specific guidelines developed by the deans of schools. Programs which do not offer undergraduate degrees may also make proposals to their cognizant deans to establish a minor. Requirements for each minor are described in the individual department or program listings in this bulletin.

Students may not overlap (double-count) courses for completing major and minor requirements, unless:

1. Overlapping courses constitute introductory skill requirements (for example, introductory math or a foreign language), or
2. Overlapping courses enable the student to meet school requirements. However, courses used for the major and/or the minor depth/core must not be duplicated within any other of the student’s degree programs (for example, for a major within the School of Engineering and a minor within or outside of the School of Engineering). Currently, only the School of Engineering has school requirements for its undergraduate majors.

Undergraduates use Axess to declare or drop a minor. The Major-Minor and Multiple Major Course Approval Form (https://stanford.app.box.com/v/majmin-multmaj) is required for graduation for students with a minor. The form should be submitted to the Student Services Center (https://studentservicescenter.stanford.edu) by the final study list deadline of the quarter of intended graduation.

Students with questions about declaring minors or double-counting courses towards combinations of majors and/or minors should consult with the departments or programs involved or the Student Services Center. For academic advising regarding minors, students should
consult the Undergraduate Advising and Research Office (https://undergrad.stanford.edu) (UAR).

**Baccalaureate Honors**

**With Distinction**

In recognition of high scholastic attainment, the University, upon recommendation of a major department or program, awards the Bachelor’s Degree with Distinction. Distinction is awarded to 15% of the graduating class based on cumulative grade point averages. GPA for Distinction purposes is calculated through Winter Quarter for each graduating class. Distinction is awarded at the end of the Spring Quarter for graduates of the Spring Quarter and prior Summer, Autumn, Winter quarters. Students are notified of Distinction on their diploma. Students who are granted Distinction, and have already received their diploma in a prior quarter, will be mailed an updated diploma. The Distinction notation will show on official transcripts after Spring Commencement.

Students are also urged to consider the departmental honors programs that may give depth to their major study and to consider, as well, how the interdisciplinary honors programs might contribute to the quality of their undergraduate education.

**Departmental Honors Programs**

In recognition of successful completion of special advanced work, departments may recommend their students for honors in the major. Departmental honors programs demand independent creative work at an advanced level in addition to major requirements. If approved for departmental honors, the student should declare the Honors degree through Axess.

**Interdisciplinary Honors Programs**

In recognition of successful completion of honors program requirements, the following interdisciplinary programs can recommend students majoring in any field for honors in their program:

- Arts (http://artsinstitute.stanford.edu/programs/honors-in-the-arts-program)
- Comparative Studies in Race and Ethnicity (http://csre.stanford.edu/honors.php)
- Democracy, Development, and the Rule of Law (http://cddl.stanford.edu/fellowships/cddl_undergraduate_honors_program) (CDDL)
- Education (https://ed.stanford.edu/academics/undergraduate/honors)
- Environmental Science, Technology, and Policy (http://woods.stanford.edu/educating-leaders/education/goldman-honors-program)
- Feminist, Gender, and Sexuality Studies (https://feminist.stanford.edu/undergraduates/honors-program)
- International Security Studies (http://cisac.stanford.edu/docs/undergraduate_honors_program) (CISAC)
- Latin American Studies (http://las.stanford.edu/programs/undergraduate-honors)

The interdisciplinary honors programs are designed to complement study in a department major. The requirements for these honors programs are described in the department sections of this bulletin. If approved for interdisciplinary honors, the student should submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program form (https://stanford.box.com/change-UG-program) to the Student Services Center (https://studentservicescenter.stanford.edu) to declare the Interdisciplinary Honors Program.

**General Education Requirements**

Note: Undergraduates admitted prior to 2013-14 and late should consult the “General Education Requirements through 2012-13” (http://exploredegrees.stanford.edu/archive/2015-16/undergraduate_degrees_and_programs/#gerstext) in the Stanford Bulletin 2015-16. Such students seeking to change to the current GER requirements should consult the “Changing from GERs to Ways Requirement” section below.

In order to graduate, undergraduates must complete the following General Education Requirements:

- Thinking Matters Requirement
- Ways of Thinking/Ways of Doing (Ways) Requirement
  - Writing and Rhetoric Requirement
    - Program in Writing and Rhetoric (2 courses required, PWR 1 and PWR 2)
    - Writing in the Major
    - Language Requirement

**Purpose**

The General Education Requirements are an integral part of undergraduate education at Stanford. Their purpose is to introduce students to the intellectual life of the University, to foreground important questions, and to illustrate how they may be approached from multiple perspectives. They are intended to develop a broad set of essential intellectual and social competencies of enduring value no matter what field a student eventually pursues. Students have flexibility to select topics that appeal to them while building critical skills, exploring interests, forming relationships with faculty and peers, and forging connections between educational experiences in many spheres. Together with the major, the requirements serve as the nucleus around which students build their four years at Stanford.

General Education Requirement courses must be taken for a letter grade and a minimum of 3 units of credit, with the exception of courses taken to fulfill the Language requirement, which may be taken for credit/no credit. Additionally, a course taken to satisfy the Creative Expression Way (Ways CE) may be taken for a minimum of 2 units and must be taken for a letter grade (unless a letter grade is not offered, and the course is only offered for a Satisfactory/No Credit grade).

**Thinking Matters**

Students are required to take one Thinking Matters (THINK) course during their freshman year. Most students take one stand-alone course selected from approximately eight courses offered each quarter.

- THINK courses

  Alternatively, students may take one of two residence-based, year-long programs:

  - Immersion in the Arts: Living in Culture (ITALIC
    (http://explorecourses.stanford.edu/search?q=ITALIC&view=catalog&page=0&academicYear=20162017&collapse=&filter-coursestatus-Active=on&filter-departmentcode-ITALIC=on))
  - Structured Liberal Education (SLE (http://explorecourses.stanford.edu/search?filter-departmentcode-SLE=on&q=SLE&filter-coursestatus-Active=on&filter-catalognumber-SLE=on&academicYear=20162017))

  - Each of these also satisfies at least part of the Writing and Rhetoric Requirement as well as several Ways requirements.
Another option, in Autumn Quarter only, allows students to enroll in Education as Self-Fashioning (ESF) that satisfies the Thinking Matters requirement as well as PWR 1.

### Ways of Thinking/Ways of Doing (Ways)

Entering first-year students must fulfill the Ways general education requirement which is a skills capacity-based approach to fostering breadth rather than a traditional discipline-based approach.

These courses provide students with educational breadth by giving instruction in essential skills and capacities in the areas of:

- Way-A-II: Aesthetic and Interpretive Inquiry
- Way-AQR: Applied Quantitative Reasoning
- Way-CE: Creative Expression
- Way-ED: Engaging Diversity
- Way-FR: Formal Reasoning
- Way-ER: Ethical Reasoning
- Way-A-II: Aesthetic and Interpretive Inquiry
- Way-AQR: Applied Quantitative Reasoning
- Way-CE: Creative Expression
- Way-ED: Engaging Diversity
- Way-FR: Formal Reasoning
- Way-ER: Ethical Reasoning
- Way-SI: Social Inquiry
- Way-SMA: Scientific Method and Analysis

Students are required to take eleven certified Ways courses, with two courses in Way-All, Way-SI, and Way-SMA, and one course in each of the remaining five Ways. Transfer students fulfill the Ways requirement as outlined in the “Transfer Credit for Ways” section below.

Although courses may be certified to fulfill two Ways, a student may only count a course toward one Way in a program of study. Thinking Matters courses typically fulfill a Way. Courses may also count for both major and Ways requirements.

### Transfer Credit for Ways

Transfer students admitted in 2015-16 or later must fulfill a portion of their Ways requirement at Stanford. Transfer students who matriculate with the following number of transfer units must complete the defined number of Ways courses as part of their undergraduate education.

<table>
<thead>
<tr>
<th>Number of Transfer Units</th>
<th>Ways Course Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>90</td>
<td>5 courses certified in 5 different Ways</td>
</tr>
<tr>
<td>75-89</td>
<td>6 courses certified in 6 different Ways</td>
</tr>
<tr>
<td>60-74</td>
<td>7 courses certified in 7 different Ways</td>
</tr>
</tbody>
</table>

Pre-Approval of Courses for Transfer Credit for Ways

Courses taken at another accredited college or university must be pre-approved for Ways certification prior to enrollment in the course. Courses that have not been pre-approved prior to enrollment at another accredited college or university are not eligible for Ways credit.

Students seeking transfer credit should consult the Transfer Credit Procedures page on the Office of the Registrar web site.

### Changing from GERs to Ways Requirement

Students admitted prior to Autumn Quarter 2013-14 are eligible to change to the Ways requirement. In order to change to the Ways system, students must submit the GER to Ways General Education Requirement Change Request.

Students requesting a change to the Ways requirement continue to fulfill the other general education requirements in effect at the time of matriculation; specifically, this includes Thinking Matters or IHUM as relevant to the term of matriculation, writing and rhetoric requirements, and the language requirement. Students who change to the Ways requirement may not revert to the old GER system.

### Language Requirement

To fulfill the Language Requirement, undergraduates are required to complete one year of college-level study or the equivalent in a foreign language.
language. Students may fulfill the requirement in any one of the following ways:

1. Complete three quarters of a first-year, 4-5 units language course at Stanford or the equivalent at another recognized post-secondary institution subject to current University transfer credit policies. Language courses at Stanford may be taken with the Credit/No Credit grading basis, if so offered, to fulfill the requirement.
2. Score 4 or 5 on the Language Advanced Placement (AP) test in one of the following languages: Chinese, French, German, Japanese, Latin, or Spanish. Advanced Placement (AP) tests in foreign literature do not fulfill the requirement.
3. Achieve a satisfactory score on the SAT II Subject Tests in the following languages taken prior to college matriculation:

<table>
<thead>
<tr>
<th>Test Subject</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chinese</td>
<td>630</td>
</tr>
<tr>
<td>French</td>
<td>640</td>
</tr>
<tr>
<td>German</td>
<td>630</td>
</tr>
<tr>
<td>Latin</td>
<td>630</td>
</tr>
<tr>
<td>Spanish</td>
<td>630</td>
</tr>
<tr>
<td>Italian</td>
<td>630</td>
</tr>
<tr>
<td>Japanese</td>
<td>620</td>
</tr>
<tr>
<td>Korean</td>
<td>630</td>
</tr>
<tr>
<td>Hebrew</td>
<td>540</td>
</tr>
</tbody>
</table>
4. Take a diagnostic test in a particular language which either:
   a. Places them out of the requirement, or
   b. Diagnoses them as needing one, two, or three additional quarters of college-level study. In this case, the requirement can then be fulfilled either by passing the required number of quarters of college-level language study at Stanford or the equivalent elsewhere, or by retaking the diagnostic test at a later date and placing out of the requirement.

Written placements are offered online throughout the summer in Chinese, French, German, Italian, Japanese, Russian, Spanish, and Spanish for home background speakers.

For a full description of Language Center offerings, see the "Language Center" section of this bulletin under the school of Humanities and Sciences.

Writing and Rhetoric Requirement

All instructors at Stanford University expect students to express themselves effectively in writing and speech. The Writing and Rhetoric requirement helps students meet those high expectations.

All candidates for the bachelor’s degree, regardless of the date of matriculation, must satisfy the Writing and Rhetoric requirement. Transfer students are individually reviewed at the time of matriculation, must satisfy the Writing and Rhetoric requirement.

The Writing and Rhetoric requirement includes courses at three levels. The first two levels are described in more detail below. Writing-intensive courses that fulfill the third level, the Writing in the Major (WIM) requirement, are designated under individual department listings.

All undergraduates must satisfy the first-level Writing and Rhetoric requirement (WR 1) in one of five ways:
1. PWR 1: a course emphasizing writing and research-based argument.
2. SLE: writing instruction in connection with the Structured Liberal Education program.
3. ESF: writing instruction in connection with the Education as Self-Fashioning Thinking Matters course.
5. Transfer credit approved by the Office of the University Registrar for this purpose.

All undergraduates must satisfy the second-level Writing and Rhetoric Requirement (WR 2) in one of four ways:
1. PWR 2, a course emphasizing writing, research, and oral presentation of research.
2. SLE: writing and oral presentation instruction in connection with the Structured Liberal Education program.
3. A course offered through a department or program certified as meeting the WR 2 requirement by the Writing and Rhetoric Governance Board. These courses are designated as WRITE 2.
4. Transfer credit approved by the Office of the University Registrar for this purpose.

A complete listing of PWR 1 courses is available each quarter on the PWR (https://undergrad.stanford.edu/programs/pwr) web site and in the PWR office in Sweet Hall, Third Floor. Complete listings of PWR 2 and WRITE 2 courses are available to students on the PWR (https://undergrad.stanford.edu/programs/pwr) web site the quarter before they are scheduled to complete the WR 2 requirement.

For a full description of the Program in Writing and Rhetoric (PWR), see the "Writing and Rhetoric (p. 119)" section of this bulletin under the Vice Provost of Undergraduate Education.

Unit Credit

Activity Courses

For undergraduates, a maximum of 8 units of credit earned in activity courses, regardless of the offering department or if accepted as transfer units, count towards the 180 (225 if dual degrees are being pursued) units required for the bachelor’s degree. All activity courses are offered on a satisfactory/no credit basis.

Courses Taken on Satisfactory/No Credit or Credit/No Credit Basis

A maximum of 36 units of credit (including activity courses) taken at Stanford or its overseas campuses for a “CR” or “S” grade may be applied towards the 180 (225 if dual degrees are being pursued) units required for the bachelor’s degree. The maximum for transfer students is 27 units.

Departments may also limit the number of satisfactory or credit courses accepted towards the requirements for a major. Satisfactory/Credit courses applied towards a minor may be similarly limited. Courses not letter-graded are not accepted in fulfillment of the General Education Requirements, except for Ways-CE (see the "General Education Requirements/Ways (p. 33)" section of this bulletin for further information). Writing in the Major courses are usually offered letter grade only. In those instances where the course is offered for a letter grade or CR/NC, the course must be taken for a letter grade to fulfill Ways of Thinking/Ways of Doing requirement and Writing in the Major requirement.

Internship Credit Guidelines

Undergraduate internships should not by themselves carry any credit. However, an individual student may arrange with a faculty member for a research or other academic project to be based on the internship. Arrangements between students and faculty regarding credit are expected to be made in advance of the internship. Credit should be arranged within departmental rules for directed reading or independent
study and should meet the usual department standards. No transfer credit is awarded for internships.

**Concurrent Enrollment (Undergraduate)**

Undergraduates may enroll concurrently at Stanford and at another college or university. The following policies apply to concurrent enrollment:

1. Students may not exceed 20 quarter units between both schools. This is the same unit maximum for undergraduates at Stanford. (One semester credit or hour generally equals 1.5 quarter units.)
2. Satisfactory academic progress is determined only by Stanford courses and units. Transfer work completed at other institutions is not considered in this calculation.
3. Students are expected to submit a Request for Transfer Credit Evaluation (https://stanford.box.com/xfer-credit-request) for pre-approval of transfer credit prior to enrolling in the transfer institution.

**Advanced Placement**

Stanford University allows up to 45 units of external credit (90 units for transfer students) toward graduation including work completed in high school as part of the College Board Advanced Placement curriculum. The awarding of such credit is based on Advanced Placement test scores and is subject to University and department approval.

The faculty of a given department determine whether any credit toward the 180-unit requirement can be based on achievement in the College Board Advanced Placement Program in their discipline. Stanford departments electing to accept the Advanced Placement (AP) credit are bound by these University policies:

1. Credit is usually granted for an AP score of 4 or 5. Usually, 10 quarter units are awarded (but occasionally fewer than 10). No more than 10 quarter units may be awarded.
2. Whether credit is to be given for an AP score of 3 is a matter for departmental discretion; up to 10 units may be awarded.
3. No credit may be authorized for an AP score lower than 3.

Performance on an AP exam can indicate the appropriate placement for continuing course work in that subject at Stanford. If students enroll in courses at Stanford for which they received equivalent AP credit, the duplicating AP credit will be removed. The chart below shows the current AP credit and placement policies.

A maximum of 45 quarter units of Advanced Placement (AP), transfer credit, and/or other external credit (such as International Baccalaureate) may be applied toward the undergraduate degree. More than 45 units of AP, transfer, and other external credit may appear on the Stanford University transcript; however, only 45 units can be applied to the minimum units required for the undergraduate degree. Once credit has been posted it cannot be removed from the student record. However, if Stanford courses are taken below the level of the placement course, the duplicating AP units are removed. Students may not receive duplicate unit credit for AP and IB exams in the same discipline, and the duplicating unit credit may be removed from the student's record. Stanford University policies on AP and other external credit are subject to review and change on an annual basis. Subjects not listed on this chart are not eligible for AP credit at Stanford University. Students may only receive AP credit for the AP policies that were effective during their matriculation year at Stanford.

Further information is available from the Student Services Center (https://studentservicescenter.stanford.edu) or on the Registrar’s (https://registrar.stanford.edu/students/transfer-credit/advanced-placement) web site.

</tr>
</tbody>
</table>
Physics C E&M only 4 PHYSICS 41, PHYSICS 43, and PHYSICS 45; or PHYSICS 21 and PHYSICS 25 4

Physics C Both Parts 5 PHYSICS 45 or PHYSICS 25 10

Physics C Both Parts 4 PHYSICS 41, PHYSICS 43, and PHYSICS 45; or PHYSICS 21 and PHYSICS 25 8

Spanish (Language)* 5 Take placement exam if continuing in this language 10

Physics 1 & 2, Both Parts*** 9,10 PHYSICS 25 10

Physics 1 & 2, Both Parts*** 8 PHYSICS 23 and 25 5

* A score of 4 or 5 on this test fulfills the Language Requirement. A score of 5 is required to receive 10 units of credit.

** Starting for freshman entering Stanford in 2016-17, Stanford accepts PHYSICS 1 and 2; this rule is not retroactive to previous years. Students must have taken both PHYSICS 1 and 2 to receive credit along with scoring a minimum of 4 on each exam. The standard rules apply such that students cannot receive credit for multiple exams taken within the same subject. The best score and or unit rate is applied to the transcript of Physics. If a student wants to have a certain Physics exam reflected on the transcript, s/he should contact the Student Services Center (https://helpsu.stanford.edu/helpsu/form?pcat=StuAcct&dtag=10983).

*** Students are eligible for Physics B, Physics C (both), or Physics 1 & 2, however not a combination of the three. For more information on these exams, see the Physics Department’s Physics (https://physics.stanford.edu/undergraduate-program/advanced-placement) Advanced Placement web site.

International Baccalaureate (IB) Transfer Credit

Stanford University awards advanced placement credit for certain International Baccalaureate (IB) and international advanced placement subject examinations. The international test subjects must match the content of the College Board Advanced Placement test subjects that receive advanced placement credit. See the Registrar’s web site for detailed information (https://registrar.stanford.edu/students/transfer-credit-and-advanced-placement/advanced-placement/ib-credit-chart).

A maximum of 45 quarter units of transfer and test credit may be applied toward the undergraduate degree. Only higher level IB exams with scores of 5 or higher, in the subjects listed below, are eligible for credit. Subjects not listed on this chart are not eligible for IB credit. Scores of 5 or higher on language IB exams fulfill the language requirement. If Stanford courses are taken below the level of the placement course, the duplicating IB units will be removed. Students may not receive duplicate unit credit for AP and IB exams in the same discipline, and the duplicating unit credit may be removed from the student’s record.

* A score of 5 on this test fulfills the Language Requirement. A score of 5 is required to receive 10 units of credit.

** Enrollment may require taking the Math Placement Diagnostic. See the Math Placement (http://mathematics.stanford.edu/academics/undergraduate/math-placement/) web site for more information and a link to take the diagnostic.

Undergraduate Transfer Work

Academic credit for work done elsewhere may be allowed toward a Stanford bachelor’s degree under the following rules and conditions:

1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are regionally accredited.
2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor’s degree, subject to the approval of the credit evaluator and the appropriate departments. See the Registrar’s web site (https://registrar.stanford.edu/students/transfer-credit) for additional information regarding transfer credit requests for course work completed abroad.
3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned. In order for transfer credit to be awarded, students must submit an official transcript that clearly indicates all of the below information for each course:
   • Course codes/numbers
   • Course titles or descriptions
   • Final grades earned
   • Course credits earned
5. Credit from another institution may be transferred for courses which are substantially equivalent to those offered at Stanford University.
on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific undergraduate courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.

6. Course work cannot duplicate, overlap, or regress previous work.

7. Transfer course work cannot count towards secondary school diploma and/or graduation requirements.

8. For students interested in fulfilling a Ways of Thinking/Doing (Ways) breadth requirement through transfer work, transfer courses are reviewed to determine if courses can be certified to fulfill Ways requirements. Requests for fulfilling Ways requirements in transfer require pre-approval prior to course enrollment and the pre-approval requests must be submitted by the quarterly deadline in the quarter prior to the term in which students intend to enroll in the transfer course, as defined on the Ways (https://undergrad.stanford.edu/programs/ways/getting-credit/ways-credit-classes-taken-other-us-universities) website. Courses must be taken for a minimum of 3 quarter units (2 units in the case of Creative Expression only) and must be taken for a letter grade.

For transfer students admitted in 2015-16 and later, a proportion of their Ways requirement must be fulfilled at Stanford. Based on the number of qualified transfer units awarded at matriculation, students must complete a number of Ways courses to fulfill the Ways requirement as outlined in the “Transfer Credit for Ways (p. 33)” section of this bulletin.

For students who are subject to the previous GER system in place prior to Autumn 2013-14 who want to fulfill general education requirements through transfer work, a proposed transfer course must match a specific Stanford course that fulfills the same GER requirement; it must be a minimum of 3 quarter units and have been taken for a letter grade.

9. Transfer work can be used to satisfy a department major or minor requirement. The transfer work must first be officially accepted into the University through the Office of the University Registrar. After the transfer credit has been approved and posted by the Office of the University Registrar, the departments determine if the approved transfer work can be used to satisfy a department major or minor requirement.

10. The credit allowed at Stanford for one quarter’s work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.

11. Credit is allowed at Stanford for work graded ‘C’ (or better) or ‘Pass’ (where ‘Pass’ is equivalent to a letter grade of ‘C’ or above), but not for work graded ‘D’ or below.

12. No more than 45 (90 for transfer students) quarter units of credit for work done elsewhere may be counted toward a bachelor’s degree at Stanford (including advanced placement test credit).

13. Credit earned in extension, correspondence, and online courses is transferable only if the university offering the courses allows that credit toward its own bachelor’s degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence and online study, and a maximum of 45 quarter units for the combination of extension, correspondence, and online courses. Online and independent study courses are not eligible for Ways credit.

14. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

See the Registrar’s website (https://registrar.stanford.edu/students/transfer-credit-and-advanced-placement/transfer-credit-policies) for additional information regarding transfer credit policies and procedures.

Special Registration Statuses (Undergraduate)

The following reduced-tuition categories can be requested by undergraduates in the final stages of their degree program:

**Permit to Attend for Services Only (PSO)**

Undergraduates in their terminal quarter who are completing honors theses, clearing incomplete grades, or have completed all requirements and are requiring a registration status to utilize university resources, may petition one time only for PSO status. PSO does not permit any course enrollment. Students must apply to graduate through Axess if applying for the PSO special registration status. The deadline for the completed PSO petition (https://stanford.box.com/PSO) is the Preliminary Study List (https://registrar.stanford.edu/students/enrolling-courses/preliminary-study-list-deadline-courses-or-units) deadline of the applicable quarter.

**13th Quarter**

Undergraduates who have completed at least twelve full-time quarters may petition to register for 13th Quarter registration status at a reduced tuition rate for their final quarter, but must register for at least eight units. Undergraduate dual degree students must complete at least fifteen full-time quarters before petitioning for reduced tuition in their final quarter. Students receiving financial aid should check with the Financial Aid Office for eligibility if they are seeking aid beyond 12 quarters of enrollment. Undergraduates must apply to graduate through Axess if applying for the 13th-quarter special registration status.

**Last Units out of Residence**

Students may petition to complete their final 15 units out of residence to complete their degree requirements. The final 15 units of transfer credit must meet the criteria in the undergraduate "Transfer Work (p. 37)" section of this bulletin. Students must submit the Request for Last Units Out of Residence Petition (https://stanford.box.com/last-units-out-of-residence) to determine eligibility and to request pre-approval of the transfer work. A registration status is required to graduate. Students should select either the Graduation Quarter or the Permit for Services Only special registration status on the Last Units Out of Residence petition. Refer to the Special Registration Status section of the bulletin for a description of these statuses. An application to graduate should be submitted through Axess.

**Graduation Quarter**

Undergraduates may petition one time only for Graduation Quarter in their terminal quarter only if:

1. filing a Request for Last Units Out of Residence (https://stanford.box.com/last-units-out-of-residence) in order to complete up to 15 final units at another institution; or
2. returning from a discontinued status and filing a Request to Return and Register in Undergraduate Study (https://undergrad.stanford.edu/planning/academic-policies/returning-students) in order to confer their degree; or
3. if all degree requirements, including honors theses, have been completed and student requires a registration status to graduate, but will not be using University resources or housing.

Coterminal students are only eligible for the Graduation Quarter special registration status if they are applying to confer both the undergraduate and graduate degree in the same quarter. Undergraduates may be eligible for Graduation Quarter status in these three situations only if the student has completed all graduation requirements and will not be utilizing University resources, including housing. The deadline for the completed Graduation Quarter petition (https://stanford.box.com/grad-qtr-ug) is the Preliminary Study List (https://registrar.stanford.edu/students/enrolling-
courses/preliminary-study-list-deadline-courses-or-units) deadline of
domestic quarters. Undergraduates must apply to graduate through
Axsess if applying for the Graduation Quarter special registration status.

Minimum Progress for Undergraduates

Undergraduates are expected to finish their degree requirements in a
timely fashion. In addition to maintaining academic progress obligations,
students are expected to take courses to progress towards a Bachelor of
Arts or a Bachelor of Science. If after 12 quarters, an undergraduate is not
on track to complete degree requirements and graduate within the next
two quarters, the University may impose requirements with deadlines
on a student’s course of study. Further, if a student fails to meet those
imposed requirements and/or has not after 18 quarters completed all
degree requirements, the University may discontinue the student for
failure to progress.

Leaves of Absence and Reinstatement
(Undergraduate)

A Leave of Absence allows a student to take a break from enrollment
either before or after a quarter begins. There may also be conditions
associated with a Leave, which are outlined in greater detail below.
Undergraduates are admitted to Stanford University with the expectation
that they complete their degree programs in a reasonable amount of time,
usually within four years.

Leaves of absence for undergraduates may not exceed a cumulative total
of two years (eight quarters including Summer Quarters).

Students on leave of absence are not registered at Stanford and,
therefore, do not have the rights and privileges of registered students.
They cannot fulfill any official department or University requirements
during the leave period. Students on leave may complete course work for
which an 'Incomplete' grade was awarded in a prior term (unless doing so
places an undue burden on the part of an instructor, department, staff, or
other university resource) and are expected to comply with the maximum
one-year time limit for resolving incompletes; a leave of absence does not
stop the clock on the time limit for resolving incompletes.

New freshmen and transfers are required to register in Autumn Quarter
and may not take a leave of absence prior to their first quarter. However,
new undergraduate students may request a deferralment from the Office of
Undergraduate Admission before the first day of Autumn Quarter. Under
rare and exceptional circumstances, new freshmen and transfers may
take a leave of absence during their first quarter with the permission of
the Vice Provost for Undergraduate Education (or his or her designee).
When circumstances arise which make it advisable or necessary for
freshmen to take a leave of absence during any of their first three
quarters, the student is required to wait until Autumn Quarter of the
following academic year to return.

Voluntary Leave

Students have the option of taking a voluntary leave of absence for up to
one year, or four quarters, upon filing a Leave of Absence form with the
Office of the University Registrar and receiving approval. Except where
unexpected circumstances necessitate an immediate leave, students are
expected to file for a voluntary leave of absence 30 days prior to the
quarter in which the leave will begin. The leave may be extended for up
to one additional year, or four quarters, provided the student files (before
the end of the initial one-year leave) a Leave of Absence form (https://
stanford.box.com/leaveofabsence) for the leave extension with the Office of
the University Registrar and receives approval. Leaves requested
for a longer period than one year, or four quarters, are approved only in
exceptional circumstances (for example, mandatory military service).
Leaves of absence for undergraduate students may not exceed a
cumulative total of two years (eight quarters including summer quarters).

Undergraduates who take an approved leave of absence while in good
standing from a quarter for which they have registered in advance and
do not wish to attend may enroll in the University for the subsequent
quarter with the privileges of a continuing student. For undergraduates
who wish to withdraw from the current quarter after the beginning
of the term, courses in which the student was enrolled after the final
study list deadline appear on the student’s transcript and show the
symbol ‘W’ (withdraw). For additional information regarding satisfactory
academic progress, refer to the "Academic Progress" section of this
bulletin. In either situation, the University may condition its approval of a
petition for leave of absence on the student’s meeting such requirements
as the University deems appropriate in the individual case for the
student to be eligible to return (such as, in the case of a leave for
medical reasons, proof of treatment and/or an interview with a provider
at Vaden Health Center (http://vaden.stanford.edu) or Counseling
and Psychological Services (https://vaden.stanford.edu/caps-and
wellness/counseling-and-psychological-services-caps) or its designee).
Undergraduates who wish to withdraw from the current quarter, or from
a quarter for which they have registered in advance and do not wish to
attend, must file a Leave of Absence form (https://stanford.box.com/
leaveofabsence) with and receive approval from the Office of the Vice
Provost for Undergraduate Education, via the Office of Undergraduate
Advising and Research (UAR), Sweet Hall.

Information on tuition refunds is available in the "Refunds (p. 27)" section
of this bulletin. For a full refund, petitions must be received by the Office
of the University Registrar no later than the first day of classes for the
quarter.

Dean’s Leave of Absence

While the University provides a wide range of services to support
and address the mental and physical health of students, in some
circumstances a student may be unable to perform the basic academic
and/or nonacademic activities of student life, or the level of care required
for a particular student may exceed the resources and staffing that a
university can be expected to provide. Under such circumstances, a
voluntary or mandatory leave of absence may be necessary.

A student may be placed on a Dean’s Leave of Absence following an
individualized assessment, when the University determines in the
exercise of its judgment that a student reasonably meets one or more of
the following criteria. The student:

• presents a substantial risk of harm to self or others or has engaged in
threatening or violent activities;

• significantly disrupts the educational or other activities of the
University community;

• is unable or unwilling to carry out substantial self-care obligations or
to participate meaningfully in educational activities; or

• requires a level of care from the University community that exceeds
the resources and staffing that the University can reasonably be
expected to provide for a student’s well-being.

Students whose circumstances warrant a review under the Dean’s
Mandatory Leave of Absence Policy, will be apprised, in writing, of
University concerns by the Dean of Students Office and will be provided
an opportunity to respond to concerns in writing or in person or via
telephone before a review committee convened by the Dean of Students
Office. Students placed on a Dean’s Leave of Absence can appeal
an unfavorable decision to the Vice Provost for Student Affairs. The
University can condition a student’s return to registered student status
on such requirements as the University deems appropriate in the
individual case (such as, in the case of a leave for medical reasons,
proof of treatment of an interview with a health care professional at
Vaden Health Center (http://vaden.stanford.edu) or Counseling and

When a student is granted or placed on a leave of absence after the beginning of the term, courses in which the student was enrolled after the final study list deadline appear on the student’s transcript and show the symbol ‘W’ (withdraw). For additional information regarding satisfactory academic progress, refer to the “Academic Progress (p. 74)” section of this bulletin. Information on tuition refunds is available in the “Refunds (p. 27)” section of this bulletin.

**Discontinuation and Reinstatement**

A student’s academic degree program may be discontinued if the student:

- fails to be enrolled by the study list deadline; or
- fails to be approved for a leave of absence by the start of the term; or
- voluntarily terminates undergraduate studies; or
- is dismissed for academic reasons; or
- is expelled from the University.

Students who fail to be either enrolled by the final study list deadline, or have exceeded their eight quarters of approved leave, or who fail to submit a Leave of Absence petition by the published deadline, must apply for reinstatement through the Request to Return and Register in Undergraduate Study. The University is not obliged to approve reinstatements of students. Applications for reinstatement are reviewed by the Vice Provost for Undergraduate Education and are subject to the approval of the Faculty Senate Committee on Undergraduate Standards and Policy or its designee. The Committee or its designee may determine whether the application for reinstatement will be approved or not, and/or the conditions a student must meet in order to be reinstated. Reinstatement decisions are in the discretion of the University and may be based on the applicant’s status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, as well as any other factors or considerations regarded as relevant to the Vice Provost for Undergraduate Education, the Committee, or their designee.

Applications for reinstatement through the Request to Return and Register in Undergraduate Study (https://undergrad.stanford.edu/planning/academic-policies/returning-students), must be submitted eight weeks prior to the start of the term in which the student seeks to enroll in classes. Information and instructions may be obtained by contacting the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising Research (UAR), Sweet Hall.

Students who have been expelled from Stanford University are not permitted to apply for reinstatement.

Students who wish to terminate their study as undergraduates (e.g., for transfer to another institution) should submit a properly endorsed Request to Permanently Withdraw from Degree Program form (https://stanford.box.com/permanent-withdraw) to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. In this instance, applications for reinstatement through the Request to Return and Register in Undergraduate Study are not appropriate. Any student wishing then to return to undergraduate study at Stanford is required to apply as a transfer student through the Office of Undergraduate Admission, and such re-admission is not guaranteed.

Leaves of absence and reinstatement of graduate students are addressed in the “Graduate Degrees (p. 50)” section of this bulletin.

---

**Conferral of Degrees**

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Undergraduate Standards and Policy, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer quarters. All diplomas, however, are prepared and distributed after degree conferral in accordance to the distribution dates listed on the Registrar’s Office (https://registrar.stanford.edu/students/diplomas) web site.

Students must apply for conferral of an undergraduate or graduate degree by filing an Application to Graduate through Axess by the deadline for each term. The deadlines are published in the Academic Calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). A separate application must be filed for each degree program and for each conferral term.

Requests for conferral are reviewed by the Office of the University Registrar and the student’s department, to verify completion of degree requirements. Registration is required in the conferral term. Students with unmet financial or other University obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released. An academic record where no other degree objective is being pursued is permanently frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

Students are typically expected to apply to graduate when they have completed their degree requirements. The University, however, reserves the right to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University’s usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should notify the Student Services Center (https://studentservicescenter.stanford.edu) in writing through the Withdrawal of Application to Graduate Form (https://registrar.stanford.edu/resources-and-help/forms/graduation-and-commencement-forms) by the late application to graduate deadline on the academic calendar. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

Stanford University awards no honorary degrees.
# UNDERGRADUATE MAJOR UNIT REQUIREMENTS

## Undergraduate Major Unit Requirements

The Writing in the Major (WIM) courses listed below reflect courses, offered in past or present years, which satisfy the WIM requirement for majors applying to graduate in the current academic year. Such WIM courses may or may not be offered in the current year. Consult the applicable department section of the Bulletin or ExploreCourses (http://explorecourses.stanford.edu) for more information.

COTERMINAL DEGREES

The coterminal degree program allows undergraduates to study for a Master of Arts (M.A.) or Master of Science (M.S.) degree while completing their bachelor's degree(s) in the same or a different department. To qualify for both degrees, a student must complete requirements for both the bachelor's degree (p. 29) and the master's degree (p. 50) as described under their respective sections of this bulletin.

Application and Admission to a Coterminal Master's Program

Undergraduates with strong academic records may apply for admission to a Stanford Master of Arts (M.A.) or Master of Science (M.S.) program (p. 50) that offers coterminal admission via the process outlined below. Any master's degree granting program may elect not to offer coterminal admission.

Eligibility Requirements

An undergraduate is eligible to apply for admission to a coterminal program once all of the following conditions have been met:

- Completion of 120 units towards graduation as shown on the undergraduate transcript, including credit earned from transfer credit, Advanced Placement exams, and other external test credit.
- Completion of six non-Summer quarters at Stanford; or two non-Summer quarters at Stanford for transfer students.
- Declaration of an undergraduate major.
- An admitted coterminal student must have a minimum of one quarter overlap between the undergraduate and graduate degree programs. If this is not possible, students should consider applying as an external candidate via the Graduate Admissions (http://exploredegrees.stanford.edu/admissionandfinancialaid/#graduatetext) process. Such applicants are not coterminal students and coterminal policies do not apply.
- Students may apply to one coterm program per quarter, and may not apply to another coterm master's program until the admissions process for the initial application has been completed, including the student’s response to the offer of admission (if admitted).

Note: departments may have additional eligibility requirements, so students are encouraged to check with the department prior to applying for the coterm program.

Undergraduates interested in applying to a coterm program should contact the coordinator of coterminal advising in Undergraduate Advising and Research (UAR) (http://exploredegrees.stanford.edu/undergraduateeducation/uar).

Application Deadlines

Applicants must meet all requirements and deadlines established by the department or program to which they are applying. While application deadlines may vary by department and program, coterm applications should be submitted to departments early enough to give departments ample time to review applications thoroughly and to make a decision regarding admission.

Applicants submit their completed coterm application to their department and, if admitted, respond to the offer of admission no later than the quarter prior to the expected completion of their undergraduate degree.

Approved coterminal applications are processed every quarter, and should thus be submitted to the Registrar’s Office by the department for processing no later than the last day of classes of the quarter prior to the coterm matriculation quarter. Please refer to the below deadlines:

- For Autumn 2017-18 Quarter coterm matriculation, approved applications must be submitted to the Office of the University Registrar by: August 17, 2017
- For Winter 2017-18 Quarter coterm matriculation, approved applications must be submitted to the Office of the University Registrar by: December 8, 2017
- For Spring 2017-18 Quarter coterm matriculation, approved applications must be submitted to the Office of the University Registrar by: March 16, 2018
- For Summer 2017-18 Quarter coterm matriculation, approved applications must be submitted to the Office of the University Registrar by: June 6, 2018

Application Fee

Students who accept an offer of admission and are matriculated into the graduate degree program are assessed a $125 coterm application fee.

Application Process

To apply for admission to a coterminal master’s program, students must submit all of the following to the prospective graduate department:

- Coterm Application (https://www.applyweb.com/stanterm)(online), available mid-September
  - Please see the Coterm Application Information page (https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm/coterm-application-information) for links to department web sites for additional application requirements
- Statement of purpose
- Preliminary program proposal (https://stanford.app.box.com/v/progpropna)
- Undergraduate Coterm Application Approval form (https://stanford.app.box.com/v/ug-coterm-application-approval) (submitted with online coterm application)
- Two letters of recommendation from Stanford professors
- Current Stanford transcript

Note: Graduate Record Examination (GRE) scores and additional requirements may be specified by the prospective program, and may be found in the bulletin and on department websites (links to department websites found on the Registrar’s web site (https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm/coterm-application-information)).

Admission Process

Each department is responsible for its admissions/acceptance decisions for coterminal applicants.

Once a coterm application is approved, the departments must create the coterminal application in Axess (department staff should refer to the Coterminal Resources for Staff (https://registrar.stanford.edu/staff/coterminal-resources-staff) page). Additionally, the department must submit the completed and approved coterm application to the Office of the Registrar no later than the quarter prior to the expected completion of the undergraduate degree.

If the coterminal program permits deferral, students may defer admission to the coterminal program and the first graduate quarter to a later quarter as long as their graduate career has not yet been activated and if the later
matriculation will still meet all University and departmental requirements for coterminal admission.

**Note:** This may require postponement of conferral of the undergraduate degree. If the graduate coterm career has been activated, then deferring to a later term is not an option. Deferral is coordinated with the master's degree program, prior to the program submitting the completed application to the Office of the University Registrar.

### First Graduate Quarter

The first graduate quarter is the quarter in which the coterminal student first matriculates into the master's degree program.

The first graduate quarter does not necessarily correspond to the first quarter in which a student enrolls in a course in the graduate career, nor is it affected by course transfer (please see Coterminal Course Transfer (https://registrar.stanford.edu/students/procedures-coterminal-students/coterm-course-transfer) for additional information).

Admitted students must have at least one quarter of overlap in the undergraduate and graduate career prior to conferring their undergraduate degree. For example, if the first graduate quarter for the coterminal degree is Spring Quarter, then the earliest that the undergraduate degree can be conferred is the Spring Quarter. Once matriculated, students may enroll in graduate courses, however, enrollment in graduate courses is not required by the University in the overlap quarter. Students must submit a completed Program Proposal (https://stanford.app.box.com/v/progpropma) that outlines the graduation/program completion plan by the end of the first graduate quarter.

### Adding or Changing Master’s Degree Programs

The bachelor’s degree must be conferred before a student may apply to add an additional advanced degree program. Adding or changing a graduate program can be done via the Graduate Program Authorization petition. For additional information, see the "Changes of Degree Programs (http://exploredegrees.stanford.edu/graduatedegrees/#degredgprogresstext)" section of this bulletin, the Graduate Program Authorization section (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-1/page-5-1-1) of the Graduate Academic Policies and Procedures site, and the Graduate Program Authorization (https://registrar.stanford.edu/students/graduate-degree-progress/graduate-program-authorization-petition) page on the Registrar’s web site.

Coterminal students who wish to change from one master's degree to another before conferral of the bachelor's degree must submit an approved request to withdraw from the original degree program using the Request to Permanently Withdraw from Degree Program (pdf) (https://stanford.box.com/permanent-withdraw) form, in addition to a completed and approved application for admission to the new program in the same quarter. In this case, all courses, including any prior course transfer from the undergraduate career, remain in the graduate career. The discontinued program is listed on the transcript in a 'Discontinued' status.

**Note:** The new degree program may choose not to approve all courses towards the new master's degree program requirements. The student may elect to transfer courses back to the undergraduate career if the bachelor’s degree has not yet been conferred.

### Residency Requirement

Each type of degree offered at Stanford (for example, Bachelor of Arts, Master of Science) has a requirement, called residency for graduate degrees, based on the minimum number of academic units required for the degree. Requirements are described in the Bachelor of Arts (B.A.), Bachelor of Science (B.S.) (p. 29) and Residency Policy for Graduate Students (p. 57) sections of this bulletin. It is Stanford University's general policy that units are applicable toward only one degree, that is, units may not normally be duplicated or double-counted toward the residency requirement for more than one degree. Courses counted towards the undergraduate degree(s) and graduate degree(s) are separately recorded on the undergraduate and graduate transcripts, respectively.

Students pursuing coterminal bachelor's and master's degrees are expected to meet the minimum requirements for each of the degrees, as follows:

### Undergraduate Degrees

- **Bachelor's degree:** 180 units for the bachelor's degree plus 45 unduplicated units (or higher unit-requirement, as determined by the graduate program) for the master’s degree
- **Dual undergraduate degree:** 225 units for the bachelor's degree plus 45 unduplicated units (or higher unit-requirement, as determined by the graduate program) for the master’s degree

### Master's Degrees

45 units. All 45 units must be from course work completed at Stanford and must be courses at or above the 100-level. Additionally, at least 50 percent of those must be courses designated primarily for graduate students. Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University’s specifications. Students may not petition to change the career for a completed course from the undergraduate to the graduate level.

To a limited extent, coterminal students are permitted to move courses between the undergraduate and graduate careers as described in the "Coterminal Course Transfer (p. 48)" section in the Enrollment and Degree Progress tab of this section of the bulletin.

### Tuition and Tuition Groups

Coterminal students are assigned to either the undergraduate coterminal tuition group or the graduate coterminal tuition group, which dictates whether the student is charged undergraduate or graduate tuition. A student’s tuition group also determines many of the applicable undergraduate and graduate policies and procedures, including degree progression and pre-registration statuses, as well as access to some University services and benefits. A coterminal student is subject to graduate tuition assessment and adjustment policies once placed in the coterminal graduate tuition group. Coterminal students are not eligible for undergraduate special pre-registration statuses (with the exception of Graduation Quarter, if the student is applying to confer both their undergraduate and graduate degrees in the same quarter). Coterminal students may only be eligible to apply for graduate special pre-registration statuses once their undergraduate degrees have been conferred.

Tuition and fee information is available on the Office of the University Registrar tuition web site (https://registrar.stanford.edu/students/tuition-and-fees).

### Undergraduate Coterminal Tuition Group

Coterminal students are normally placed in and remain in the undergraduate coterminal tuition group until the completion of 12 undergraduate full-tuition quarters, or until conferral of the undergraduate degree(s), if that happens earlier. For students with transfer credit (not AP or other test credit), 15 transfer units equals one Stanford quarter. For students with Stanford Summer Session units, 15 units equals one Stanford quarter; units earned in multiple Summer Sessions are not added together in this calculation.
Students in the undergraduate coterminal tuition group are assessed the undergraduate tuition rate, and are subject to the 20 unit maximum enrollment per quarter. Students enrolled in over 20 units are subject to an enrollment hold effective the following quarter.

**Graduate Coterminal Tuition Group**

Coterminal students are automatically moved from the undergraduate to the graduate coterminal tuition group in the 13th quarter (or 16th quarter for students with two undergraduate degrees) and are assessed either the standard graduate tuition rate or the graduate Engineering tuition rate. Students are also moved to the graduate coterminal tuition group after the conferral of all undergraduate degrees.

Coterminal students may request to be moved to the graduate coterminal tuition group prior to the 13th quarter (or 16th quarter for students with two undergraduate degrees) in order to enroll for fewer units as permitted for graduate students, or to be eligible for a teaching (CA/TA) or research assistantship (RA) appointment. Students must request this move through the Student Services Center via a HelpSU ticket (https://helpsu.stanford.edu/helpsu-3.0/helpsu-form?pcat=StuAcct&dtag=10772) by the preliminary study list deadline (first day of classes) for the desired term. Students may request to be moved to the graduate coterminal tuition group under the following conditions:

- Students must have completed 180 undergraduate units, including transfer, Advanced Placement exam, and other external test credit. Students with two undergraduate degrees must have completed 225 units.
- Once students have moved to the graduate coterminal tuition group, they may not move back to the undergraduate coterminal tuition group.

A coterminal student is subject to graduate tuition assessment and adjustment policies once placed in the coterminal graduate tuition group. They may register at the reduced 8-, 9-, or 10-unit tuition rate if their enrollment plans are accepted by the master's degree program. Students whose master's programs are in the School of Engineering are assessed the graduate Engineering rate; all students are assessed additional graduate or Engineering tuition on a per-unit basis beginning with the 19th unit, and are subject to the 24 unit maximum enrollment per quarter. Students holding a 20 hour (50%) teaching or research assistantship may not enroll in more than 10 total units.

Coterminal students are traditionally not eligible for reduced graduate tuition rates below 8 units during Autumn, Winter, and Spring quarters prior to conferral of the undergraduate degree. However, coterminal graduate students with disabilities covered under the Americans with Disabilities Act may enroll in an approved reduced course load as recommended by the Office of Accessible Education (OAE) (https://oae.stanford.edu).

**Coterminal Students with Research or Teaching Assistantships**

Coterminal students wishing to enroll in fewer units (as permitted for graduate students) or who are eligible for a teaching (CA/TA) or research (RA) assistantship appointment may request to be moved prior to their undergraduate degree conferral or 13th quarter (16th quarter for students pursuing two undergraduate degrees) from the undergraduate coterminal tuition group to the graduate coterminal tuition group. Coterm students are eligible to be moved to the graduate coterminal tuition group if:

- Students pursuing one bachelor's degree: must have completed 180 a minimum of undergraduate units*
- Students pursuing two bachelor's degrees: must have completed a minimum of 225 undergraduate units*

*Unit count includes transfer credit, Advanced Placement exam, and other external test credit.

Students holding a 20 hour (50%) teaching or research assistantship may not enroll in more than 10 total units. Additionally, once students have moved to the graduate coterminal tuition group, they may not be moved back to the undergraduate coterminal tuition group even if they no longer hold an assistantship appointment. Please see Administrative Guide Memo 10.2.1 Graduate Student Assistantships (https://adminguide.stanford.edu/chapter-10/subchapter-2/policy-10-2-1), and GAP 7.3 Assistantships (http://gap.stanford.edu/7-3.html), for detailed discussion of assistantship policy.

If interested in moving to the graduate coterminal tuition group, students may submit their request via a HelpSU ticket (https://helpsu.stanford.edu/helpsu-3.0/helpsu-form?pcat=StuAcct&dtag=10772) by the preliminary study list deadline of the desired term.

**Enrollment and Degree Progress**

Starting with the first graduate quarter, students have an active graduate and an active undergraduate career. Students are responsible for enrolling in courses each quarter, and assigning them to the appropriate career. Courses assigned to the graduate career count towards the master's degree and courses assigned to the undergraduate career count towards the bachelor's degree. Students in the undergraduate coterminal tuition group may not enroll in more than a total of 20 units for the quarter across both careers. Students in the graduate coterminal tuition group may not enroll in more than a total of 24 units for the quarter across both careers. Students appointed to a 20-hour (50%) teaching and/or research assistantship may not enroll in more than 10 units.

**Academic Progress**

Prior to the conferral of the undergraduate degree(s), a coterminal student's academic progress is monitored by the coordinator of coterminal advising in the Undergraduate Advising and Research Office (p. 126) (UAR, a unit of the office of the Vice Provost for Undergraduate Education) in conjunction with the student's advisers and the graduate program. After conferral of the undergraduate degree(s), the student's degree progress is monitored by the graduate adviser and graduate program.

All courses taken during a quarter, whether enrolled in the undergraduate or graduate career, are used to assess whether minimum academic progress standards, including number of units enrolled and number of units earned, have been met.

Students in the undergraduate coterminal tuition group are evaluated according to the undergraduate degree progress standards. These standards are described in the "Academic Progress (p. 74)" section of this bulletin.

Students in the graduate coterminal tuition group are evaluated according to the graduate degree progress standards. These standards are described in the "Minimum Progress Requirements for Graduate Students (p. 55)" section of this bulletin.

Student are expected to maintain an undergraduate grade point average (GPA) which meets the University's undergraduate standards, and a graduate GPA which meets University and program requirements for graduate progress. Courses which have been transferred from the undergraduate to the graduate career are calculated as part of the graduate GPA, and vice versa.

**Coterminal Course Transfer**

After accepting admission to a master's degree program, coterminal students may request transfer of Stanford courses from the undergraduate to the graduate career to satisfy requirements for the master's degree and/or from the graduate career to the undergraduate
career to satisfy requirements for the bachelor's degree(s). Transfer of courses between the undergraduate and graduate careers requires review and approval by both the undergraduate and graduate departments.

Unless a master's degree program specifies otherwise in this bulletin, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. Neither Summer Quarter nor quarters spent on approved leave of absence are included in the quarter-back count. In exceptional circumstances, a student may petition the exceptions committee of the Committee on Graduate Studies to transfer courses taken more than three quarters back. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Individual programs have the discretion to set their own policy regarding course transfer for their coterminal master's students, provided that no student counts a course taken earlier than the first quarter of sophomore year. The program's policy is stated in the relevant department or program section of this bulletin.

All course transfer requests must be submitted to the Student Services Center no later than the Final Study List Deadline of the intended bachelor's degree conferential quarter.

Course transfers between careers are not possible after the bachelor's degree has been conferred.

Undergraduate credit from transfer courses or tests may not be transferred to the graduate career.

**Advising, Program Proposal, and Time Limit**

In the first graduate quarter, a coterminal student must be assigned an adviser in the master's program for assistance in planning a program of study to meet the requirements for the master's degree. The plan is outlined on the Program Proposal for a Master's Degree (https://stanford.box.com/v/progpropma), which is approved by the master's program by the end of the first graduate quarter. The preliminary program proposal from the coterminal application may inform the Program Proposal, but does not satisfy this master's degree requirement.

The course of study for each student's master's degree should be outlined on the student's Program Proposal form. The decision as to which courses a program approves in the student's master's program proposal, including changes from the typical curriculum, is within the purview of the department or program. The conversation between the student and the student's graduate adviser is important in this regard.

The master's program proposal must meet University minimum requirements for the master's degree, including at least 45 units taken at Stanford, all courses at 100-level or above, 50% of units designated primarily for graduate students (typically 200-level or above). All courses must be in the graduate career.

All requirements for a master's degree must be completed within three years after the first graduate quarter. An extension requires review of academic performance by the department or program, and is within the discretion of the program. See policies in the "Master's Degrees (p. 50)" section of this bulletin.

**Leaves of Absence**

Coterminal students who wish to take a leave of absence are subject to the Leave of Absence policies for undergraduate and graduate students, as described in the "Leaves of Absence and Reinstatement (Undergraduate) (p. 39)" and "Leaves of Absence (Graduate) (p. 58)" sections of this bulletin. Graduate students, including coterminal students, must obtain permission from the master's degree program. A coterminal student whose undergraduate degree has not been conferred must also obtain permission from the Office of Undergraduate Advising and Research, and may not take a leave of absence unless approved for both the graduate and undergraduate leave. Coterminal students are permitted to request a leave of absence for the first quarter of the graduate program. Leaves of absence are granted for a maximum of one calendar year, or four quarters. An extension of leave, for a maximum of one year or four quarters, is approved only in unusual circumstances. Leaves of absences may not exceed a cumulative total of two years (8 quarters including summer quarters), including both undergraduate and graduate programs.

**Degree Conferral**

Students must apply for conferral of each degree separately by filing an Application to Graduate in Axess by the deadline for the expected graduation term(s). The deadlines are available in the Academic Calendar (http://studentaffairs.stanford.edu/registrar/academic-calendar). A separate application must be filed for both the undergraduate and graduate degree program in each respective conferral term(s). Students who wish to confer their undergraduate and graduate degrees in the same quarter must apply for conferral of each degree separately by filing an Application to Graduate in Axess by the deadline for the expected graduation term. The master's degree must be conferred simultaneously with or after the bachelor's degree. Coterm students may not confer the master's degree prior to the conferral of the undergraduate degree.

Coterminal students whose first graduate quarter occurred prior to Autumn 2015 are subject to coterminal policies as indicated in the previous version of this bulletin. See the Stanford Bulletin 2014-15 (http://exploredegrees.stanford.edu/archive/2014-15/cotermdegrees).
Graduate Degrees

General Requirements
For each Stanford advanced degree, there is an approved course of study that meets University and department requirements. The University's general requirements, applicable to all graduate degrees at Stanford, are described below. University requirements pertaining to only a subset of advanced degrees are described in the "Degree-Specific Requirements, Master's Degrees" tab and "Degree-Specific Requirements, Doctoral Degrees" tab in this section of this bulletin.

See the "Graduate Programs" section of each department's listing for specific department degree requirements. Additional information on professional school programs is available in the bulletins of the Graduate School of Business, the School of Law, and the School of Medicine.

Enrollment Requirements
Graduate education at Stanford is a full-time commitment requiring full-time enrollment, typically at least 8 units during Autumn, Winter and Spring quarters. For a complete definition of full-time enrollment, see the "Certification of Enrollment or Degrees (p. 73)" section of this bulletin.

Requests to enroll for fewer than 8 units during the academic year are approved only in specific circumstances. Students enrolled in the Honors Cooperative or the Master of Liberal Arts programs are permitted part-time enrollment on a regular basis. Graduate students who need only a few remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency (see the "Graduate Petition for Part-time Enrollment (p. 60)" section of this bulletin). Students with disabilities covered under the Americans with Disabilities Act may enroll in a reduced course load as recommended by the Office of Accessible Education (https://oae.stanford.edu) (OAE). Matriculated and enrolled pregnant graduate students may request to enroll graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled.

2. In any term in which a University dissertation/thesis is submitted or at the end of which a graduate degree is conferred.
3. Normally, in any term in which the student receives financial support from the University.
4. In any term for which the student needs to use University facilities.
5. For international students, in any term of the academic year (summer may be excluded) for which they have non-immigrant status (i.e., a J-1 or F-1 visa).

Individual students may also find themselves subject to the registration requirements of other agencies (for example, external funding sources such as federal financial aid). Course work and research are expected to be done on campus unless the department gives prior approval.

Degree programs have the option to include the two weeks before the start of Autumn Quarter as part of Autumn Quarter for the purposes of completing milestones and departmental requirements. The following considerations apply to this exception:

1. The student must enroll in the subsequent Autumn Quarter in the applicable standard enrollment category prior to the completion of the milestone; a leave of absence is not permitted for that Autumn Quarter.
2. A student exercising this option will not be eligible for Graduation Quarter status until the following Winter Quarter at the earliest.
3. This exception is permitted only for milestones administered by the department, such as qualifying examinations or University oral examinations.
4. This exception does not apply to deadlines administered through Stanford University, such as filing the Application to Graduate, or Dissertation/Thesis submission.
5. Degree programs are not obligated to exercise this option solely because a student requests it.

Degree-Specific Requirements (Master's Degrees)
Master of Arts and Master of Science
In addition to completing the general requirements for advanced degrees and the specified program requirements, candidates for the degree of Master of Arts (M.A.) or Master of Science (M.S.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

Master's Program Proposal
Students pursuing an M.A., M.F.A., M.S., or M.P.P. degree are required to submit an acceptable program proposal to their department during the first quarter of enrollment using the Program Proposal for a Master's Degree (https://stanford.app.box.com/v/progpropma) form. Coterminal students must submit the proposal during the first quarter after admission to the coterminal program. The program proposal establishes a student's individual program of study to meet University and department degree requirements. Students must amend the proposal formally if their plans for meeting degree requirements change.

In reviewing the program proposal or any subsequent amendment to it, the department confirms that the course of study proposed by the student fulfills all department course requirements (for example, requirements specifying total number of units, course levels, particular courses, sequences, or substitutes). The department confirms that all other department requirements (for example, required projects, foreign language proficiency, or qualifying exams) are listed on the form and that all general University requirements (minimum units, residency, and so on) for the master’s degree will be met through the proposed program.
of study. Students who fail to submit an acceptable proposal may be dismissed.

**Time Limit for Completion of the Master's Degree**

All requirements for a master's degree must be completed within three years after the student's first term of enrollment in the master's program (five years for Honors Cooperative students). Students pursuing a coterminal master's degree must complete their requirements within three years of the first quarter of enrollment.

The time limit is not automatically extended by a student's leave of absence. All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program's time limit. Departments are not obliged to grant an extension. The maximum extension is one additional year. Extensions require review of academic progress and any other factors regarded as relevant by the department, and approval by the department; such approval is at the department's discretion.

**Master of Public Policy**

The degree of Master of Public Policy (M.P.P.) is a two-year program leading to a professional degree. Enrollment in the M.P.P. program is limited to candidates who have earlier been accepted to another Stanford graduate degree program and to recent (within three years) Stanford graduates. In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Public Policy (p. 704)" section of this bulletin, candidates for the degree of Master of Public Policy (M.P.P.) must outline an acceptable program of study on the Program Proposal for a Master's Degree (https://stanford.app.box.com/v/progpropma) and complete their degrees within the time limit for completion of the master's degree.

**Master of Business Administration**

The degree of Master of Business Administration (M.B.A.) is conferred on candidates who have satisfied the requirements established by the faculty of the Graduate School of Business and the general requirements for advanced degrees. Full particulars concerning the school requirements are found on the M.B.A. program web site of the Graduate School of Business (http://www.gsb.stanford.edu/programs/mba). The M.B.A. must be completed within the time limit for completion of the master's degree.

**Master of Fine Arts**

In addition to completing the general requirements for advanced degrees and the program requirements specified in the "Art and Art History (p. 388)" section of this bulletin, candidates for the degree of Master of Fine Arts (M.F.A.) must outline an acceptable program of study on the Master's Degree Program Proposal and complete their degrees within the time limit for completion of the master's degree.

**Master of Liberal Arts**

The Master of Liberal Arts (M.L.A.) program is a part-time interdisciplinary master's program in the liberal arts for returning adult students. In addition to completing the general requirements for advanced degrees, candidates for the degree of Master of Liberal Arts (M.L.A.) must complete their degrees within five years, an exception to the rule specified above.

**Engineer**

In addition to completing the general requirements for advanced degrees and the requirements specified by their department, candidates for the degree of Engineer must be admitted to candidacy and must complete a thesis per the specifications below.

**Candidacy**

The Application for Candidacy for Degree of Engineer is an agreement between the student and the department on a specific program of study to fulfill degree requirements. Students must apply for candidacy by the end of the second quarter of the program. Honors Cooperative students must apply by the end of the fourth quarter of the program. Candidacy is valid for five calendar years.

**Thesis**

A University thesis is required for the Engineer degree. Students have the option of submitting the thesis electronically or via the paper process. Standards for professional presentation of the thesis have been established by the Committee on Graduate Studies. Directions for preparation of the thesis for electronic or paper submission are available at the Office of the University Registrar dissertation/thesis (https://registrar.stanford.edu/students/dissertation-and-thesis-submission) web site.

The deadline for submission of theses for degree conferral in each term is specified by the University academic calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). If submitting via the paper process, three copies of the thesis, bearing the approval of the adviser under whose supervision it was prepared, must be submitted to the Office of the University Registrar before the quarterly deadline listed on the University academic calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). A fee is charged for binding copies of the paper thesis. If submitting via the electronic process the signed thesis signature page and title page must be submitted to the Student Services Center (https://studentservicescenter.stanford.edu) and one final copy of the thesis must be uploaded, and approved by the Final Reader, on or before the quarterly deadline indicated in the University's academic calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). There is no fee charged for the electronic submission process.

Students must be registered on graduation quarter in the term in which they submit the thesis; see "Graduation Quarter (p. 60)" section of this bulletin for additional information. At the time the thesis is submitted, an Application to Graduate must be on file, all department requirements must be complete, and candidacy must be valid through the term of degree conferral.

**Master of Legal Studies**

The Master of Legal Studies degree (M.L.S.), a nonprofessional degree, is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School. The Stanford Law School (http://www.law.stanford.edu/studentlife) Advanced Degree Programs (https://law.stanford.edu/education/degrees/advanced-degree-programs) provides detailed information on degree requirements.

**Master of Laws**

The degree of Master of Laws (L.L.M.) is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School. The degree is designed for foreign graduate students trained in law and is available only to students with a primary law degree earned outside the United States. The L.L.M. program offers students a choice of three areas of specialization: Corporate Governance and Practice; Law, Science, and Technology; or International Economic Law, Business; and Policy. The Stanford Law School (http://www.law.stanford.edu/studentlife) Advanced Degree Programs (https://law.stanford.edu/education/degrees/advanced-degree-programs) provides detailed information on degree requirements.
Master of the Science of Law
The degree of Master of the Science of Law (J.S.M.) is conferred upon candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than one academic year and who otherwise have satisfied the requirements of the University and the Stanford Law School.

The degree is primarily designed for those qualified students who hold a J.D. or its equivalent and who are at the Stanford Law School for independent reasons (for example, as teaching fellows) and who wish to combine work toward the degree with their primary academic activities. Specially qualified lawyers, public officials, academics, and other professionals who have worked outside the United States may apply for the degree through the Stanford Program in International Legal Studies (SPILS). The Stanford Law School (http://www.law.stanford.edu/studentlife/Advanced Degree Programs (https://law.stanford.edu/education/conferences/advanced-degree-programs) provides detailed information on degree requirements.

Degree-Specific Requirements (Doctoral Degrees)
Doctor of Jurisprudence
The degree of Doctor of Jurisprudence (J.D.) is conferred on candidates who satisfactorily complete courses in law totaling the number of units required under the current Faculty Regulations of the Stanford Law School over not less than three academic years and who otherwise have satisfied the requirements of the University and the Stanford Law School. The Stanford Law School J.D. Program (https://law.stanford.edu/education/degrees/jd-program) web site provides detailed information on degree requirements.

Doctor of the Science of Law
The degree of the Doctor of the Science of Law (J.S.D.) is conferred upon candidates who hold a J.D. or its equivalent, who complete one academic year in residence, and who, as a result of independent legal research, present a dissertation that is, in the opinion of the faculty of the Stanford Law School a contribution to knowledge. Such work and dissertation must conform to the rules of the Stanford Law School and for the dissertation and the University Oral Examination, as described below in the "Doctor of Philosophy" section of this bulletin.

Candidacy is limited to students of exceptional distinction and promise. The Stanford Law School Advanced Degree Programs (https://law.stanford.edu/education/conferences/advanced-degree-programs) web site provides detailed information on degree requirements.

Doctor of Musical Arts
The degree of Doctor of Musical Arts (D.M.A.) is conferred on candidates who have satisfied the general requirements for advanced degrees, the program requirements specified in the "Music (p. 669)" section of this bulletin, and the candidacy requirement as described below in the "Doctor of Philosophy" section.

Doctor of Medicine
Candidates for the degree of Doctor of Medicine (M.D.) must satisfactorily complete the required curriculum in medicine. The requirements for the M.D. degree are detailed on the School of Medicine's web site (http://med.stanford.edu/md).

Doctor of Philosophy
The degree of Doctor of Philosophy (Ph.D.) is conferred on candidates who have demonstrated to the satisfaction of their department or school substantial scholarship, high attainment in a particular field of knowledge, and the ability to do independent investigation and present the results of such research. They must satisfy the general requirements for advanced degrees, the program requirements specified by their departments, and the doctoral requirements described below. The option for a Ph.D. minor is also described below, though it is not a Ph.D. requirement.

Candidacy
Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty in the department or school of the student’s potential to successfully complete the requirements of the degree program. Students are expected to complete department qualifying procedures and apply for candidacy by the end of their second year in the Ph.D. program. Honors Cooperative students must apply by the end of their fourth year. A Pregnancy or Parental Leave of Absence automatically extends the pre-candidacy period by one year for a birth mother and three months (one quarter) for a non-birth parent (see GAP 5.9 Pregnancy, Childbirth and Adoption (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-9/page-5-9-1)).

Admission to candidacy for the doctoral degree is granted by the major department following a student’s successful completion of qualifying procedures as determined by the department. Departmental policy determines procedures for subsequent attempts to become advanced to candidacy in the event that the student does not successfully complete the procedures. Failure to advance to candidacy results in the dismissal of the student from the doctoral program; see "Guidelines for Dismissal of Graduate Students for Academic Reasons (p. 55)" section of this bulletin.

The Application for Candidacy for a Doctoral Degree (https://stanford.app.box.com/v/appcanddoct) form specifies a departmentally approved program of study to fulfill degree requirements, including required course work, language requirements, teaching requirements, dissertation (final project and public lecture-demonstration for D.M.A.), and University oral examination (for Ph.D.). Prior to candidacy, at least 3 units of work must be taken with each of four Stanford faculty members. To reiterate, however, a student will only be admitted to candidacy if, in addition to the student’s fulfilling departmental prerequisites, the faculty makes the judgment that the student has the potential to successfully complete the requirements of the degree program.

If the Ph.D. student is pursuing a minor, approval by the department awarding the minor is also required on the Application for Candidacy.

Time Limit for Completion of a Degree with Candidacy
Students are required to maintain active candidacy through conferral of the doctoral degree. All requirements for the degree must be completed before candidacy expires. Candidacy is valid for five years unless terminated by the department (for example, for unsatisfactory progress). The time limit is not automatically extended by a student’s leave of absence. A Pregnancy or Parental Leave of Absence automatically extends the candidacy period by one year for a birth mother and three months (one quarter) for a non-birth parent (see GAP 5.9 Pregnancy, Childbirth, and Adoption (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-9/page-5-9-1)).

Failure to make minimum progress or complete University, department, and program requirements in a timely or satisfactory manner may lead to dismissal; see the guidelines for "Dismissal of Graduate Students for Academic Reasons (p. 55)" section of this bulletin and GAP 5.6 Dismissal for Academic and Professional Reasons (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-6/page-5-6-1).

All requests for extension, whether prompted by a leave or some other circumstance, must be filed by the student before the conclusion of the program’s time limit. Departments are not obligated to grant an
extension. Students may receive a maximum of one additional year of candidacy per extension. Extensions require review by the department of a dissertation progress report, a timetable for completion of the dissertation, any other factors regarded as relevant by the department, and approval by the department; such approval is at the department’s discretion.

Teaching and Research Requirements
A number of departments require their students to teach (serving as a teaching assistant) or assist a faculty member in research (serving as a research assistant) for one or more quarters as part of their doctoral programs. Detailed information is included in the department sections of this bulletin.

Foreign Language Requirement
Some departments require a reading knowledge of one or more foreign languages as indicated in department sections of this bulletin. Fulfillment of language requirements must be endorsed by the chair of the major department.

University Oral Examination
Passing a University oral examination is a requirement of the Ph.D. and J.S.D. degrees. The purpose of the examination is to test the candidate’s command of the field of study and to confirm fitness for scholarly pursuits. Departments determine when, after admission to candidacy, the oral examination is taken and whether the exam is a test of knowledge of the field, a review of a dissertation proposal, or a defense of the dissertation dissertation; see GAP 4.7 Doctoral Degrees: University Oral Examinations and Committees (https://gap.stanford.edu/handbooks/gap-handbook/chapter-4/subchapter-7/page-4-7-1) for additional explanation.

Timing and Process
Students must be registered in the term in which the University oral examination is taken. The period between the last day of final exams of one term and the day prior to the first day of the following term is considered an extension of the earlier term. Candidacy must also be valid.

The University Oral Examination (https://stanford.app.box.com/v/doc-orals) form must be submitted to the department graduate studies administrator at least two weeks prior to the proposed examination date. The examination is conducted according to the major department’s adopted practice, but it should not exceed three hours in length, and it must include a period of private questioning by the examining committee.

Committee Membership
The University oral examination committee consists of at least five Stanford faculty members: four examiners and the committee chair from another department. All committee members are normally members of the Stanford University Academic Council, and the chair must be a member of the Stanford University Academic Council. Emeritus faculty are also eligible to serve as examiners or as chair of the committee.

Out-of-Department Chair
The chair of a Stanford oral examination is appointed for this examination only, to represent the interests of the University for a fair and rigorous process. The chair of the examining committee may not have a full or joint appointment in the adviser’s or student’s department, but may have a courtesy appointment in the department. The chair can be from the same department as any other member(s) of the examination committee and can be from the student’s minor department provided that the student’s adviser does not have a full or joint appointment in the minor department.

For Interdisciplinary Degree Programs (IDPs), the chair of the examining committee may not have a full or joint appointment in the primary adviser’s major department and must have independence from the student and adviser.

Responsibility for monitoring appointment of the oral examination chair rests with the candidate’s major department. Although the department cannot require the candidate to approach faculty members to serve as chair, many departments invite students and their advisers to participate in the process of selecting and contacting potential chairs.

Exceptions
A Petition for Non-Academic Council Doctoral Commitment Members (https://stanford.app.box.com/v/doc-ctte-non-acad-council) to appoint an examining committee member who is neither a current or emeritus member of the Academic Council may be approved by the chair of the department if that person contributes an area of expertise that is not readily available from the faculty and holds a Ph.D. or equivalent foreign degree. Exceptions for individuals whose terminal degree is not the Ph.D. or equivalent foreign degree may be granted by the Vice Provost for Graduate Education, upon the request of the student’s department chair. The majority of the examiners must be current or emeritus Academic Council members; more specifically, one of four or five examiners or two of six or seven examiners may be appointed to the oral examination committee by means of this petition.

Reporting
The candidate passes the examination if the examining committee casts four favorable votes out of five or six, five favorable votes out of seven, or six favorable votes out of eight. Five members present and voting constitute a quorum. If the committee votes to fail a student, the committee chair sends within five days a written evaluation of the candidate’s performance to the major department and the student. Within 30 days and after review of the examining committee’s evaluation and recommendation, the chair of the student’s major department must send the student a written statement indicating the final action of the department.

Dissertation
An approved doctoral dissertation is required for the Ph.D. and J.S.D. degrees. The doctoral dissertation must be an original contribution to scholarship or scientific knowledge and must exemplify the highest standards of the discipline. If it is judged to meet this standard, the dissertation is approved for the school or department by the doctoral dissertation reading committee (see GAP 4.8 Doctoral Degrees: Dissertations and Dissertation Reading Committees (https://gap.stanford.edu/handbooks/gap-handbook/chapter-4/subchapter-8/page-4-8-1) for more explanation).

Approval
Each member of the reading committee signs the signature page of the dissertation to certify that the work is of acceptable scope and quality. These signatures must be in ink; proxy or electronic signatures are not permitted. One reading committee member, who must be a member of the Academic Council, reads the dissertation in its final form and certifies on the Certificate of Final Reading that department and University specifications have been met.

Dissertations must be in English. Approval for writing the dissertation in another language is normally granted only in cases where the other language or literature in that language is also the subject of the discipline. Such approval is routinely granted for dissertations in the Division of Literatures, Cultures, and Languages, in accordance with the policy of the individual department. Approval is granted by the school dean upon a written request from the chair of the student’s major
Submission
Students have the option of submitting the dissertation electronically or via the paper process. Directions for preparation of the dissertation for electronic or paper submission are available at the Office of the University Registrar’s web site (https://registrar.stanford.edu/students/dissertation-and-thesis-submission) web site. If submitting via the paper process, the signed dissertation copies and accompanying documents must be submitted to the Office of the University Registrar on or before the quarterly deadline indicated in the University’s academic calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). A fee is charged for the microfilming and binding of the paper dissertation copies. If submitting via the electronic process the signed dissertation signature page and title page must be submitted to the Student Services Center (https://studentservicescenter.stanford.edu) and one final copy of the dissertation must be uploaded, and approved by the Final Reader, on or before the quarterly deadline indicated in the University’s academic calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). There is no fee charged for the electronic submission process.

Enrollment
Students must either be registered or on graduation quarter in the term they submit the dissertation; see "Graduation Quarter" in the "Graduate Degrees (http://exploredegrees.stanford.edu/graduatedegrees/ #specialregistrationstatustext)" section of this Bulletin for additional information. At the time the dissertation is submitted, an Application to Graduate must be on file, all department requirements must be complete, and candidacy must be valid through the term of degree conferral.

Doctoral Dissertation Reading Committee
The doctoral dissertation reading committee consists of the principal dissertation adviser and, typically, two other readers. The doctoral dissertation reading committee must have three members and may not have more than five members. All members of the reading committee approve the dissertation. At least one member must be from the student’s major department. Normally, all committee members are members of the Stanford University Academic Council or are emeritus Academic Council members. The student's department chair may, in some cases, approve the appointment of a reader who is not a current or emeritus member of the Academic Council, if that person is particularly well qualified to consult on the dissertation topic and holds a Ph.D. or equivalent foreign degree. Exceptions for individuals whose terminal degree is not the Ph.D. or equivalent foreign degree may be granted by the Vice Provost for Graduate Education, upon the request of the student's department chair via the Petition for Non-Academic Council Doctoral Committee Members (https://stanford.app.box.com/v/doc-ctte-non-acad-council). Former Stanford Academic Council members and non-Academic Council members may thus, on occasion, serve on a reading committee. A non-Academic Council member (including former Academic Council members) may replace only one of three required members of dissertation reading committees. If the reading committee has four or five members, at least three members (comprising the majority) must be current or emeritus members of the Academic Council.

Any member of the Academic Council may serve as the principal dissertation adviser. If former Academic Council members, emeritus Academic Council members, or non-Academic Council members are to serve as the principal dissertation adviser, the appointment of a co-adviser who is currently on the Academic Council is required. This is to ensure representation for the student in the department by someone playing a major adviser role in completion of the dissertation. However, a co-adviser is not required during the first two years following retirement for emeritus Academic Council members who are recalled to active service.

The reading committee, as proposed by the student and agreed to by the prospective members, is endorsed by the chair of the major department on the Doctoral Dissertation Reading Committee (https://stanford.app.box.com/v/docdiss-reading-committee-form) form. This form must be submitted before approval of Terminal Graduate Registration (TGR) status or before scheduling a University oral examination that is a defense of the dissertation. The reading committee may be appointed earlier, according to the department timetable for doctoral programs. All subsequent changes to the reading committee must be approved by the chair of the major department. The reading committee must conform to University regulations at the time of degree conferral.

Ph.D. Minor
Students pursuing a Ph.D. may pursue a minor in another department or program to complement their Ph.D. program. This option is not available to students pursuing other graduate degrees. Ph.D. candidates cannot pursue a minor in their own major department or program. In rare cases, a Ph.D. student may complete the requirements for more than one minor. In that case, 20 unduplicated units must be completed for each minor.

Only departments that offer a Ph.D. may offer a minor, and those departments are not required to do so. Interdisciplinary Ph.D. minors, administered by a designated academic department, may be approved by the Faculty Senate. The minor should represent a program of graduate quality and depth, including core requirements and electives or examinations. The department offering the minor establishes the core and examination requirements. Elective courses are planned by the students in conjunction with their minor and Ph.D. departments.

The minimum University requirement for a Ph.D. minor is 20 units of course work at the graduate level (typically courses numbered 200 and above). If a minor department chooses to require those pursuing the minor to pass the Ph.D. qualifying or field examinations, the 20-unit minimum can be reduced. All of the course work for a minor must be done at Stanford.

Units taken for the minor can be counted as part of the overall requirement for the Ph.D. of 135 units of graduate course work done at Stanford. Courses used for a minor may not be used also to meet the requirements for a master's degree.

An Application for Ph.D. Minor (https://stanford.box.com/app-phd-minor) outlining a program of study must be approved by the major and minor departments and submitted to the Student Services Center. This form is submitted at the time of admission to candidacy and specifies whether representation from the minor department on the University oral examination committee is required.

Joint Degree Programs
A joint degree program (JDP) is a specified combination of degree programs or degree types in which a student is enrolled in two graduate degree programs concurrently. JDPs are developed and proposed by the relevant academic units with agreement of the deans of the schools affected.

An approved JDP includes a set of agreements between the participating programs and schools about matters such as admissions, advising, curricula, and tuition. In a JDP, a specified number of units may be double-counted toward the minimum University residency requirements for both degrees, reducing the total number of residency units required to complete both degrees. Students pursuing a joint degree that includes a Ph.D. may not also count a Stanford master’s degree or transfer units towards residency for the Ph.D. degree. Application deadlines for each program or degree apply. Students must be admitted to the JDP no later
than the study list deadline of the term prior to the term of expected degree conferral. In a JDP, both degrees are conferred concurrently since the units required for each degree are linked to the completion of both degrees. The sole exception is the J.D. degree which may be awarded prior to the second degree.

The following joint degree programs, permitting students to complete requirements for two degrees with a reduced number of total residency units, are offered:

- Juris Doctor with a Master of Arts in Economics, Education, History, Public Policy, or the Division of International Comparative and Area Studies: African Studies, East Asian Studies, International Policy Studies, Latin American Studies, and Russian, East European and Eurasian Studies (J.D./M.A.)
- Juris Doctor with a Master of Science in Bioengineering, Computer Science, Electrical Engineering, Environment and Resources, Health Research and Policy, or Management Science and Engineering (J.D./M.S.)
- Juris Doctor with a Master of Public Policy (J.D./M.P.P.)
- Juris Doctor with a Doctor of Philosophy in Bioengineering, Communication, Economics, Environment and Resources, History, Management Science and Engineering, Neuroscience, Philosophy, Political Science, Psychology, or Sociology and with the Graduate School of Business Ph.D. program (J.D./Ph.D.)
- Juris Doctor with a Master of Business Administration (J.D./M.B.A.)
- Master of Business Administration with a Master of Arts in Education (M.B.A./M.A.)
- Master of Business Administration with a Master of Science in Computer Science, Electrical Engineering, and Environment and Resources (M.B.A./M.S.)
- Master of Business Administration with a Master of Public Policy (M.B.A./M.P.P.)
- Master of Arts in Education or International Policy Studies with a Master of Public Policy (M.A./M.P.P.)
- Master of Science in Management Science and Engineering with a Master of Public Policy (M.S./M.P.P.)
- Doctor of Philosophy in Economics, Education, Psychology, Sociology, or Structural Biology with a Master of Public Policy (Ph.D./M.P.P.)
- Juris Doctor with a Doctor of Medicine (J.D./M.D.)
- Master of Public Policy with a Doctor of Medicine (M.P.P./M.D.)

Specific requirements for the joint degree programs are available from the participating departments and schools and at Registrar’s (https://registrar.stanford.edu/students/graduate-degree-progress/joint-degree-program-information) web site.

Creation of additional joint degree programs that are combinations of J.D./M.A., J.D./M.S., and Ph.D./M.P.P. degrees have been authorized by the Faculty Senate. New JDPs from among these combinations may double-count up to 45 units towards residency requirements. JDPs from these combinations are proposed by the coordinating programs and schools. Once approvals from the chairs of the programs and deans of the relevant schools are obtained, approval on behalf of the Committee on Graduate Studies is granted by the Office of the Vice Provost for Graduate Education, and final approval is granted by the Office of the University Registrar.

JDPs combining the J.D. and Ph.D. degrees that allow up to the 54-unit reduction of the residency requirement for both degrees separately, following the model of previously approved joint J.D./Ph.D.s listed above, can be approved by the Office of the Vice Provost for Graduate Education and final approval is granted by the Office of the University Registrar.

JDPs combining other degree types or programs may be proposed, but require review by the Faculty Senate Committee on Graduate Studies and must be approved by the Faculty Senate.

**Minimum Progress Requirements for Graduate Students**

The academic requirements for graduate students include completion of University, department, and program requirements, such as admission to candidacy, successful completion of qualifying exams, and so on in a timely and satisfactory manner. Graduate students must also meet the following standards of minimum progress as indicated by units and grades. (These standards apply to all advanced degree programs except the Graduate School of Business Ph.D., and the M.B.A., J.D., L.L.M., J.S.M., J.S.D., M.D., and M.L.A., which follow guidelines issued by the respective schools and are described in their respective school bulletins.)

Graduate students enrolled for 11 or more units must pass at least 8 units per term by the end of each term. Those registered for fewer than 11 units must pass at least 6 units per term by the end of each term, unless other requirements are specified in a particular case or for a particular program.

In addition, graduate students must maintain a 3.0 (B) grade point average overall in courses applicable to the degree.

Department requirements for minimum progress that set a higher standard for units to be completed, or a higher or lower standard for grade point average to be maintained, take precedence over the University policy; any such different standards must be published in the Stanford Bulletin.

Graduate students who have been granted Terminal Graduate Registration (TGR) status must enroll each term in the TGR course (801 for master’s and Engineer programs or 802 for doctoral programs) in their department in the section appropriate for the adviser. An 'N' grade signifying satisfactory progress must be received each quarter to maintain registration privileges. An 'N-' grade indicates unsatisfactory progress. The first 'N-' grade constitutes a warning. A second consecutive 'N-' grade normally causes the department to deny the student further registration until a written plan for completion of degree requirements has been approved by the department. Subsequent 'N-' grades are grounds for dismissal from the program.

Students receiving federal student aid funds, including student loans, must maintain satisfactory academic progress standards that may be stricter than departmental standards. See the Financial Aid Office (http://financialaid.stanford.edu) web site for details.

**Graduate Unit Requirements**

The University’s expectation is that the units counted towards all graduate degrees are primarily in graduate courses. The University has set specific requirements for units applied to the minimum requirement for the M.A., M.S., and M.F.A. degrees: All units must be in courses at or above the 100 level and at least 50 percent of those must be courses designated primarily for graduate students (typically at least the 200 level). Units earned in courses below the 100 level may not be counted towards the minimum unit requirement for the master's degree.
Department specifications for the level of course work accepted for a particular master's degree program may be higher than the University's specifications.

**Changes of Degree Programs**

Graduate students are admitted to Stanford for a specific degree program. Students who have attended Stanford for at least one term and who are currently enrolled may submit a Graduate Program Authorization Petition in Axess to make one of the following changes:

1. change to a new degree program in the same department;
2. change to a new degree program in a different department;
3. add a new degree program in the same or a different department to be pursued with the existing program. Coterminous students must have the bachelor's degree conferred before adding a second advanced degree program. Summer term enrollment is optional for students beginning a new degree program in the Autumn term provided that they have been enrolled the prior Spring term.

It is important that the attempt to add or change degree programs be made while enrolled. Otherwise, a new Application for Graduate Admission must be submitted and an application fee paid. The Graduate Program Authorization Petition is submitted electronically through Axess to the department in which admission is requested. If applying for a higher degree program, students may also be required to submit other application materials such as GRE Subject Test scores, a statement of purpose, or new letters of recommendation. Decisions on the petitions are made by the programs or departments to which they are directed, and are at the discretion of those programs or departments.

International students changing departments or degree programs must also obtain the approval of the Foreign Student Adviser at the Bechtel International Center (https://bechtel.stanford.edu). If the requested change lengthens their stay, they also are required to submit verification of sufficient funding to complete the new degree program.

Students who wish to terminate study in a graduate program should submit a properly endorsed Request to Permanently Withdraw from Degree Program form (https://stanford.app.box.com/v/permanent-withdraw) to the Student Services Center (https://studentservicescenter.stanford.edu). To return to graduate study thereafter, the student is required to apply for reinstatement (if returning to the same degree program) or admission (if applying to a different program). Both applications require payment of a fee.

**Guidelines for Dismissal of Graduate Students for Academic or Professional Reasons**

Admission to graduate programs at Stanford is highly selective. It is anticipated that every admitted student will be able to fulfill the requirements for the advanced degree. This document provides guidelines to be used in the unusual circumstance that a department must consider dismissal of a graduate student for academic reasons. These guidelines apply to all advanced degree programs except those in the schools of Law and Business, the STEP program in the Graduate School of Education, and the M.D. program in the School of Medicine, which follow guidelines issued by the respective schools.

The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the University, department, and program requirements for the degree, fulfillment of minimum progress requirements, and meeting standards of professional behavior. The guidelines that follow specify procedures for dismissal of graduate students who are not meeting these conditions. In such cases, a departmental committee (hereafter “the committee”), whether the department’s committee of the faculty or other committee authorized to act on the department’s behalf such as the departmental graduate studies committee, will:

1. Where possible and as early as possible, warn the student, in writing, of the situation and deficiency. A detailed explanation of the reason for the warning should be provided.
2. Consider extenuating circumstances communicated by the student.
3. Decide the question of dismissal by majority vote of the committee (with at least three faculty members participating in the committee’s deliberation), and communicate the decision to the student in writing.
4. Place a summary of department discussions, votes, and decisions in the student’s file.
5. Provide students the opportunity to examine their department files, if requested.
6. Provide students with information on their rights to appeal under the Student Academic Grievance Procedure. See the “Student Academic Grievance Procedure (p. 75)” section of this bulletin.

Careful records of department decisions safeguard the rights of both students and faculty.

**Guidelines for Addressing Graduate Student Professional Conduct**

The success of any academic institution depends on a shared willingness to discharge the ethical obligations that bind students, staff and faculty together in a system of mutually supporting professional roles. Stanford University is no exception. (Administrative Guide, 1.1.1 Code of Conduct (https://adminguide.stanford.edu/chapter-1/subchapter-1)). The relevant ethical obligations are clearly defined for faculty in the Faculty Handbook: “In order to maintain the integrity of its teaching and research and to preserve academic freedom, Stanford University demands high standards of professional conduct from its faculty.” (Faculty Handbook 4.3.A (http://facultyhandbook.stanford.edu/ch4)). The purpose of this policy is to similarly define the professionalism expectations for graduate students as they prepare to be responsible members of professional communities.

Graduate students are expected to meet standards of professional behavior, including: being present on campus to meet the academic and research expectations of the school or department; communicating in a timely, respectful and professional manner; complying with institutional policies and procedures; and participating appropriately in the program’s community. Graduate students are expected to familiarize themselves with applicable University policy and degree program requirements. Failure to meet these standards may be grounds for dismissal.

Information about degree program requirements is available from departments; students are encouraged to consult with faculty and staff in those programs should they have questions about local requirements.

When the University has professionalism concerns about a graduate student, the University manages the concern utilizing the Guidelines for Dismissal of Graduate Students for Academic or Professional Reasons (above).

**Additional Specifics for Degrees with Candidacy**

**Before the Review for Candidacy**

The committee, before review for admission to candidacy, may vote to dismiss a student who is not making minimum progress or completing requirements in a timely and satisfactory way or meeting standards of professional behavior. Before considering dismissal, the committee should communicate with the student (which may include a meeting with the student) concerning his or her academic or professional performance and how to correct deficiencies, where such deficiencies are deemed correctable.
At the Review for Candidacy
In a review for admission to candidacy, if the committee votes not to recommend the student for admission to candidacy, the vote results in the dismissal of the student from the program. The department chair, or Director of Graduate Studies, or the student’s adviser shall communicate the department’s decision to the student in writing and orally. The student may submit a written request for reconsideration. The committee shall respond in writing to the request for reconsideration; it may decline to reconsider its decision.

During Candidacy
When a student admitted to candidacy is not making minimum progress, or not meeting standards of professional performance, or not completing University, department, or program requirements in a timely and satisfactory manner, the student’s adviser, the Director of Graduate Studies, or department chair, and other relevant faculty should meet with the student. A written summary of these discussions shall be sent to the student and the adviser and added to the student’s department file. The summary should specify the student’s academic or professional deficiencies, the steps necessary to correct them (if deemed correctable), and the period of time that is allowed for their correction (normally one academic quarter). At the end of the warning period, the committee should review the student’s progress and notify the student of its proposed actions. If the student has corrected the deficiencies, he or she should be notified in writing that the warning has been lifted.

If the deficiencies are not deemed correctable by the committee (for example, the failure of a required course or examination, or a pattern of unsatisfactory behavior or performance) or if, at the end of the warning period, the student has not in the view of the committee corrected the deficiencies, the committee may initiate proceedings for dismissal. The student shall be notified, in writing, that the case of dismissal will be considered at an impending committee meeting. The student has the right to be invited to attend a portion of the scheduled meeting to present his or her own case; a student may also make this case to the committee in writing.

After full discussion at the committee meeting, the committee, without the student present, shall review the case and vote on the issue of dismissal. The student shall be sent a written summary of the discussion, including the committee’s decision and the reasons for it. The student may submit a written request for reconsideration. The committee’s response to the request for reconsideration shall be made in writing; it may decline to reconsider its decision.

Pregnancy, Childbirth, and Adoption Accommodation Policy
Stanford prohibits discrimination on the basis of any characteristic protected by law including discrimination on the basis of pregnancy. Stanford complies with requirements of California Education Code section 66281.7. Stanford’s policy provides that pregnant graduate students be supported either by staying enrolled or taking a pregnancy leave of absence (GAP 5.9 Pregnancy, Childbirth, and Adoption (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-9/page-5-9-1)). The policy also provides childbirth accommodations for graduate students giving birth as well as support for non-birth parents who have recently experienced the birth of a child. Questions about the policy can be directed to the Office of the Vice Provost for Graduate Education (VPGE) (http://vpge.stanford.edu).

Residency Policy for Graduate Students
Each type of graduate degree offered at Stanford (for example, Master of Science, Doctor of Philosophy) has a residency requirement based on the number of academic units required for the degree. These residency requirements and the maximum allowable transfer units for each degree type are listed below. Unless permission is granted by the department (for example, for field work) enrolled graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled.

The unit requirements for degrees can represent solely course work required for the degree or a combination of course work, research, and a thesis or dissertation. Academic departments and schools offering degrees may establish unit requirements that are higher than the minimum University residency requirement, but they may not have a residency requirement that is lower than the University standard. In addition to the University’s residency requirement based on a minimum number of units for each degree, the School of Medicine and the Graduate School of Business may establish residency requirements based on the number of quarters of full-time registration in which students are enrolled to earn a degree. However, in no case may a student earn fewer units than the University minimum for each degree. All residency requirements are published in the Stanford Bulletin. Students should consult the Stanford Bulletin or their academic department to determine if their degree program has residency requirements that exceed the minimum.

Students eligible for Veterans Affairs educational benefits should refer to the “Veterans’ Educational Benefits (p. 64)” section of this bulletin.

It is Stanford University’s general policy that units are applicable toward only one degree. Units may not normally be duplicated or double-counted toward the residency requirement for more than one degree, with the exception that up to 45 units of a Stanford M.A. or M.S. degree may be applied to the residency requirement for the Ph.D., D.M.A., or Engineer degrees. Other exceptions to this general policy for specified combinations of degree types, known as Joint Degree Programs, may be approved by agreement of the Faculty Senate and the deans of the schools affected, with review by the Committee on Graduate Studies. Students pursuing a Joint Degree that includes a Ph.D. may not also count a Stanford master’s degree or transfer units towards residency for the Ph.D. degree. See the “Joint Degree Programs (http://exploredegrees.stanford.edu/graduatedegrees/#jointdegreestext)” tab of this section of this bulletin for additional information.

Only completed course units are counted toward the residency requirement. Courses with missing, incomplete, in progress, or failing grades do not count toward the residency requirement. Courses from which a student has formally withdrawn do not count toward the residency requirement.

Terminal Graduate Registration (TGR) is available to graduate students who have met all of the conditions listed in the “TGR (p. 60)” section of this bulletin.

1 The University has authorized the granting of the M.A.T., Ed.S. and Ed.D. degrees, but they are not being offered.
Up to 45 units completed at Stanford toward a M.A. or M.S. degree or accepted as transfer credit, but not both, in an Engineering discipline may be used to toward the 90 unit residency requirement for the Engineer degree. At least 45 units of work at Stanford are necessary to complete the 90 residency units for the Engineer degree.

Enrollment in the M.P.P. degree program is limited to candidates who have earlier been accepted to another Stanford graduate degree program and to recent (within three years) Stanford graduates.

Students eligible for Veterans Affairs educational benefits should refer to the Veterans Benefits section of "Admissions and Financial Aid (p. 15)" in this bulletin.

Up to 45 units completed at Stanford toward a M.A. or M.S. degree or accepted as transfer credit, but not both, may be used toward the 135 unit residency requirement for the Ph.D. or D.M.A. degree. At least 90 units of work at Stanford are necessary to complete the 135 residency units for the Ph.D. or D.M.A. degree.

Up to 35 units completed at Stanford toward a J.S.M degree may be used toward the 44-unit residency requirement for the J.S.D degree.

University Minimum Residency Requirements for Graduate Degree Combinations

Students with multiple degree programs must complete the residency requirements for all their degree types. Students enrolled in a joint degree program should see the "Joint Degree Program (p. 54)" section of this Bulletin.

A table of these residency requirements is also available on the Registrar's web site (https://registrar.stanford.edu/students/graduate-degree-progress/minimum-residency-requirements-graduate-degrees).

Graduate Residency Transfer Credit

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at another institution. Engineer candidates who also earned their master's at Stanford are not eligible for transfer residency credit, nor are any master's degree students. Ph.D. or D.M.A. students may only apply a total of 45 units of transfer credit and credit earned for a Stanford master's degree toward the PhD residency total.

Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure.

The following criteria are used by the department in determining whether, in its discretion, it awards transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student's department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.

2. The student must have been enrolled at the other institution in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-degree) courses is 12 units. No transfer credit is given for online or correspondence work.

3. Courses must have been taken after the conferral of the bachelor's degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor's/master's program.

4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which letter grades were not an option and for which the standard of passing is 'B' quality work.

5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Graduate Residency Credit is reviewed by the department and the Office of the University Registrar. For transfer credit done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence. One semester unit or hour usually equals 1.5 quarter units.

Leaves of Absence (Graduate)

Students on leave of absence are not registered at Stanford and, therefore, do not have the rights and privileges of registered students. They cannot fulfill any official department or University requirements during the leave period.

Leaves do not delay candidacy or master's program expiration dates.

Students on leave may complete course work for which an 'Incomplete' grade was awarded in a prior term and are expected to comply with the maximum one-year time limit for resolving incompletes; a leave of absence does not stop the clock on the time limit for resolving incompletes. Students with extenuating circumstances that may warrant an exception to academic policy should discuss the need for an extension to the time limit with their adviser and the course instructor. Students may request an extension of the deadline for resolving an incomplete by submitting the Petition to Change Course Enrollment (Graduate Students) (https://stanford.box.com/change-crse-enroll).

When a student is granted (or placed on) a leave of absence after the beginning of the term, courses in which the student was enrolled after the drop deadline appear on the student's transcript and show the symbol 'W' (Withdraw).

Voluntary Leaves of Absence

Graduate students who do not meet the requirement for continuous registration during the academic year must obtain an approved leave of absence, in advance, for the term(s) they will not be registered. The leave of absence must be reviewed for approval by the chair or director of graduate studies of the student's major department and, if the student is in the United States on a foreign student visa, by the Bechtel International Center (http://icenter.stanford.edu). Except in the case of pregnancy or parental leaves, the granting of a leave of absence is at the discretion of the department and subject to review by the Office of the University Registrar. The University may condition its approval of a petition for leave of absence on the student's meeting such requirements as the University deems appropriate in the individual case for the student to be eligible to return (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a health care professional at Vaden Health Center (http://vaden.stanford.edu) or Counseling and Psychological Services (https://vaden.stanford.edu/caps-and-wellness) or its designee).
New graduate students may not take a leave of absence during their first quarter. However, new Stanford students may request a deferment from the department.

Coterminal students who wish to take a leave of absence are subject to the Leave of Absence policies for both undergraduate and graduate students, as described here and in the undergraduate Leaves of Absence and Reinstatement (p. 39) section of this Bulletin. A coterminal student whose undergraduate degree has not been conferred must obtain permission from the master’s degree program and the office of Undergraduate Advising and Research, and may not take a leave of absence unless approved for both the graduate and undergraduate leave. Coterminal students are permitted to request a leave of absence for the first quarter of the graduate program.

Leaves of absence are granted for a maximum of one calendar year, or four quarters. Leaves requested for a longer period are approved only in exceptional circumstances (for example, mandatory military service). An extension of leave, for a maximum of one year or four quarters, is approved only in unusual circumstances. Extension requests must be made before the expiration of the original leave of absence. Leaves of absence for graduate students may not exceed a cumulative total of two years (eight quarters including summer quarters).

Any pregnant graduate student may request a Pregnancy Leave of Absence in order to suspend her student enrollment around the time of the birth. Alternatively, she may choose to remain enrolled and to request a Childbirth Accommodation. Non-birth parents may request a Parental Leave of Absence. Non-birth parents include: spouses/partners of women (who do not have to be Stanford students) anticipating or recently experiencing the birth of a child, parents who adopt a child, and parents by means of surrogacy.

In the case of Pregnancy and Parental Leaves of Absence, all provisions of the policy for Voluntary Leaves of Absence, defined above, will apply, except:

- Any matriculated pregnant student requesting a Pregnancy Leave of Absence will automatically be approved for a leave period of four quarters (12 months).
- Non-birth parents who request a Parental Leave of Absence will automatically be approved for a leave period of one academic quarter.
- Any student on a Pregnancy Leave of Absence in a degree program requiring candidacy, who has not yet been admitted to candidacy, will have the period of time in which to achieve candidacy automatically extended by 12 months (four quarters). If she has been admitted to candidacy, the candidacy period will be automatically extended by 12 months (four quarters). The 12-month extension of pre-candidacy or candidacy will be applicable whether the student takes a full year of leave or returns in less than one year.
- Any student on a Parental Leave of Absence in a degree program requiring candidacy, who has not yet been admitted to candidacy, will have the period of time in which to achieve candidacy automatically extended by three months (one quarter). If he or she has been admitted to candidacy, the candidacy period will be automatically extended by three months (one quarter).
- In the case where a Pregnancy or Parental Leave of Absence would extend the student’s cumulative total beyond 8 quarters, that extension will be permitted so that the student may return to his or her program. The student will then be considered to have reached his or her maximum cumulative leave.

Mandatory Leaves of Absence
A mandatory leave of absence can be imposed in circumstances in which a student:

- presents a substantial risk of harm to self or others or is failing to carry out substantial self-care obligations; or
- significantly disrupts the educational or other activities of the University community; or
- is unable to participate meaningfully in educational activities; or
- requires a level of care from the University community that exceeds the resources and staffing that the University can reasonably be expected to provide for the student’s well-being.

Students whose circumstances warrant a review under the Dean’s Leave of Absence Policy (https://studentaffairs.stanford.edu/policies/deans-leave-absence) are apprised, in writing, of University concerns and are provided an opportunity to respond to concerns in writing or in person or via telephone before a review committee convened by the Dean of Student Life. Students placed on mandatory leave of absence can appeal an unfavorable decision to the Vice Provost for Student Affairs. The University can condition a student’s return to registered student status on such requirements as the University deems appropriate in the individual case (such as, in the case of a leave for medical reasons, proof of treatment and/or an interview with a health care professional at Vaden Health Center (http://vaden.stanford.edu) or Counseling and Psychological Services (https://vaden.stanford.edu/caps-and-wellness) or its designee). The Dean of Student Life publishes the full Dean’s Leave of Absence Policy (https://studentaffairs.stanford.edu/policies/deans-leave-absence) on its web site. Information on tuition refunds is available in the “Refunds (p. 27)” section of this bulletin.

Discontinuation and Reinstatement
A student’s academic degree program may be discontinued if the student:

- fails to be enrolled by the study list deadline; or
- fails to be approved for a leave of absence by the start of the term; or
- voluntarily terminates graduate studies; or
- is dismissed from graduate studies for academic reasons; or
- is expelled from the University.

Students who fail to be either enrolled by the final study list deadline or approved for a leave of absence by the start of the term or after a voluntary withdrawal are required to apply for reinstatement (https://stanford.box.com/appgradreinstate) through the Graduate Admissions office before they can return to the same degree program. Students whose master’s program or doctoral candidacy has expired must petition to have extensions of their programs or candidacy approved by their departments before reinstatement may be approved.

The decision to approve or deny reinstatement is made by the student’s department or program. Departments are not obliged to approve reinstatements of students. Reinstatement decisions are made at the discretion of the department or the program and may be based on the applicant’s academic status when last enrolled, activities while away from campus, the length of the absence, the perceived potential for successful completion of the program, and the ability of the department to support the student both academically and financially, as well as any other factors or considerations regarded as relevant by the department or program.

Reinstatement information is available from the Graduate Admissions office (https://gradadmissions.stanford.edu). Successful applicants are billed. Department-approved reinstatement applications must be submitted prior to the first day of the term for which re-enrollment is requested if the student is registering for courses. International students must submit reinstatement applications early enough to allow time for I-20 or DS-2019 production, visa interview, etc.

In the rare circumstance where a student who had been dismissed for academic reasons wishes to return to the same degree program, and
where reinstatement was not precluded at the time of the dismissal, the student should request reinstatement as described above. In this circumstance, the degree program may review such relevant information as course work completed elsewhere or any other factors deemed to be appropriate for consideration.

Conditions for reinstatement may be established at the discretion of the program. The decision to approve or deny reinstatement is made by the department or program to which the student is seeking reinstatement, and is in its discretion. In addition, the department or program retains the right to condition reinstatement on such academic or other conditions as it deems appropriate.

Students who have been expelled from Stanford University are not permitted to apply for reinstatement.

Terminal Graduate Registration (TGR)

Doctoral students who have been admitted to candidacy, completed all required courses and degree requirements other than the University oral exam and dissertation, completed 135 units or 10.5 quarters of residency (if under the old residency policy), and submitted a Doctoral Dissertation Reading Committee form, may request Terminal Graduate Registration status to complete their dissertations. Students pursuing Engineer degrees may apply for TGR status after admission to candidacy, completion of all required courses, and completion of 90 units or six quarters of residency (if under the old residency policy). Students enrolled in master's programs with a required project or thesis may apply for TGR status upon completion of all required courses and completion of 45 units. Students with more than one active graduate degree program must be TGR-eligible in all programs in order to apply for TGR status.

The TGR Final Registration status may also be granted for one quarter only to a graduate student who is working on incompletes in his or her final quarter or registering for one final term after all requirements are completed when Graduation Quarter is not applicable. TGR requirements above apply. Doctoral students under the term-based residency policy need nine quarters of residency to qualify for TGR Final Registration Status.

Each quarter, TGR students must enroll in the 801 (for master's and Engineer students) or 802 (for doctoral students) course in their department for zero units, in the appropriate section for their adviser. TGR students register at a special tuition rate. Students in TGR status enrolled in a course numbered 801 or 802 are certified as enrolled full time. TGR students may enroll in up to 3 units of course work per quarter at this tuition rate. Within certain restrictions, TGR students may enroll in additional courses at the applicable unit rate. The additional courses cannot be applied toward degree requirements since all degree requirements must be complete in order to earn TGR status. See the "Minimum Progress Requirements for Graduate Students (p. 55)" of this bulletin for information about satisfactory progress requirements for TGR students.

Graduate Petition for Part-time Enrollment (formerly Graduate Tuition Adjustment)

Requests to enroll for fewer than eight units during the academic year are approved only in specific circumstances. Graduate students who need fewer than 8 remaining units to complete degree requirements or to qualify for TGR status, may register for one quarter on a unit basis (3 to 7 units) to cover the deficiency. This status may be used only once during a degree program. International students should consult with Bechtel International Center (https://bechtel.stanford.edu) prior to requesting part-time enrollment to ensure compliance with visa regulations.

Students with disabilities covered under the Americans with Disabilities Act may enroll in an approved reduced course load as recommended by the Office of Accessible Education (OAE) (https://oae.stanford.edu). Matriculated and enrolled pregnant graduate students may request up to two quarters of part-time enrollment for an approved Childbirth Academic Accommodation; see the "Childbirth Accommodation Policy (p. 55)" section of this bulletin and the GAP 5.9, Childbirth Accommodation (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5/subchapter-9/page-5-9-1).

All students requesting reduced enrollment need to complete and file the Graduate Petition for Part-time Enrollment (https://stanford.box.com/tuitadjree) form.

Graduation Quarter Status

Registration is required for the term in which a student defends and/or submits a dissertation, or has a degree conferred. Students who meet all the following conditions are eligible to be assessed a special tuition rate for the quarter in which they are receiving a degree:

1. All course work, degree requirements, and residency requirements for all graduate degree programs, including joint degree programs, have been completed prior to the start of the requested Graduation Quarter.
2. The student has formally applied to graduate in Axess.
3. The student has only to defend and/or submit the dissertation, project, or master's thesis by the deadline for submission in the term designated as the graduation quarter.
4. The student has filed all necessary forms regarding graduation quarter before the first day of the term chosen as graduation quarter.

A student who is returning after reinstatement in which all degree requirements are complete, with the exception of the dissertation defense and/or submission, is eligible to reinstate into a Graduation Quarter status.

Students on graduation quarter are registered at Stanford and, therefore, have the rights and privileges of registered students. Graduation Quarter status may be used only once during a degree program. There is a tuition rate of $150 for the graduation quarter. Students in Graduation Quarter status and enrolled in a course numbered 801 or 802 are certified as enrolled full time.

Conferral of Degrees

Upon recommendation to the Senate of the Academic Council by the faculty of the relevant departments or schools and the Committee on Graduate Studies, degrees are awarded four times each year, at the conclusion of Autumn, Winter, Spring, and Summer terms. All diplomas, however, are prepared and distributed after degree conferral in accordance to the distribution dates listed on the Registrar's Office (https://registrar.stanford.edu/students/diplomas) web site.

Students must apply for conferral of a graduate degree by filing an Application to Graduate in Axess by the deadline for each term. The deadlines are available in the Academic Calendar (https://registrar.stanford.edu/resources-and-help/stanford-academic-calendar). A separate application must be filed for each degree program and for each conferral term.

Requests for conferral are reviewed by the Office of the University Registrar and the student's department to verify completion of degree requirements. Students must be registered in the term of degree conferral. Students with unmet financial obligations resulting in the placement of a hold on their registration cannot receive a transcript, statement of completion, degree certificate, or diploma until the hold is released by the Office of Student Financial Services. An academic record where no other degree objective is being pursued is permanently
frozen after the final degree conferral, and all subsequent grade change requests or changes to the student record are not permitted.

Students are typically expected to apply to graduate when they have completed their degree requirements. The University, however, reserves the right to confer a degree on a student who has completed all of the requirements for a degree even though the student has not applied to graduate; such an individual would then be subject to the University's usual rules and restrictions regarding future enrollment or registration.

Students who wish to withdraw a request for conferral or make changes to the Application to Graduate should submit the Withdrawal of Application to Graduate form (https://stanford.box.com/withdraw-app-2-grad) to the Student Services Center (https://studentservicescenter.stanford.edu) by the late application to graduate deadline. Students who withdraw their graduation applications or fail to meet degree requirements must reapply to graduate in a subsequent term.

Stanford University awards no honorary degrees.

Advising and Credentials

Advising

Academic advising by Stanford faculty is a critical component of all graduate students' education. By the start of their first term, all graduate students should identify or be paired by the department with a faculty adviser who assists them in planning a program of study to meet degree requirements. The process by which students are matched with faculty advisers varies by department or program.

Departments and programs may establish specific expectations and requirements for academic advising, and should inform graduate students and faculty of these policies. Students are obliged to follow department procedures for identifying advisers and committee members for their dissertation reading and university oral examinations. Departments should make every effort to assist doctoral students who are not yet admitted to candidacy in finding an appropriate adviser. The department should also inform doctoral students in a timely fashion about procedures for selecting a dissertation adviser, reading committee members, and orals committee members.

Occasionally, a student's research may diverge from the area of competence of the adviser, or irreconcilable differences may occur between the student and the faculty adviser. In such cases, the student or the faculty adviser may request a change in assignment. If the department decides to grant the request, every reasonable effort must be made to pair the student with another suitable adviser. This may entail some modification of the student's research project.

In the rare case where a student's dissertation research on an approved project is in an advanced stage and the dissertation adviser is no longer available, every reasonable effort must be made to appoint a new adviser, usually from the student's reading committee. This may also require that a new member be added to the reading committee before the draft dissertation is evaluated, to keep the reconstituted committee in compliance with the University requirements for its composition.

In addition to this bulletin and the GAP 3.3. Academic Advising (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3), several University policies apply to all faculty-student advising relationships. The University's Research Policy Handbook 1. Conduct of Research (https://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research) outlines policies and practices related to the conduct of research, including obligations to students, staff, and sponsors. The Administrative Guide 1.1.1. University Code of Conduct (https://adminguide.stanford.edu/chapter-1/subchapter-1/policy-1-1-1) articulates the policy that all members of the Stanford community are responsible for sustaining the highest ethical standards and values of the university and of the broader community.

Additional information and resources about advising can be found on the Vice Provost for Graduate Education's Advising & Mentoring web pages (https://vpge.stanford.edu/academic-guidance/advising-mentoring).

Teaching Credentials

Stanford University is accredited by the California Commission on Teacher Credentialing and the National Council for Accreditation of Teacher Education and is authorized to recommend candidates for credentials. The University offers a complete training program for both Single (Secondary) and Multiple Subject (Elementary) teaching credentials. Upon completion of a Stanford approved program, the credentials allow teachers to serve in California public schools.

Current Stanford undergraduates wishing to complete the requirements for a teaching credential should apply to the coterminal program at the Graduate School of Education (https://ed.stanford.edu/admissions/coterminal). All other applicants should apply directly to the Stanford Teacher Education Program (https://ed.stanford.edu/step) (STEP) at the Graduate School of Education.
TRANSFER WORK

Stanford accepts a small number of undergraduate transfer students each year. Requirements for admission (http://www.stanford.edu/dept/uga/application/transfer) are described as part of the undergraduate application process and are listed on the Undergraduate Admission (http://admission.stanford.edu) web site. Stanford University has a designated adviser who coordinates support for transfer students.

In conjunction with appropriate review bodies, the Office of the University Registrar evaluates and records the amount of transfer credit and advanced placement test credit an undergraduate can apply toward graduation requirements. Stanford awards credit based on course work completed at U.S. colleges or universities accredited by a regional accrediting association; or course work completed at international colleges or universities of recognized standing. Credit may also be awarded for certain Advanced Placement programs, International Baccalaureate Program, GCE, French Baccalaureate, and the German Abitur examinations.

See the "Advanced Placement (p. 36)" section of this Bulletin for information concerning Stanford’s policy on credit for Advanced Placement work. Details on how to request credit for advanced placement examinations are available at the Registrar’s Advanced Placement site (http://studentaffairs.stanford.edu/registrar/students/ap).

Undergraduate Transfer Work

Academic credit for work done elsewhere may be allowed toward a Stanford bachelor’s degree under the following rules and conditions:

1. Credit may be granted for work completed at institutions in the U.S. only if the institutions are regionally accredited.
2. Study in institutions outside the U.S., when validated by examination results, tutorial reports, or other official evidence of satisfactory work, may be credited toward a Stanford bachelor’s degree, subject to the approval of the credit evaluator and the appropriate departments.
3. Credit is officially allowed only after the student has been unconditionally admitted to Stanford.
4. Credit is allowed for work completed at institutions in the U.S. only on the basis of an official transcript received by the Registrar at Stanford directly from the institution where the credit was earned. In order for transfer credit to be awarded, students must submit an official transcript that clearly indicates all of the below information for each course:
   - Course credits earned
   - Course titles or descriptions
   - Final grades earned
   - Course codes/numbers
5. Credit from another institution may be transferred for courses which are substantially equivalent to those offered at Stanford University on the undergraduate level, subject to the approval of the credit evaluator. A maximum of 20 quarter units may represent courses which do not parallel specific undergraduate courses at Stanford, again, subject to the approval of the credit evaluator as to quality and suitability.
6. Course work cannot duplicate, overlap, or regress previous work.
7. Transfer course work cannot count towards secondary school diploma and/or graduation requirements.
8. For students interested in fulfilling a Ways of Thinking/Doing (Ways) breadth requirement through transfer work, transfer courses are reviewed to determine if courses can be certified to fulfill Ways requirements. Requests for fulfilling Ways requirements in transfer require pre-approval prior to course enrollment and the pre-approval requests must be submitted by the quarterly deadline in the quarter prior to the term in which students intend to enroll in the transfer course, as defined on the Ways (https://undergrad.stanford.edu/programs/ways/getting-credit/ways-credit-classes-taken-other-universities) web site. Courses must be taken for a minimum of 3 quarter units (2 units in the case of Creative Expression only) and must be taken for a letter grade.
9. Transfer work can be used to satisfy a department major or minor requirement. The transfer work must first be officially accepted into the University through the Office of the University Registrar. After the transfer credit has been approved and posted by the Office of the University Registrar, the departments determine if the approved transfer work can be used to satisfy a department major or minor requirement.
10. The credit allowed at Stanford for one quarter’s work may not exceed the number of units that would have been permissible for one quarter if the work had been done at Stanford; for work done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence.
11. Credit is allowed at Stanford for work graded ‘C’ or above, but not for work graded “D” or below.
12. No more than 15 quarter units of credit for work done elsewhere may be counted toward a bachelor's degree at Stanford (including advanced placement test credit).
13. Credit earned in extension, correspondence, and online courses is transferable only if the university offering the courses allows that credit toward its own bachelor’s degree. Such credit is limited to a maximum of 45 quarter units for extension courses, a maximum of 15 quarter units for correspondence and online study, and a maximum of 45 quarter units for the combination of extension, correspondence, and online courses. Online and independent study courses are not eligible for Ways credit.
14. Credit earned in military training and service is not transferable to Stanford, unless offered by an accredited college or university in the U.S. and evaluated as above by the credit evaluator.

See the Registrar’s web site (https://registrar.stanford.edu/students/transfer-credit-and-advanced-placement/transfer-credit-policies) for additional information regarding transfer credit policies and procedures.

Graduate Residency Transfer Credit

After at least one quarter of enrollment, students pursuing an Engineer, D.M.A., or Ph.D. may apply for transfer credit for graduate work done at another institution. After earning their master’s at Stanford are not eligible for transfer residency credit, nor are any master’s degree students. Ph.D. or D.M.A. students may only apply a total of 45 units of transfer credit and credit earned for a Stanford master's degree toward the PhD residency total.
Students enrolled at Stanford who are going to study elsewhere during their degree program should obtain prior approval of any transfer credit sought before their departure.

The following criteria are used by the department in determining whether, in its discretion, it awards transfer credit for graduate-level work done at another institution:

1. Courses should have comparable Stanford counterparts that are approved by the student’s department. A maximum of 12 units of courses with no Stanford counterparts and/or research units may be granted transfer credit.

2. The student must have been enrolled at the other institution in a student category which yields graduate credit. The maximum amount of credit given for extension and nonmatriculated (non-degree) courses is 12 units. No transfer credit is given for online or correspondence work.

3. Courses must have been taken after the conferral of the bachelor's degree. The only exception is for work taken through programs structured like the Stanford coterminal bachelor's/master's program.

4. Courses must have been completed with a grade point average (GPA) of 3.0 (B) or better. Pass grades are accepted only for courses for which letter grades were not an option and for which the standard of passing is ‘B’ quality work.

5. Courses must have been taken at a regionally accredited institution in the U.S. or at an officially recognized institution in a foreign country. Courses taken at foreign universities must be at the level of study comparable to a U.S. graduate program.

The Application for Graduate Residency Credit is reviewed by the department and the Office of the University Registrar. For transfer credit done under a system other than the quarter system, the permissible maximum units are calculated at an appropriate ratio of equivalence. One semester unit or hour usually equals 1.5 quarter units.
VETERANS AND MILITARY BENEFITS

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with Veterans Affairs (VA) educational benefits and Department of Defense (DoD) tuition assistance.

Stanford University has made a good faith effort to comply with the Principles of Excellence established by Executive Order 13607. Stanford University participates in the Department of Defense Voluntary Education Partnership program so that eligible active duty service members are able to obtain Tuition Assistance from their military branch as administered by the Department of Defense. The Office of Military-Affiliated Communities in the Student Services Center (http://www.stanford.edu/group/studentservicescenter) serves as the first point of contact for veterans’ educational benefits assistance and DoD tuition assistance.

Stanford certifies enrollment for veterans’ educational benefits for students in degree seeking programs, and students in one of 23 VA approved certificate programs offered through the Stanford Center for Professional Development. Other nonmatriculated and certificate programs are not eligible. All students eligible to receive veterans’ benefits or DoD tuition assistance while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student’s degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an adviser to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs educational benefits or DoD tuition assistance. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs or DoD as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student’s degree program is changed. Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits or DoD tuition assistance have their prior education and training evaluated up to the credit limits outlined in the “Residency Policy for Graduate Students (p. 50)” and “Undergraduate Degrees and Programs (p. 29)” sections of this bulletin. As an exception to that policy, students in master’s programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units.

VA Status

In order to activate students’ VA educational benefits at Stanford the Office of the University Registrar requires that students submit the following forms:

- A copy of the Certificate of Eligibility distributed by the VA
- Veterans’ Benefits - Statement of Rights and Responsibilities (online form)
- DD-214 (if applicable)

It is the students’ responsibility to ensure that all forms are submitted to the Office of University Registrar in order to activate the student as VA benefits receiving student.

In order to comply with VA regulations, students are responsible for the following:

- Obtain official transcripts from all postsecondary institutions attended, whether VA benefits were received or not.
- Report any changes in enrollment status to the Office of the University Registrar.
- Report any changes that are made to a degree plan. Undergraduates declaring or making changes to their major(s), minor(s), honor(s), or degree program(s) in Axess and Graduates adding or removing degree programs through the Graduate Program Authorization Petition in Axess should submit a Student Services Center Help ticket (attention VA Certifying Official) to report degree plan change.
- General overpayments of VA benefits are the responsibility of the student, even if the payment was submitted directly to the school on the student’s behalf.
- Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student’s degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with their adviser to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.
- If concurrently enrolled with another college/university, notify both Stanford and the host institution.
- Undergraduates only: VA regulations require undergraduates to declare their major by the end of their sophomore year. Stanford cannot certify enrollment to the VA beyond sophomore year unless a major has been declared. Note that a student can change their major at any time.

Certification

The Office of the University Registrar certifies enrollment to the VA Office quarterly, approximately one week after the Preliminary Study List Deadline. See the Stanford Academic Calendar for exact dates in each quarter.

After the Final Study List deadline, the Office of the University Registrar confirms that your enrollment has not changed in Axess. If enrollment has increased or decreased your enrollment certification is adjusted.

The Office of the University continues to certify the student to the VA until the student leaves the program or unless notified by the student and/or the VA to stop the process of certification.

General overpayments of VA benefits are the responsibility of the student. If the enrollment change has resulted in tuition overpayment, the student is responsible for paying the tuition and fees back to the VA. If the student is a Ch. 33 recipient and the enrollment change has resulted in tuition overpayment, a refund check will be issued by Stanford to the student. It remains the student’s responsibility to provide tuition and fees back to the VA. If the enrollment change has resulted in underpayment, the VA sends the difference in tuition fees to the student, excluding Ch. 33 recipients. If you are a Ch. 33 recipient, fees will be paid directly to the institution in a separate payment.

Programs Subject to Restriction

Note that the following programs cannot be certified due to VA and federal regulations:
• Certificates programs for non-matriculated students: The VA defines “matriculated” as having been formally admitted to a college or university. Per the VA, educational benefits cannot be paid to “non-matriculated” college or university students. Hence, any certificate program that does not officially admit its students into Stanford University cannot be certified.

• Visiting Students Programs: Stanford cannot certify visiting students unless they meet one of the following conditions:

1. The student has an approved parent letter from the home institution which guarantees that the courses can be transferred back to original program.
2. The student is pending admission to a Stanford degree program and is required to take a prerequisite course(s). In that case the student can be certified for two terms.

• Medical Residencies/Fellowship programs that are not certified by the ACGME; these residencies are not allowed to be certified as on the job training. This is according to VA guidelines and the Federal Code of Regulations. See the School of Medicine for a full list of the fellowship/residency programs.

All students eligible to receive veterans’ benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Financial Aid

The Post-9/11 GI Bill, also known as Chapter 33, is the most commonly used VA educational benefits program at Stanford. This program provides funding for tuition, required fees, books and housing. The level of an individual student’s Chapter 33 benefits is determined by the qualifying veteran’s length of military service since 9/11/2001. For the 2015-16 academic year, the base benefit for tuition and fees is capped at $21,084.89. Eligible students may also receive funds through the Yellow Ribbon Provision.

Most of the VA educational benefit programs pay benefits directly to students on a monthly basis. However, under the Post-9/11 GI Bill (Chapter 33), the VA sends tuition and fees benefits to Stanford, where the Financial Aid Office is responsible for applying the funds to the student account (university bill). Chapter 33 books and housing benefits are sent directly to students monthly. Students may need to apply the housing benefits to the university bill to pay for on-campus room and board.

Yellow Ribbon Provision

Stanford elects on a yearly basis to participate in the Yellow Ribbon Program. Under this provision Stanford provides an annual contribution to supplement the Chapter 33 base tuition benefit. The VA matches Stanford’s Yellow Ribbon contribution. For the 2015-16 academic year, Stanford’s annual Yellow Ribbon contribution for undergraduate students is $3,000, with the VA providing a matching amount of $3,000. For graduate and professional students, the amount of Stanford’s Yellow Ribbon contribution varies by school and program; see the Yellow Ribbon information on the University Registrar’s web site.

Undergraduates

Undergraduates may apply for need-based financial aid from Stanford to supplement VA educational benefits. If the financial aid application demonstrates financial need beyond the amount of expected VA benefits, the student will be awarded institutional aid to meet the additional need.

If the student will be receiving VA educational benefits transferred from a parent, the student will be treated as a dependent student for financial aid purposes. The student’s parents’ income and asset information will be considered in determining eligibility for need-based aid from Stanford. If the student is a veteran, the student will most likely be treated as an independent student and will not need to provide parent information. Receipt of VA educational benefits does not impact your eligibility for federal student loan programs.

VA educational benefits are treated like other outside awards in that they can reduce or replace the Student Responsibility portion of the aid package. VA benefits do not reduce or replace the Parent Contribution in the determination of eligibility for need-based Stanford aid.

Graduate Students

Schools and departments are responsible for providing the Yellow Ribbon contribution for eligible graduate students. The Financial Aid Office will coordinate receipt of funds with responsible individuals in each school. Receipt of VA educational benefits does not impact your eligibility for federal student loan programs.

Veterans’ Educational Benefits

The Office of the University Registrar serves as the liaison between the University, its students, and the various federal, state, and local agencies concerned with veterans’ benefits. Stanford certifies enrollment for students in degree seeking programs and students in one of 24 VA approved certificate programs offered through the Stanford Center for Professional Development. Other non-matriculated and certificate programs are not eligible. All students eligible to receive veterans’ benefits while attending the University are urged to complete arrangements with the appropriate agency in advance of enrollment.

Stanford University is required to certify only those courses that meet minimum graduation requirements. Courses not directly related to a student’s degree program or courses beyond those required for a specific degree program are not certified. Undergraduates should meet with an advisor to develop a course enrollment plan. Graduate students should have their departments approve their study lists as meeting graduation requirements on a quarterly basis.

To comply with federal regulations concerning credit for previous training (38 CFR 21.4253), Stanford University is required to evaluate all previous education and training completed elsewhere to determine what credit, if any, should be granted to students eligible to receive Veterans Affairs (VA) educational benefits. Stanford is required to complete an evaluation; credit is granted when appropriate. Credit is evaluated toward the degree program registered with Veterans Affairs as determined by the Office of the University Registrar in conjunction with the relevant academic department(s) or program(s). All relevant policies regarding transfer credit apply. In addition, this evaluation occurs each time a student’s degree program is changed.

Subject to current federal and University guidelines, students eligible for receipt of VA educational benefits have their prior education and training evaluated up to the credit limits outlined in the “Residency Policy for Graduate Student (p. 57)” section of this bulletin. As an exception to that policy, students in master’s programs in the schools of Earth Sciences, Education, Engineering, Humanities and Sciences, Law, Medicine, and Graduate Business are allowed a maximum of 6 transfer (quarter) units. Students should consult with the Office for Military Affiliated Communities (OMAC) (https://military.stanford.edu/gi-bill-benefits) for consideration of optimal use of educational benefits.

Stanford participates in the Yellow Ribbon provision of the Post 9/11 GI Bill (Ch. 33). If a matriculated student qualifies for Chapter 33 benefits at the 100% level, the student may be eligible to receive additional funding through the Yellow Ribbon Program. Under this program, Stanford provides an annual award of $3,000 to undergraduate students to supplement the Chapter 33 base tuition benefit. The VA matches Stanford’s Yellow Ribbon contribution, so the student receives a combined total of $6,000 in additional funds. Certain matriculated graduate students may be eligible for the Yellow Ribbon provision,
the amount of institutional contribution varies by school and program at
the graduate level.

See the Office for Military Affiliated Communities (OMAC) web site
(https://military.stanford.edu/gi-bill-benefits) for additional information
about veterans’ educational benefits.
Compliance with University Policies/Registration Holds

Registration as a student constitutes a commitment by the student to abide by and accept University policies, rules, requirements, and regulations, even when such policies, rules, requirements, and regulations appear to conflict with ASSU policies or procedures. The policies, rules, requirements, and regulations that students must abide by include (but are not limited to) those concerning registration, academic performance, student conduct, Title IX, health and safety, housing, use of the libraries and computing resources, intellectual property (including completing and signing the SU-18), operation of vehicles on campus, University facilities, and the payment of fees and assessments. Some of these are set forth in this bulletin while others are available in relevant University offices.

The University reserves the right to withhold registration privileges or to cancel the registration of any student: who is not in compliance with its policies, rules, requirements, or regulations; or for reasons pertaining to academic performance, health and wellness, qualification to be a student, behavioral conduct, or the safety of the University community.

University Communication with Students

Stanford University uses electronic means (such as email, texts, and the Internet) as a primary method of communication and of providing billing, payment, and enrollment services. Signatures or acknowledgments provided by the student electronically to Stanford via Stanford systems and/or @stanford.edu email are valid and legally binding.

Notification/Obligation to Read Email

For many University communications, email to a student’s Stanford email account is the official form of notification to the student, and emails sent by University officials to such email addresses will be presumed to have been received and read by the student. Emails and forms delivered through a SUNet account by a student to the University may likewise constitute a formal communication, with the use of this password-protected account constituting the student’s electronic signature.

Registration and Study Lists

The preliminary study list deadline is the first day of classes of each quarter during the academic year. As early as possible, but no later than this deadline, students (including those with TGR status) must submit to the Office of the University Registrar via Axess, a study list to enroll officially in classes for the quarter. Students are expected to be enrolled “at status” by the preliminary study list deadline; meaning that students must be enrolled in sufficient units to meet requirements for their status, whether full-time, or on approved special registration status. Students who enroll in more units than their anticipated tuition charge covers will be charged the additional tuition. They may not enroll in courses for zero units unless those courses, like TGR, are defined as zero-unit courses. Zero-unit courses, excluding TGR courses, require concurrent enrollment with unit-bearing courses in all quarters. Undergraduates are subject to academic load limits described in the "Amount of Work (p. 67)" section of this bulletin. Students will be charged a $200 late study list fee for submitting their study lists after the quarterly deadline.

The University reserves the right to withhold registration from, and to cancel the advance registration or registration of, any student having unmet obligations to the University.

Study List Changes

Students may add courses or units to their study lists through the end of the third week of classes. (Individual faculty may choose to close their classes to new enrollments at an earlier date.) Courses or units may be added only if the revised program remains within the normal load limits.

Courses or units may be dropped by students through the end of the third week of classes, without any record of the course remaining on the student’s transcript. No drops are permitted after this point. The Final Study List deadline is the last day for tuition reassessment for dropped courses or units.

A student may withdraw from a course after the final study list deadline through the end of the eighth week of each quarter. In this case, a grade notation of ‘W’ (withdrawal) is automatically recorded on the student’s transcript for that course. There are no tuition reassessments for withdrawing from individual courses. Students who do not officially withdraw from a class by the end of the eighth week are assigned the appropriate grade or notation by the instructor to reflect the work completed.

Through the end of the eighth week of classes, students may choose the grading option of their choice in courses where an option is offered.

If the instructor allows a student to take an ’I’ (incomplete) in the course, the student must make the appropriate arrangements for that with the instructor by the last day of classes.

The deadlines described above follow the same pattern each quarter but, due to the varying lengths of Stanford’s quarters, they may not always fall in exactly the week specified. Students should consult the University’s academic calendar (http://studentaffairs.stanford.edu/registrar/academic-calendar) for the deadline dates each term. Other deadlines may apply in Law, Graduate School of Business, Medicine, and Summer Session.

Repeated Courses

Students may not enroll in courses for credit for which they received either Advanced Placement (AP) or transfer credit. If students enroll in courses at Stanford for which they received equivalent AP unit credit, the duplicating AP unit credit will be removed.

Some Stanford courses may be repeated for credit; they are specially noted in this bulletin. Most courses may not be repeated for credit. Under the general University grading system, when a course which may not be repeated for credit is retaken by a student, the following special rules apply:

1. A student may retake any course on his or her transcript, regardless of grade earned, and have the original grade, for completed courses only, replaced by the notation ‘RP’ (repeated course). When retaking a course, the student must enroll in it for the same number of units originally taken. When the grade for the second enrollment in the course has been reported, the units and grade points for the second course count in the cumulative grade point average in place of the grade and units for the first enrollment in the course. Because the notation ‘RP’ can only replace grades for completed courses, the notation ‘W’ cannot be replaced by the notation ‘RP’ in any case.
2. A student may not retake the same course for a third time unless he or she received a ‘NC’ (no credit) or ‘NP’ (not passed) when it was taken and completed the second time. Undergraduate students must file a petition for approval to take the course a third time with the
of Religious Life at (650) 723-1762 or see the Religious Life bulletin. The notification of rights under FERPA affords students certain rights with respect to their education records. They are: 1. The right to inspect and review the student’s education records within 45 days of the date the University receives a request for access. Current and former students who wish to make a FERPA-related request to view records should submit to the Office of the University Registrar an online request that identifies the record(s) the student wishes to inspect:
   • Request for records by current student and former students who still have an active Stanford ID (https://web.stanford.edu/dept/registrar/forms/secure/records-request-ferpa.fb) (typically students who were enrolled within the last five years)
   • Request for records by former students who do not have an active Stanford ID (https://web.stanford.edu/dept/registrar/forms/records-request-ferpa.fb)

Students are advised to provide complete information in order to assist the University in following up on the request. Federal law requires that the University provide access to requested extant records within 45 days. A Registrar’s Office official will make arrangements for access and notify the student of the time and place where the records may be inspected. If the records requested are not under the control of the Registrar’s Office, the Registrar’s Office will make arrangements for the relevant office to provide the records within the time frame established under the law.

2. The right to request the amendment of the student’s education records that the student believes are inaccurate, misleading, or otherwise in violation of the student’s privacy rights under FERPA.
   a. A student may ask the University to amend the record that he or she believes is inaccurate or misleading. The student should write to the University’s official responsible for the record (with a copy to the University Registrar), clearly identify the part of the records he or she wants changed, and specify why it should be changed.
   b. If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of his or her right to a hearing regarding the request for amendment.
   c. Additional information regarding the hearing procedures is provided to the student when notified of the right to a hearing.

3. The right to consent to disclosures of personally identifiable information contained in the student’s education records, except to the extent that FERPA authorizes disclosure without consent. FERPA contains various exceptions to the general rule that the University should not disclose education records without seeking the prior written consent of the student. The following circumstances are representative of those in which education records (and information drawn from education records) may be disclosed without the student’s prior written consent:
   a. Upon request, the University may release Directory Information (see the “Directory Information” section of this bulletin below). School officials who have a legitimate educational interest in a student’s education record may be permitted to review it. A school official is: a person employed by the University in an administrative, supervisory, academic or research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the University has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student or volunteer serving on an official committee (or representing a recognized student group), such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if the official

### Religious Holidays

Students planning not to attend class or take an exam because of a religious observance are expected to convey this information to instructors in advance. The Office for Religious Life makes available to faculty, staff, and students a list of significant religious observances at the beginning of each academic year. For further information, contact the Deans for Religious Life at (650) 723-1762 or see the Religious Life web site.

### Religious Holidays

Students planning not to attend class or take an exam because of a religious observance are expected to convey this information to instructors in advance. The Office for Religious Life makes available to faculty, staff, and students a list of significant religious observances at the beginning of each academic year. For further information, contact the Deans for Religious Life at (650) 723-1762 or see the Religious Life web site.

### Amount of Work

The usual amount of work for undergraduate students is 15 units per quarter; 180 units (225 for dual degree students) are required for graduation. Registration for fewer than 12 units is rarely permitted and may cause the undergraduate to be ineligible for certification as a full-time student. The maximum is 20 units (21 if the program includes a 1-unit activity course). Requests for exception to the maximum may be considered for compelling reasons, the approval of which may include conditions or restrictions. A past superior academic performance is not considered to be sufficient justification for exceeding the maximum. Petitions for programs of fewer than 12 or more than 20 units must be submitted to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research, Sweet Hall, first floor. For additional information regarding satisfactory academic progress, refer to the "Academic Progress (p. 74)" section of this bulletin.

Matriculated graduate students are expected to enroll for at least eight units during the academic year; schools and departments may set a higher minimum. Petitions for programs of fewer than 8 must be signed by the student’s department and submitted for consideration to the Office of the University Registrar. Graduate students are normally expected to enroll in no more than 24 units; registration for more than 24 units must be approved by the department. Under certain circumstances, graduate students may register on a part-time basis. See the "Tuition, Fees, and Housing (p. 22)" section of this bulletin.

Enrollment for coterminal students is determined by their tuition group. See Tuition (p. 47) in the "Coterminal Master’s Degrees" section of this bulletin.

Undergraduates and graduate students with disabilities who may seek a reduced course load should contact the Office of Accessible Education (http://studentaffairs.stanford.edu/oae).

### Unit of Credit

Guidance for faculty and instructors on how to comply with this policy is available on the Registrar’s web site.

Every unit for which credit is given is understood to represent approximately three hours of actual work per week for the average student. Thus, in lecture or discussion work, for 1 unit of credit, one hour per week may be allotted to the lecture or discussion and two hours for preparation or subsequent reading and study. Where the time is wholly occupied with studio, field, or laboratory work, or in the classroom work of conversation classes, three full hours per week through one quarter are expected of the student for each unit of credit; but, where such work is supplemented by systematic outside reading or experiment under the direction of the instructor, a reduction may be made in the actual studio, field, laboratory, or classroom time as seems just to the department.
needs to review an education record in order to fulfill his or her responsibility to Stanford or to the student.

c. The University discloses education records without consent to officials of another school, in which a student seeks or intends to enroll, upon request of officials at that other school.

d. The University may choose to disclose education records (and information drawn from education records) to either supporting parent(s) or guardian(s) where the student is claimed as a dependent under the Internal Revenue Code.

e. The University may inform persons including either parent(s) or guardian(s) when disclosure of the information is necessary to protect the health or safety of the student or other persons.

f. For students under the age of 21, the University may notify either parent(s) or guardian(s) of a violation of any law or policy relating to the use of alcohol or controlled substances.

g. The University must provide records in response to lawfully issued subpoenas, or as otherwise compelled by legal process.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the University to comply with the requirements of FERPA.

The name and address of the office that administers FERPA is: Family Policy Compliance Office, U.S. Department of Education, 400 Maryland Avenue, SW, Washington, DC 20202-4605.

Sharing Information with Parents

Students are encouraged to maintain an ongoing, open dialogue with parents throughout their careers at Stanford about academic progress and personal development. Most student difficulties are resolved at Stanford without involving parents. The University does recognize, however, that there are some exceptional situations where parental involvement may be appropriate to assist a student through a difficult circumstance. Under those circumstances, Stanford may (but is not required to) choose to disclose information to parents if permitted by law.

Under the Family Educational Rights and Privacy Act (FERPA), Stanford is permitted to disclose information drawn from education records to parents if one or more parent claims the student as a dependent for federal tax purposes. Some laws, especially those relating to medical and mental health care, prohibit the disclosure of information without the student’s consent, even where the student is a tax dependent.

Directory Information

The University regards the following items of information as "directory information," that is, information that the University may make available to any person upon specific request (and without student consent):

- Name*
- Email addresses
- Specific quarters or semesters of registration at Stanford
- Stanford degree(s) awarded and date(s)
- Major(s), minor(s), and field(s)
- University degree honors
- Student theses and dissertations
- Participation in officially recognized sports or activities*
- Weight and height of members of athletic teams*
- Institution attended immediately prior to Stanford
- ID card photographs

For more information, see Stanford’s FERPA (http://studentaffairs.stanford.edu/registrar/students/ferpa) web page.

Students may prohibit the release of any of the items listed above (except those with an * ) by designating which items should not be released on the Privacy function of Axess. Students may prohibit the release of all directory information listed above after an appointment with the Office of the University Registrar to discuss the ramifications of this action. Student theses and dissertations can be restricted through the publishing options and embargo settings students select during submission.

Students, faculty, and others with questions regarding student records should contact the Office of the University Registrar.

Consent to Use of Photographic Images

Registration as a student and attendance at or participation in classes and other campus and University activities constitutes an agreement by the student to the University’s use and distribution (both now and in the future) of the student’s image or voice in photographs, video or audio capture, or electronic reproductions of such classes and other campus and University activities.

If any student in a class where such photographing or recording is to take place does not wish to have his or her image or voice so used, the student should raise the matter in advance with the instructor.

Examinations

Midterms

Classes that give midterm examinations outside of regular class hours must:

1. announce the date and time during the first week of the academic quarter, and
2. provide reasonable alternative times to those students who have another class or other University commitment at that time.

According to Honor Code interpretations and applications, different examinations may be given at these alternative times.

End-Quarter Policy Statement

The End-Quarter Period is a time of reduced social and extracurricular activity preceding final examinations. Its purpose is to permit students to concentrate on academic work and to prepare for final examinations.

In Autumn, Winter, and Spring quarters, End-Quarter starts seven full days (to begin at 12:01 a.m.) prior to the first day of final exams. In Spring Quarter, final examinations begin on Friday; no classes are held on Thursday, the day before. In Summer Quarter, this consists of the weekend and the four class days preceding the final examinations, which take place on Friday and Saturday of the eighth week. (See the Time Schedule for dates.)

During the End-Quarter Period, classes are regularly scheduled and assignments made; this regular class time is used by instructors in whatever way seems best suited to the completion and summation of course material. Instructors should neither make extraordinary assignments nor announce additional course meetings in order to “catch up” in course presentations that have fallen behind. They are free, however, and even encouraged to conduct optional review sessions and to suggest other activities that might seem appropriate for students preparing for final examinations.

No graded homework assignments, mandatory quizzes, or examinations should be given during the End-Quarter Period except:

1. In classes where graded homework assignments or quizzes are routine parts of the instruction process.
2. In classes with laboratories where the final examination will not test the laboratory component. In such a case, the laboratory session(s) during the End-Quarter Period may be used to examine students on that aspect of the course.
Major papers or projects about which the student has had reasonable notice may be called due in the End-Quarter Period.

Take-home final examinations, given in place of the officially scheduled in-class examination, may be distributed in the End-Quarter Period. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course. Such a policy respects the principle that students’ final examinations are to be scheduled over a period of several days.

End-quarter examinations may not be held during this period. This policy preserves the instruction time for courses and protects the students’ opportunities for extensive review and synthesis of their courses.

During the End-Quarter Period, no musical, dramatic, or athletic events involving student participation may be scheduled, unless approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP), nor may routine committee meetings be scheduled (such as those of the ASSU, the Senate of the Academic Council, or the committees of the President of the University) when such meetings normally would involve student participation.

Note—Students who believe that there are faculty who are violating End-Quarter policy should contact the Office of the University Registrar (https://remedyweb.stanford.edu/helpsu/2.0/helpsu-form?pcat=Registrar).

End-Quarter Examinations
Examinations are part of the process of education at the same time that they are a means to measure the student’s performance in course work. Their structure, content, frequency, and length are to be determined in accordance with the nature of the course and the material presented in it, subject only to the limitations contained herein.

Great flexibility is available regarding the types of examinations that an instructor may choose to employ. Examinations, including final examinations, may be, for example, in-class essay examinations, take-home essay examinations, objective examinations, oral examinations, or appropriate substitutes such as papers or projects. Instructors may use any type of examination, paper, or project, or any combination thereof, guided only by the appropriateness of the types of examinations, papers, or projects for the material upon which the student is being examined.

When the final examination is an in-class examination, the following regulations apply:

1. A three-hour period is reserved during examination week for the final examination in each course of more than 2 units. This examination period must be available for students, but not necessarily in its entirety, if an in-class examination is given. In courses with extraordinary meeting times, such that ambiguity might exist as regards the period reserved for the final examination, the schedule should be clarified and students informed no later than the end of the second week of the quarter.

2. Examinations in 1- or 2-unit courses must be completed by the end of the last class meeting before the End-Quarter Period, except in Summer Quarter when examinations must be completed during the last regularly scheduled class session.

When the final examination or its appropriate substitute is not an in-class examination (for example, when an instructor chooses to employ a take-home examination, paper, or project in lieu of an in-class examination), the following regulations apply:

1. The schedule and format of the final examination or its appropriate substitute are made known not later than the end of the second week of the quarter and, if changed subsequently, may be only an option of the plan originally announced by the instructor.

2. Although the instructor may ask students to return take-home examinations early in the final examination period, the instructor may not call them due until the end of the regularly scheduled examination time for that course.

In submitting official Study Lists, students commit to all course requirements, including the examination procedures chosen and announced by the course instructor. In choosing courses, students should take cognizance of the official schedule of final examinations announced on the Registrar’s (http://studentaffairs.stanford.edu/registrar/final-exams) website. Students anticipating conflicts in final examination schedules should seek to resolve these with the instructors involved before the Preliminary Study List deadline at the beginning of the quarter. If accommodation cannot be made at that time, the student should revise his or her Study List before the Final Study List deadline at the end of the third week of the quarter in order to be able to meet the required final examination.

If unforeseen circumstances prevent the student from sitting for the regularly scheduled examination, instructors should make alternative arrangements on an individual basis. Such unforeseen circumstances include illness, personal emergency, or the student’s required participation in special events (for example, athletic championships) approved as exceptions by the Committee on Undergraduate Standards and Policy (C-USP). Inquiries regarding these circumstances may be directed to the office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR) (https://undergrad.stanford.edu/advising/make-appointment), Sweeney Hall.

Statement Concerning Early Examinations
Students are reminded that taking final examinations earlier than the scheduled time is a privilege, not a right. They should request this privilege only in the event of extraordinary circumstances.

Since the final examination schedule for each quarter (http://studentaffairs.stanford.edu/registrar/final-exams) is published annually on the Registrar’s website at the time of course selection and enrollment, students are expected to make their academic plans in light of known personal circumstances that may make certain examination times difficult for them.

In general, faculty members are discouraged from giving final examinations earlier than the published and announced times. If faculty nevertheless decide to administer early examinations, either the questions should be completely different from those on the regularly scheduled examination or the early examination should be administered in a highly controlled setting. An example of such a setting would be a campus seminar room where the examination questions would be collected along with students’ work and students would be reminded of their Honor Code (http://www.stanford.edu/dept/registrar/bulletin/79155.htm) obligations not to share information about the examination contents. Giving students easy opportunities to abuse the integrity of an examination is unfair to honest students and inconsistent with the spirit of the Honor Code (http://www.stanford.edu/dept/registrar/bulletin/79155.htm).

Academic fields differ in the degree to which early examination requests present dilemmas for faculty. If, for example, an examination format consists of a small number of essay questions, where students would be greatly advantaged by knowing the question topics, faculty should be especially reluctant to allow early examinations unless they are willing to offer totally different examinations or a different kind of academic task, for example, a final paper in lieu of an examination.
Grading Systems

General University Grading Systems

The general University grading system is applicable to all of Stanford University except the Graduate School of Business, the School of Law, and M.D. students in the School of Medicine. Note that the GPA (grade point average) and rank in class are not computed under the general University grading system. Stanford does use an internal-only GPA which is based on units completed up to the time of conferral of the first bachelor’s degree. This information is used for internal purposes only (including academic progress) and is not displayed on the official transcript which is sent outside the University. Most courses are graded according to the general University grading system. However, courses offered through Law, Business, and Medicine are graded according to those schools’ grading systems, even in cases where students in other programs are enrolled in their classes. Note also that, as to graduate students, there may be departmental requirements as to grades that must be maintained for purposes of minimum academic progress.

Definition and Explanation of Grading Systems

All grades/notations for courses taken in 1995-96 or later are to be visible on student transcripts. Effective Summer Quarter 2008-09, the notation * was changed to GNR (Grade Not Reported).

</table>

Explanation of Grade

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>NC</td>
<td>The notation ‘NC’ represents unsatisfactory performance in courses taken on a satisfactory/no credit basis. Performance is equivalent to letter grade ‘D+’ or below.</td>
</tr>
<tr>
<td>NP</td>
<td>The notation ‘NP’ is used by instructors in courses taken for a letter grade that are not passed.</td>
</tr>
<tr>
<td>CR</td>
<td>In a course for which some students receive letter grades, the ‘CR’ represents performance that is satisfactory or better when the student has elected the ‘CR’ grading option.</td>
</tr>
<tr>
<td>S</td>
<td>For an activity course or a course in which the instructor elects to grade students only on a satisfactory/no credit basis, the ‘S’ represents performance that is satisfactory or better. For such a course, no letter grades may be assigned for satisfactorily completed work. It should be noted that the Registrar is unable to record course grades submitted when the instructor has not observed the required distinction between ‘S’ and ‘CR.’ The ‘satisfactory’ options are intended to relieve the pressure on students for achievement in grades. The ‘satisfactory’ options in no way imply fewer or different course work requirements than those required of students who elect evaluation with a letter grade. A department may limit the number of ‘satisfactory’ courses to count for a major program. No more than 36 units of Stanford course work (including activity courses) in which a ‘CR’ or ‘S’ was awarded can be applied toward the 180 (225 if dual degrees are being pursued) units required for a bachelor’s degree. Transfer students are limited to 27 ‘CR’ or ‘S’ units applied to the 180/225 minimum.</td>
</tr>
<tr>
<td>L</td>
<td>The ‘L’ is a temporary notation that represents creditable completion of a course for which the student will receive a permanent letter grade before the start of the next quarter. The ‘L’ is given when the instructor needs additional time to determine the specific grade to be recorded, but it is not appropriate if additional work is expected to be submitted by the student. A student receives unit credit for work graded ‘L.’</td>
</tr>
<tr>
<td>N</td>
<td>The ‘N’ indicates satisfactory progress in a course that has not yet reached completion. Continuation courses need not continue at the same number of units, but the grade for all quarters of such a course must be the same.</td>
</tr>
<tr>
<td>N-</td>
<td>The ‘N-’ grade indicates unsatisfactory progress in a continuing course. The first ‘N’- grade constitutes a warning. The adviser, department chair, and student should discuss the deficiencies and agree on the steps necessary to correct them. A second consecutive ‘N-’ will normally cause the department to deny the student further registration until a written plan for the completion of the degree requirements has been submitted by the student and accepted by the department. Subsequent ‘N’- grades are grounds for dismissal from the program.</td>
</tr>
<tr>
<td>I</td>
<td>The ‘I’ is restricted to cases in which the student has satisfactorily completed a substantial part of the course work. No credit is given until the course is completed and a passing grade received. When a final grade is received, all reference to the initial ‘I’ is removed. ‘I’ grades must be changed to a permanent notation or grade within a maximum of one year. If an incomplete grade is not cleared at the end of one year, it is changed automatically by the Office of the University Registrar to an ‘NP’ (not passed) or ‘NC’ (no credit) as appropriate for the grading method of the course. Students must request an incomplete grade by the last class meeting. Faculty may determine whether to grant the request or not. Faculty are free to determine the conditions under which the incomplete is made up, including setting a deadline of less than one year (but not more than one year). A leave of absence does not stop the clock on the time limit for resolving incompletes. Graduate students with extenuating circumstances, that may warrant an exception to academic policy, should discuss the need for an extension to the time limit with their advisor and the course instructor. Students may request an extension of the deadline for resolving an incomplete by submitting the Petition to Change Course Enrollment (Graduate Students).</td>
</tr>
</tbody>
</table>

University Policies and Statements
University Policies and Statements

Revised: 12/18/14

Reporting of Grades
All grades should be reported within 96 hours after the time and day reserved for the final examination, and in no case later than noon of the fourth day (including weekends) after the last day of the final examination period. In the case of degree candidates in Spring Quarter, final grades should be reported by noon of the day following the end of the final examination period.

Revision of End-Quarter Grades
When duly filed with the Office of the University Registrar, end-quarter grades are final and not subject to change by reason of a revision of judgment on the instructor’s part; nor are grades to be revised on the basis of a second trial (for example, a new examination or additional work undertaken or completed after the end of the quarter). Changes may be made at any time to correct an actual error in computation or transcription, or where some part of the student’s work has been unintentionally overlooked; that is, if the new grade is the one that would have been entered on the original report had there been no mistake in computing and had all the pertinent data been before the instructor, the change is a proper one.

If a student questions an end-quarter grade based on the grading of part of a specific piece of work (for example, part of a test) on the basis of one of the allowable factors mentioned in the preceding paragraph (for example, an error in computation or transcription, or work unintentionally overlooked, but not matters of judgment as mentioned below), the instructor may review the entire piece of work in question (for example, the entire test) for the purpose of determining whether the end-quarter grade was a proper one. In general, changing an end-quarter grade is permitted on the basis of the allowable factors already mentioned (for example, an error in calculation and had all the pertinent data been before the instructor, the change is a proper one.

In the event that a student disputes an end-quarter grade based on the grading of part of a specific piece of work (for example, part of a test) on the basis of one of the allowable factors mentioned in the preceding paragraph (for example, an error in computation or transcription, or work unintentionally overlooked, but not matters of judgment as mentioned below), the instructor may review the entire piece of work in question (for example, the entire test) for the purpose of determining whether the end-quarter grade was a proper one. In general, changing an end-quarter grade is permitted on the basis of the allowable factors already mentioned (for example, an error in calculation and had all the pertinent data been before the instructor, the change is a proper one.

Graduate School of Business Grades
All courses offered by the Graduate School of Business are graded according to the following five-level scheme:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>H</td>
<td>Honors. Work that is of truly superior quality.</td>
</tr>
<tr>
<td>HP</td>
<td>High Pass. A passing performance, and one that falls approximately in the upper quarter of passing grades.</td>
</tr>
<tr>
<td>P</td>
<td>Pass. A passing performance that falls in the center of the distribution of all passing grades.</td>
</tr>
<tr>
<td>LP</td>
<td>Low Pass. A passing performance that falls approximately in the lower quarter of passing grades.</td>
</tr>
<tr>
<td>U</td>
<td>Unsatisfactory. A failing performance. Work that does not satisfy the basic requirements of the course and is deficient in significant ways.</td>
</tr>
<tr>
<td>GNR</td>
<td>The notation ‘GNR’ appears when no grade has been reported to the Registrar. The ‘GNR’ notation remains on the transcript until a grade has been reported (effective Autumn Quarter 2009-10).</td>
</tr>
</tbody>
</table>

GSB courses may receive grades of “+” (Pass) for courses taken on a Pass-Fail basis, with “U” denoting a failing grade, “I” for Incomplete, and “N” for a continuing grade. The grade of N is recorded in a course that spans more than a single quarter, where the grade in an earlier quarter will be determined only later, after the entire course sequence is complete.

Prior to 2009-10, an asterisk (*) notation was placed when no grade was reported.

For more information, see the GSB Grades web site (p. 70).

Stanford Law School Grades
Effective Autumn Quarter 2009-10, units earned in the Stanford Law School are quarter units. Units earned in the Stanford Law School prior to 2009-10 were semester units. The following grading system became effective in Autumn Semester 2008-09. J.D. students who graduated in 2009 remained on the prior grading system but all other students shifted to the new grading system. For more information, see the Stanford Law School Handbook (http://www.law.stanford.edu/experience/studentlife/SLS_Student_Handbook.pdf).

<table>
<thead>
<tr>

</tr>
<tr>
<td>GNR</td>
<td>Grade not reported (effective Autumn Quarter 2009-10).</td>
</tr>
</tbody>
</table>

The grading systems employed at the Stanford Law School September 2001 through Spring 2009 were as follows. Under the numerical system (with letter equivalents), the range of satisfactory grades ran from 4.3 to 2.5 as outlined in the following distribution. Below the grade of 2.5 was one level of restricted credit (2.2) and one level of failure (2.1). The number grades with letter equivalents were as follows:

- H: Honors
- HP: High Pass
- P: Pass
- LP: Low Pass
- U: Unsatisfactory
- GNR: Grade Not Reported
On this old system, students could elect to take a limited number of courses on a credit/restricted credit/no credit system (K/RK/NK). 'K' was awarded for work that was comparable to numerical grades 4.3 to 2.5, 'RK' for Restricted Credit-level work (2.2), and 'NK' for Failure-level work (2.1). A limited number of courses were offered on a mandatory credit (KM)/no credit (NK) basis.

'N' is a temporary notation used in a continuing course; it is replaced with a final grade upon completion of the course series.

School of Medicine Grades
In general, the following grades are used in reporting on the performance of students in the M.D. program:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pass (+)</td>
<td>Indicates that the student has demonstrated to the satisfaction of the department or teaching group responsible for the course that the student has mastered the material taught in the course.</td>
</tr>
<tr>
<td>Fail (-)</td>
<td>Indicates that the student has not demonstrated to the satisfaction of the department or teaching group responsible for the course that the student has mastered the material taught in the course.</td>
</tr>
<tr>
<td>Incomplete (I)</td>
<td>Indicates that extenuating medical or personal circumstances have prevented the student from completing the course requirements. This grade is given when requested by the student with the prior approval of an Advising Dean in the School of Medicine.</td>
</tr>
<tr>
<td>Continuing (N)</td>
<td>Indicates that the course has not concluded and the student is continuing the course.</td>
</tr>
<tr>
<td>Exempt (Ex)</td>
<td>Indicates a course that is exempted by examination. No units are awarded.</td>
</tr>
<tr>
<td>GNR</td>
<td>The notation 'GNR' appears when no grade has been reported to the Registrar. The 'GNR' notation remains on the transcript until a grade has been reported (effective Autumn Quarter 2009-10).</td>
</tr>
</tbody>
</table>

In general, a 'Fail' grade can be cleared by repeating and passing the particular course or by other arrangement prescribed by the department or teaching group. An 'Incomplete' grade can be made up in a manner specified by the department or teaching group within a reasonable time; if the deficiency is not made up within the specified time, the 'Incomplete' grade becomes a 'Fail' grade. The opportunity to clear a 'Fail' grade or an 'Incomplete' grade cannot be extended to individuals who are not registered or eligible to register as students in the M.D. program. For more specific information, see the Assessment of Student Academic Performance (http://med.stanford.edu/md/curriculum/assessment-grading.html) web site.

Certification of Enrollment or Degrees
The Office of the University Registrar can provide written confirmation of registration, enrollment, or degree status upon request by the student. The printed certification can be used whenever enrollment or degree verification is required for car insurance, loan deferments, medical coverage, scholarship purposes, and so on. Using Axess, students are able to print an official certification at no charge. Certification of full- or part-time enrollment cannot be provided until after the study list is filed for the quarter in question.

Degrees are conferred quarterly, but diplomas are issued in accordance to the distribution dates listed on the Registrar’s Office (http://studentaffairs.stanford.edu/Registrar/Students/Diplomas) web site. After conferral, the degree awarded to a student can be verified by contacting the Office of the University Registrar for an official transcript, or official degree certification form. Requests for transcripts or degree certifications must be made by the student in writing or through Axess.

Stanford University has authorized the National Student Clearinghouse (NSC) to act as its agent for purposes of third party enrollment and degree verification. The NSC will be able to verify degrees and enrollment for only those students who have not placed a privacy block on their academic record. The student’s name when enrolled, Social Security Number or Student ID, and date of birth will be required for identification purposes and enrollment or degree verification. All third parties should contact the National Student Clearinghouse by phone or visit their web site for current enrollment and degree verification information, instructions, and fees.

As a general proposition, full-time enrollment for undergraduates is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time status in the current quarter. Enrollment in 8 to 11 units is considered half-time enrollment. Enrollment in 1 to 7 units is considered less-than-half-time, or part-time enrollment. During Summer Quarter, all graduate students who hold appointments as research or teaching assistants are considered to be enrolled on at least a half-time basis.

For students with disabilities taking a reduced course load, contact the Office of Accessible Education (http://studentaffairs.stanford.edu/oae) for additional information.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification.

Stanford uses the following definitions (in units) to certify the enrollment status of graduate and professional students each quarter:

<table>
<thead>
<tr>
<th>Status</th>
<th>Graduate (M.B.A./Sloan)</th>
<th>Business (M.B.A./Sloan)</th>
<th>Law</th>
<th>Medicine (M.D.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Full time: 8 or more</td>
<td>11 or more</td>
<td>9 or more</td>
<td>9 or more</td>
<td></td>
</tr>
<tr>
<td>Half time: 6 or 7</td>
<td>6-10</td>
<td>6-8</td>
<td>6-8</td>
<td></td>
</tr>
<tr>
<td>Part time: 5 or fewer</td>
<td>5 or fewer</td>
<td>5 or fewer</td>
<td>5 or fewer</td>
<td></td>
</tr>
</tbody>
</table>

TGR students enrolled in a course numbered 801 or 802 are certified as full time. Graduate students on an approved Graduation Quarter status are certified as full time.

As a general proposition, only information classified by the University as directory information (see the "Directory Information (p. )" section of this bulletin) can be confirmed to inquirers other than the student.
H-1B Degree Certification

As the H-1B application deadline is April 1 and Winter Quarter degree conferral does not occur until after this date (or just before), the Office of the University Registrar provides an H-1B Degree Certification Letter for eligible students graduating Winter Quarter who are applying for the H-1B visa and have completed all school/department and University degree requirements.

Students conferring degrees in all terms except Winter Quarter should request an official transcript in their student Axess account after the degree conferral date of their graduation term. The official transcript indicates the results of all work completed and degrees awarded. Students can also request an official degree certification via Axess, or by completing a Degree Certification Request form. See Certifications and Verifications (http://studentaffairs.stanford.edu/registrar/students/ certifications) for details on requesting degree verification.

An Enrollment Verification is included with the H-1B Degree Certification Letter. The Enrollment Certification states a student’s enrollment history, current program of study, major, expected degree, and expected degree conferral date. This document bears the University seal and signature of the University Registrar. For more information see the Office of the University Registrar H-1B Certification Letter (http://exploredegrees.stanford.edu/academicpoliciesandstatements/x-webdoc/D3A5CCDC-66E3-45EE-B78-2D47E9234AF2/ studentaffairs.stanford.edu/registrar/students/h-1b) web site.

Bechtel International Center organizes H-1B workshops which students are encouraged to attend if they have any questions regarding H-1B issues.

Posthumous Degrees

Stanford will consider granting a posthumous degree in instances in which a student was in good standing and had completed at least 90% of all graduation requirements at the time of death. Requests must be approved by the chair of the major department or the dean of a professional school and the University Registrar. Requests should be addressed to the University Registrar and generally should take place within 12 months of the student’s death.

Academic Progress

Undergraduates must maintain a minimum 2.0 cumulative GPA and a quantitative unit requirement for satisfactory academic progress. In addition, a minimum 2.0 cumulative GPA is required for conferral of a baccalaureate degree.

Undergraduates normally are expected to plan their academic programs so that they can complete 180 units in four years (twelve quarters), including the requirements for a major and the General Education (p. 33) (Ways/GERs), Writing and Rhetoric (p. ), and Language (p. ) Requirements. Satisfactory academic progress is, on average, 45 units per academic year for four years leading to at least 180 units, a cumulative grade point average of at least 2.0, and a baccalaureate degree.

While undergraduates are expected to register for a minimum of 12 units, they are required to earn at least 9 units each quarter (by the end of the final exam period) and at least 36 units in their most recent three quarters of Stanford enrollment (by the end of the third final exam period). In addition, students are expected to maintain a cumulative grade point average of at least 2.0. Transfer work completed at other institutions is not considered in this calculation.

A student earning fewer than 9 units per quarter or fewer than 36 units in three quarters, or earning less than a 2.0 cumulative grade point average, is placed on probation. (For students with disabilities taking a reduced course load, contact the Office of Accessible Education (http://studentaffairs.stanford.edu/oaed) for additional information.) Additionally, a student may be placed directly on provisional registration or suspension (both further defined in this section) without first being placed on probation if the student had a prior probation status. Students on probation (p. ) or provisional registration (p. ) status are required to earn a minimum of 12 units of new course work per quarter (by the end of the final quarter examination period for each quarter) in each quarter for three quarters of consecutive enrollment (excluding Summer), and achieve and maintain a cumulative grade point average of at least 2.0 to attain a satisfactory academic progress status. The C-USP Subcommittee on Academic Progress may stipulate otherwise by acting upon a request for fewer units (i.e. reduced course load).

A Stanford Summer Session quarter may count (upon request) toward the three quarter consecutive enrollment requirement if 11 or more units are earned.

Full-time enrollment is considered to be enrollment in a minimum of 12 units of course work per quarter at Stanford. Under extenuating circumstances, students may submit a request to the C-USP Subcommittee on Academic Progress to take fewer units. As a general proposition, work necessary to complete units from previous quarters does not count toward the 12 units necessary for full-time enrollment in the current quarter. All students registering for fewer than 12 units should consider the effects of that registration on their degree progress, visas, residency requirements, varsity athlete status, and their eligibility for financial aid and awards as well as eligibility for or deferment of student loans.

All undergraduates validly registered at Stanford are considered to be in good standing for the purposes of enrollment certification and athletic participation.

Units are granted for courses completed with grades ‘A,’ ‘B,’ ‘C,’ ‘D,’ ‘Satisfactory’ (‘CR’ or ‘S’), and ‘L.’ Courses graded ‘N’ are counted provisionally as units earned, provided the student enrolls in the continuing segment of that course the following quarter. When the course is completed satisfactorily, the student receives the units for which he or she enrolled. No units are granted for a course in which the student receives an ‘F’ or a ‘GNR’ (GNR replaced the ‘ ’ effective Autumn Quarter 2009-10) until the course is completed satisfactorily and the final grade reported. No units are granted for a course in which the student receives a ‘W.’ (See the “Grading Systems (p. 70)” section of this bulletin).

Students who receive all ‘W’s as the result of a Leave of Absence (either voluntary or involuntary) are subject to Academic Progress policies.

The C-USP Subcommittee on Academic Progress, in its discretion, is empowered to place conditions on students with an academic progress status (e.g., probation, provisional registration, etc.) with regard to enrollment and participation in programs and activities. In addition, students on probation require approval in advance from Undergraduate Advising and Research (https://undergrad.stanford.edu/advising/make- appointment), Residential Education (http://studentaffairs.stanford.edu/resed), and the Overseas Studies Program (http://bosp.stanford.edu) or Stanford in Washington Program (http://siw.stanford.edu) office or Stanford in New York (p. 129) or Stanford at Sea (http://stanford.sea.edu) in order to participate in Stanford’s Overseas Studies Program or Stanford in New York or Stanford at Sea; while students on other statuses (e.g., provisional registration, etc.) are ineligible to participate in these programs.

Degree Progress standards for coterminal students are described in the coterminal bachelor’s and master’s degrees section of the Bulletin.

Students receiving federal student aid funds must maintain satisfactory academic progress standards that may be stricter than those outlined here. See the Financial Aid Office web site (http://financialaid.stanford.edu) for details.
Probation
A student who fails to earn at least 36 units of work (by the end of the third final exam period) in his or her most recent three quarters of enrollment at the University (excluding Summer), or who fails to earn by the end of the final examination period at least 9 quarter units of work in his or her most recent quarter of enrollment at the University (excluding Summer), or who has a cumulative grade point average of less than 2.0, may be placed on probation.

A student shall be removed from probation if, in each of three subsequent quarters of consecutive enrollment at the University (excluding Summer), he or she earns a minimum of 12 units of new course work by the end of the final examination period and achieves and maintains a cumulative grade point average of at least 2.0. A student may also be removed from probation at the discretion of the C-USP Subcommittee on Academic Progress or its designees as a result of a review of individual records.

Provisional Registration
A student who, while on probation, fails in any quarter of registration (excluding Summer) to earn a minimum of 12 units of new course work by the end of the final examination period or fails to achieve and maintain a cumulative grade point average of at least 2.0, may be placed on provisional registration status. In addition, and on occasion, a student may also be placed directly on provisional registration without first being placed on probation if the student has had a prior probation status.

A student shall be removed from provisional registration if, in each of three subsequent quarters of enrollment at the University (excluding summer), he or she earns a minimum of 12 units of new course work by the end of the final examination period and achieves and maintains a cumulative grade point average of at least 2.0. A student may also be removed from provisional registration at the discretion of the C-USP Subcommittee on Academic Progress or its designees as a result of a review of individual records.

Suspension
A student who, while on provisional registration, fails in any quarter of registration (excluding Summer) to earn a minimum of 12 units of new course work by the end of the final examination period or fails to achieve and maintain a cumulative grade point average of at least 2.0, may be suspended. In addition, and on occasion, a student may also be suspended directly from probation; or may be suspended without first being placed on probation or provisional registration if the student has had a prior probation status.

While students suspended for the first time are suspended for one year, students suspended a subsequent time may be suspended for up to three years.

Students suspended for one year are not eligible to enroll for four quarters (including Summer Quarter) following the quarter in which the suspension was issued. Students suspended for up to three years are not eligible to enroll for up to twelve quarters (including Summer Quarter) following the quarter in which the suspension was issued.

As well, until re-enrollment, students who are suspended are ineligible for the privileges associated with registration, privileges that include living in University housing, participating in voluntary student organizations, and involvement in any activity for which enrollment is a requirement.

The C-USP Subcommittee on Academic Progress or its designees, in its discretion, may impose conditions of the suspension, and/or to a return from the suspension.

Reconsideration of Academic Suspension
Students who receive an academic suspension and believe they have information that presents relevant and compelling material previously unknown to the subcommittee or its designees, such that reconsideration for immediate continuation of their studies without a break in enrollment is suitable, should meet with an adviser from the office of Undergraduate Advising and Research (UAR) in VPUE to discuss their circumstances. Students with such relevant circumstances may submit a Request for Reconsideration of Academic Suspension. Granting such requests is at the discretion of the subcommittee or its designees, and may be based on factors or considerations regarded as relevant including the demonstrated or perceived likelihood for immediate academic success. Requests for reconsideration submitted after the deadline are not accepted. A student may also grieve an academic suspension under the Student Academic Grievance Procedure (p. 75).

Students are expected to complete their academic suspension in full. An academic suspension may not be substituted, in part or in whole, by a Leave of Absence.

Returning from Suspension
Students are required to submit a properly endorsed application for reinstatement to request reenrollment after the suspension period has been completed. Instructions including deadlines for requesting to return should be obtained from the Office of the Vice Provost for Undergraduate Education, via the office of Undergraduate Advising and Research (UAR), Sweet Hall. The C-USP Subcommittee on Academic Progress, or those designated by the subcommittee, acts upon all requests concerning academic progress and its statuses, including requests to return after academic suspension. The subcommittee or its designees may determine whether the application for reinstatement to return will be approved or not, and/or the conditions a student must meet in order to return. Request to return decisions are at the discretion of the University and may be based on activities while away from campus, the perceived potential for successful completion of the program, as well as any other factors or considerations regarded as relevant to the Vice Provost for Undergraduate Education or the subcommittee or its designees.

Students who return from an academic suspension are given the academic progress status “provisional registration”, and must adhere to and comply with the policies above and elsewhere related to that status upon their return. Questions concerning academic progress or requests to return should be directed to the office of Undergraduate Advising and Research (UAR), Sweet Hall.

Students returning from suspension should also contact appropriate campus offices, such as Housing and Financial Aid, regarding those deadlines and procedures.

Notification (Academic Progress)
Written notification that a student is on probation, provisional registration, or suspension is sent to the student, to the student’s academic adviser(s), and to other relevant university offices and individuals as soon as possible after the close of the quarter. Students also receive written notification of the outcome of their Request for Reconsideration of Academic Suspension or request to return after suspension. Current student status, such as whether a student is enrolled or not, is considered Directory Information for FERPA purposes at Stanford, and Stanford may provide either parent(s) or guardian(s) written notification of a change in student status. Provided that a student consents, or the student is a dependent for income tax purposes, Stanford may also provide either parent(s) or guardian(s) written notification that the student is on probation, provisional registration, suspension, or leave of absence (either voluntary or involuntary). Other FERPA exceptions may also apply.

Student Academic Grievance Procedure
The following policy is subject to periodic review and modification.

1. Coverage
a. Any Stanford undergraduate or graduate student who believes that he or she has been subjected to an improper decision on an academic matter is entitled to file a grievance to obtain an independent review of the allegedly improper decision, followed by corrective action if appropriate. A grievance is a complaint in writing made to an administrative officer of the University concerning an academic decision, made by a person or group of persons acting in an official University capacity, that directly and adversely affects the student as an individual in his or her academic capacity.

b. This grievance procedure applies only in those cases involving a perceived academic impropriety arising from a decision taken by: (1) an individual instructor or researcher; (2) a school, department, or program; (3) a committee charged to administer academic policies of a particular school, department, or program; or (4) the University Registrar, the Vice Provost for Undergraduate Education, the C-USP Subcommittee on Academic Progress, or a Senate committee or subcommittee charged to administer academic policies of the Senate of the Academic Council. This procedure does not apply to: (1) complaints expressing dissatisfaction with a University policy of general application challenged on the grounds that the policy is unfair or inadvisable; (2) individual school, department, or program academic policies, as long as those policies are not inconsistent with general University policy; (3) matters proceeding or addressed through the Office of Community Standards; or (4) involuntary leave decisions.

c. Individuals should be aware that the University Ombuds Office is available to all Stanford students, faculty, and staff to discuss and advise on any matter of University concern and frequently helps expedite resolution of such matters. Although it has no decision-making authority, the University Ombuds Office has wide powers of inquiry, including into student complaints against instructors.

2. Grievance and Appeal Procedures

a. Informal Attempts at Resolution: the student first should discuss the matter, orally or in writing, with the individual(s) most directly responsible. If no resolution results, the student should then consult with the individual at the next administrative level, for example, the chair or director of the relevant department or program, or, for those cases in which there is none, with the school dean. At this stage, the department chair or program director, if any, may inform the dean that the consultation is taking place and may solicit his or her advice on how to ensure that adequate steps are taken to achieve a fair result. Efforts should be made to resolve the issues at an informal level without the complaint escalating to the status of a formal grievance.

b. The Filing of the Grievance:
   i. If informal means of resolution prove unsatisfactory, the student should set forth in writing a statement of the decision that constitutes the subject matter of the dispute, the grounds on which it is being challenged, and the reasons why the grievant believes that the decision was improperly taken. The statement should also include a description of the remedy sought and the informal efforts taken to date to resolve the matter. It is at this point that the complaint becomes a formal grievance. The written grievance should specifically address the matters set forth in the Standards for Review, as stated in Section 3 below. A grievance must be filed in a timely fashion, that is, no later than 30 days after the end of the academic quarter in which the adverse decision occurred or should reasonably have been discovered. Except in extraordinary circumstances, delay in filing a grievance will constitute grounds for rejection of the grievance.

   c. The Response to the Grievance:
      i. The relevant dean will consider the grievance. The dean may attempt to resolve the matter informally or make whatever disposition of the grievance that he or she deems appropriate. The dean may, in appropriate cases, remand the grievance to a lower administrative level (including to the level at which the grievance arose) for further consideration.

      ii. The dean may also refer the grievance, or any issue therein, to any person (the "grievance officer") who will consider the matter and report to the dean as the latter directs. The dean will inform the grievant (and the party against whose decision the grievance has been filed) in writing of any referral of the matter and will specify the matters referred, the directions to the person or persons to whom the referral is made (including the time frame within which the person is to report back to the dean), and the name of that person.

      iii. In undertaking the review, the dean or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information considered relevant, including faculty, staff, and students.

   iv. Should attempts to resolve the matter informally not be successful, the dean will decide the grievance, and will notify the grievant (and the party against whose decision the grievance has been filed) in writing of the disposition made of the grievance and the grounds for the disposition at the earliest practicable date after his or her receipt of the grievance.

   v. Normally, no more than 60 days should elapse between the filing of a grievance and the disposition by the dean. If, because of absence of key persons from the campus or other circumstances or exigencies (including those due to breaks in the academic calendar), the dean decides that disposition on that schedule is not possible, he or she shall inform the grievant (and the party against whose decision the grievance has been filed) of that in writing, giving the grounds therefore and an estimate of when a disposition can be expected. During summers and the winter closure, this time frame will nearly always be extended.

d. The Filing of an Appeal:
   i. If the grievant is dissatisfied with the disposition of the grievance at the decanal level, either on substantive or on procedural grounds, he or she may appeal in writing to the Provost.

   ii. The appeal must specify the particular substantive or procedural bases of the appeal (that is, the appeal must be made on grounds other than general dissatisfaction with the disposition) and must be directed only to issues raised in the grievance as filed or to procedural errors in the grievance process itself, and not to new issues. The appeal must contain the following:
      1. A copy of the original grievance and any other documents submitted by the grievant in connection therewith.
      2. A copy of the determination made by the dean on that grievance.
      3. A statement of why the reasons for the determination of the dean are not satisfactory to the grievant. This statement should specifically address the matters set forth in the Standards for Review in Section 4 below.
3. Grievances Concerning Decisions of the University Registrar, the Vice Subcommittee

a. For a grievance concerning a decision of the University Registrar, or of a Senate Committee or Subcommittee, the Vice Provost for Undergraduate Education, or of a Senate Committee or Subcommittee, the grievant will file his or her grievance with the Provost, rather than with the dean, and the Provost will handle that grievance in accordance with the procedures set forth in Section 2c above.

b. There is no appeal of the Provost’s disposition of that grievance, except as may be available under Section 2f above.

4. Standards for Review and Procedural Matters

a. The review of grievances or appeals will usually be limited to the following considerations:

i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

b. The time frames set forth herein are guidelines. They may be extended by the relevant administrative officer in his or her discretion for good cause.

c. Questions concerning the filing and appeal of grievances should be directed to the Office of the Provost.

Stanford University ID Number

The Stanford University ID Number is assigned to each student’s academic record for unique identification. It is printed on the Stanford University ID card and on documents distributed by the Office of the University Registrar and other administrative offices. It is a violation of University policy to use another’s Stanford University ID Number to misrepresent yourself in any way; such use can result in loss of student privileges or other disciplinary action.

SUNet ID

The SUNet ID provides access to the Stanford University Network (SUNet) and its services, and identifies authorized users of these services. Each member of the Stanford electronic community creates a unique SUNet ID and SUNet ID password for him/herself. SUNet IDs provide:

- Access services
- Email service
- Storage space within Stanford’s distributed file system
- Usenet newsgroups
- World wide web services, including serving of personal web pages on the Leland system and access to Stanford Web Resources

The SUNet ID together with SUNet ID password may serve in place of a signature on electronic forms. The SUNet ID password must remain confidential; it is a violation of University policy to permit another person to use your SUNet ID or password. It is a violation of University policy to use another’s SUNet ID or SUNet ID password to misrepresent yourself in any way; such use can result in loss of student privileges or other disciplinary action.

Identification Cards

The ID card serves as an identification card, an electronic key, and a debit card, allowing cardholders to use services for which they have privileges, to enter certain facilities, and to make purchases.

ID cards are available to registered students, faculty, academic staff, and regular staff. Students obtain their ID cards at the Student Services Center, Tresidder Union, 459 Lagunita Drive, 2nd Floor (650) 498-CARD). Faculty and staff obtain ID cards at George Forsythe Hall, 275 Panama Street, Room 190 (650-498-CARD).

Courtesy ID cards are available for spouses and domestic partners of the Stanford professoriate, academic staff, regular staff, and students. These
cards may be obtained from the Stanford Card ID Office at Forsythe Hall. The spouse/partner courtesy ID card enables use of some campus services during terms for which the student is registered.

Visiting Scholars who are on campus for a minimum of one quarter and contribute to Stanford’s mission by teaching or collaborating on Stanford research also receive ID cards and campus privileges during their stay on campus. These cards may be obtained from the Stanford Card ID Office at Forsythe Hall.

Library access and borrowing privileges are reserved for the Stanford professoriate, academic staff, regular staff, students, and others associated with the University with a need for such access.

ID cards bear a photograph of the cardholder. This photograph is maintained in an online database and, as stated in the “Directory Information (p. ____)” section of this bulletin, is available for classroom, student residence, and other use upon specific request and without student consent unless the student has designated that the photograph not be released. Photographs can be designated as private using the Privacy function of Axess.

Misuse of the ID card may result in discipline or administrative action.

For more information, see the Campus Card Service (http://campuscard.stanford.edu) web site. For the complete policy on Stanford Identification Cards, see the Administrative Guide, 28-4 (http://adminguide.stanford.edu/28_4.pdf) (pdf).

Auditing

No person shall attend any class unless he or she is a fully registered student enrolled in the course or meets the criteria for auditors. Auditors are not permitted in courses that involve direct participation such as language or laboratory science courses, field work, art courses with studio work, or other types of individualized instruction (i.e., labs, seminars, case study, language, and activity courses are not permitted). Auditors are expected to be observers rather than active participants in the courses they attend, unless the instructors request attendance on a different basis. Stanford does not confer credit for auditing, nor is a permanent record kept of courses audited. Students who have been suspended are not permitted to audit.

Auditors may not join classes for the first time after the University’s final study list deadline. Auditors are not eligible for other University services or privileges including housing, health insurance (Cardinal Care), Vaden clinical services, and the University health plan. The University Registrar reviews for approval any other services or privileges that may be sought.

The Auditor status is available to Stanford faculty or staff members for no fee. Otherwise, the Permit to Attend (https://studentaffairs.stanford.edu/registrar/students/tuition-fees_15-16) fee is assessed. The Application for Auditor or Permit to Attend (PTA) Status (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/PTA-Auditor.pdf) is required. In all cases of auditing, the instructor, department administrator, and the Office of the University Registrar’s prior approvals are required. Further information is available from the Office of the University Registrar or the Student Services Center (http://studentservicescenter.stanford.edu).
NONACADEMIC REGULATIONS

The Bulletin publishes the following nonacademic policies which are applicable to all Stanford students. Each policy is published on its own page, viewable in the left-hand menu or linked in the list below. All the policies published in the Bulletin are also collected on this page and available for download (http://exploredegrees.stanford.edu/nonacademicregulations/nonacademicregulations.pdf) (pdf).

The University reserves the right to make changes at any time without prior notice. Nonacademic policies as published on this site are the currently applicable policies.

For other policy information applicable to members of the Stanford community, see Student Activities and Leadership (https://sal.stanford.edu/policies) (student organizations, programs, and events), the "GAP (https://gap.stanford.edu)” (Graduate Academic Policies and Procedures), the Office of Special Events and Protocols (https://web.stanford.edu/dept/Events/policies) (University Event Policies), and the Administrative Guide (https://adminguide.stanford.edu) (“guidelines for non-research University activities that govern workplace interactions, approaches, procedures, and processes”).

Students with questions about nonacademic policies should submit a HelpSU ticket to the Bulletin (https://remedyweb.stanford.edu/helpsu/?pcat=ssawebsites).

Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford’s Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Stanford’s Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email).

Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this web site: https://www2.ed.gov/about/offices/list/ocr/complaintintro.html

ADA (Americans with Disabilities Act)/Section 504 Grievance Procedure (Student)

For information more generally concerning policies and procedures for students with disabilities, see the Diversity & Access Office (http://www.stanford.edu/dept/diversityaccess) web site, or the ADA/Section 504 Compliance Officer, Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email); see also the Office for Accessible Education (OAE) (http://studentaffairs.stanford.edu/oae) web site.

Policy

The following is the policy:

I. Policy

Stanford University, in compliance with state and federal laws and regulations, including the Americans with Disabilities Act of 1990 (ADA; as amended 2008) and Section 504 of the Rehabilitation Act of 1973 (Section 504), does not discriminate on the basis of disability in administration of its education-related programs and activities, and has an institutional commitment to provide equal educational opportunities for disabled students who are otherwise qualified.

Students who believe they have been subjected to unlawful discrimination on the basis of disability, or have been denied access to services or accommodations required by law, have the right to use this grievance procedure.

II. Applicability

As a general proposition, the grievance procedure set forth below is applicable to undergraduate and graduate students of the University. In general, it is designed to address disputes concerning the following:

1. Disagreements regarding a requested service, accommodation, or modification of a University practice or requirement;
2. Inaccessibility of a program or activity;
3. Harassment or discrimination on the basis of disability;
4. Violation of privacy in the context of disability.

As a general proposition, this grievance procedure supplants the Student Academic Grievance Procedure (p. 75) and the Student Non-Academic Grievance Procedure (p. ) (both of which are set forth in this
Nonacademic Regulations

Following manner:

If the procedure set forth above for informal resolution does not yield a satisfactory resolution (that is, generally within seven calendar days), the Compliance Officer will inform the student of his or her efforts and the resolution process may involve consultation with the Associate Vice Provost for Student and Academic Services and University Registrar. (The informal resolution process may involve consultation with the Associate Vice Provost for Student and Academic Services and University Registrar.)

If the Compliance Officer is not successful in quickly achieving a satisfactory resolution (that is, generally within seven calendar days), the Compliance Officer will inform the student of his or her efforts and the student’s right to file a formal complaint.

IV. Informal Resolution
Prior to initiating the formal complaint procedure set forth below, the student should, in general, first discuss the matter orally or in writing with the individual(s) most directly responsible. If no resolution results, or if direct contact is inappropriate under the circumstances, the student should then consult with the Compliance Officer at the Diversity and Access Office who will attempt to facilitate a resolution. (The informal resolution process may involve consultation with the Associate Vice Provost for Student and Academic Services and University Registrar.)

V. Formal Complaint
If the procedure set forth above for informal resolution does not yield a successful resolution, then the student may file a formal complaint in the following manner:

1. When to File Complaint: Complaints must be filed as soon as possible, but in no event later than 10 days after the end of the quarter in which the concern arose.
2. What to File: A complaint must be in writing and include the following:
   a. The grievant’s name, address, email address and phone number;
   b. A full description of the problem;
   c. A description of what efforts have been made to resolve the issue informally;
   d. A statement of the remedy requested.
3. Where to File Complaint: the complaint is to be filed with the Compliance Officer at the Diversity and Access Office, Kingscote Gardens, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).
4. Notice of Receipt: upon receipt of the complaint, the Compliance Officer reviews the complaint for timeliness and appropriateness for this grievance procedure, and provides the grievant with written notice acknowledging its receipt.
5. Investigation: the Compliance Officer will promptly initiate an investigation and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Compliance Officer directs. In undertaking the investigation, the Compliance Officer or grievance officer may conduct, consult with, and/or request a written response to the issues raised in the grievance from any individual the grievance officer believes to have relevant information, including faculty, staff, and students.
6. Representation: the grievant and the party against whom the grievance is directed each have the right to have a representative. The party shall indicate whether he or she is to be assisted by a representative and, if so, the name of that representative. For purposes of this procedure, an attorney is not an appropriate representative.
7. Findings and Notification: upon completion of the investigation, the grievance officer will prepare and transmit to the student, and to the party against whom the grievance is directed, a final report containing a summary of the investigation, written findings, and a proposed disposition. This transmission will be expected within 60 calendar days of the filing of the formal complaint. The deadline may be extended by the Compliance Officer for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The final report may also be provided, where appropriate, to any University officer whose authority will be needed to carry out the proposed disposition or to determine whether any personnel action is appropriate.
8. Final Disposition: the disposition proposed by the Compliance Officer will be put into effect promptly. The grievant or any party against whom the grievance or the proposed disposition is directed may appeal. The appeal to the Provost (as set forth below) will not suspend the implementation of the disposition proposed by the grievance officer, except in those circumstances where the Provost decides that good cause exists making the suspension of implementation appropriate.

VI. Urgent Matters
Whenever the application of any of the time deadlines or procedures set forth in this grievance procedure creates a problem due to the nature of the complaint, the urgency of the matter, or the proximity of the upcoming event, the Compliance Officer will, at the request of the grievant, determine whether an appropriate expedited procedure can be fashioned.

VII. Remedies
Possible remedies under this grievance procedure include corrective steps, actions to reverse the effects of discrimination or to end harassment, and measures to provide a reasonable accommodation or proper ongoing treatment. As stated above, a copy of the Compliance Officer’s report may, where appropriate, be sent to University officer(s) to determine whether any personnel action should be pursued.

VIII. Appeal
Within ten calendar days of the issuance of the final report, the grievant or the party against whom the grievance is directed may appeal to the Provost the grievance officer’s determination.

An appeal is taken by filing a written request for review with the Compliance Officer at the Diversity and Access Office, Kingscote Gardens, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

The written request for review must specify the particular substantive and/or procedural basis for the appeal, and must be made on grounds other than general dissatisfaction with the proposed disposition. Furthermore, the appeal must be directed only to issues raised in the formal complaint as filed or to procedural errors in the conduct of the grievance procedure itself, and not to new issues.

The Compliance Officer will forward the appeal to the Provost, and also provide copies to the other party or parties. If the grievance involves a decision that is being challenged, the review by the Provost or his or her designee usually will be limited to the following considerations:

1. Were the proper facts and criteria brought to bear on the decision?
2. Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?
2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

3. Given the proper facts, criteria, and procedures, was the decision a reasonable one?

A copy of the Provost's written decision will be expected within 30 calendar days of the filing of the appeal and will be sent to the parties, the Compliance Officer and, if appropriate, to the University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Provost for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The decision of the Provost on the appeal is final.

**Title IX of the Education Amendments of 1972**

It is the policy of Stanford University to comply with Title IX of the Education Amendment of 1972 and its regulations, which prohibit unlawful discrimination on the basis of sex. The Title IX Compliance Officer is Catherine Glaze, who has been appointed to coordinate the University’s efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title IX and its regulations should contact the Title IX Coordinator, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Grievance procedures to address complaints of discrimination on the basis of race, color, and national origin are set forth in the “Student Non-Academic Grievance Procedure (p. ).” See also Administrative Guide Memo 2.2.1 General Personnel Policies (https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-1).

**Grievances**

A Stanford undergraduate or graduate student who believes that he or she has been subject to an improper decision on an academic matter may file a grievance pursuant to the Student Academic Grievance Procedure (p. 75). For other types of grievances, students should review the section that follows on the Student Non-Academic Grievance Procedure (p. ), and consult concerning applicable procedures with the Director of the Diversity and Access Office, Kingscote Gardens, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

An individual whose matter has been substantially addressed through one of Stanford’s grievance procedures (including but not limited to the Student Academic Grievance Procedure, the Student ADA/Section 504 Grievance Procedure, the Grievance Resolution Procedure for Postdoctoral Scholars, the Student-Athlete Grievance Procedure, or the Student Non-Academic Grievance Procedure) may not raise and seek redress of the same matter under a different Stanford grievance procedure. The University retains discretion to determine when a matter has been substantially addressed.

**California Dept of Consumer Affairs Complaint Procedure**

An individual may contact the Bureau for Private Postsecondary Education for review of a complaint. The bureau may be contacted online (http://www.bppe.ca.gov) or at 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833; phone: (916) 431-6924; fax: (916) 263-1897.

**Student Non-Academic Grievance Procedure**

**Policy**

The following is the policy:

1. **Applicability**

   a. It is perhaps inevitable in any university that some students may at times feel improperly treated, and that concerns about unfairness (including potential discrimination and harassment) may also at times arise.

   In this regard (and although this grievance procedure is not limited to concerns of discrimination), Stanford University’s Nondiscrimination Policy provides in part: “Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.”

**Title VI of the Civil Rights Act of 1964**

It is the policy of Stanford University to comply with Title VI of the Civil Rights Act of 1964 and its regulations, which prohibit unlawful discrimination on the basis of race, color, and national origin. The Title VI Compliance Officer is the Director of the Diversity and Access Office, who has been appointed to coordinate the University’s efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title VI and its regulations should contact the Director of the Diversity and Access Office, Kingscote Gardens, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).
b. At Stanford, there are a number of grievance procedures through which students can raise and seek redress for what they believe to be unfair, improper or discriminatory decisions, actions, or treatment. For example:

i. If the matter involves an academic decision, the Student Academic Grievance Procedure may be the applicable procedure.

ii. If the matter involves a disability-related concern, the Student ADA/Section 504 Grievance Procedure may be applicable.

iii. If the matter involves a student-athlete and his or her sport, the Student-Athlete Grievance Procedure may be applicable.

c. The purpose of the Student Non-Academic Grievance Procedure is to provide a process for students to seek resolution of disputes and grievances that may not fall within the scope of one of the other grievance processes, including those which may arise in a student’s capacity as a student-employee.

d. As a general proposition, this procedure is available to undergraduates and graduate students at Stanford University. It is designed to address individual decisions or individual actions that affect the grievant personally in his or her capacity as a student, but it does not apply to matters proceeding or addressed through the Office of Community Standards or through the Dean’s leave policy. This is likewise not a grievance procedure to address the concerns of student groups. Similarly and as a general proposition, dissatisfaction with a departmental, school, or University policy or practice of broad or general application is not grounds for a grievance under this procedure; the Director of the Diversity and Access Office (hereafter “the Director”) may, in his or her discretion, entertain such a grievance in exceptional circumstances, such as where (for example) the policy or practice is alleged to be contrary to law. In the same way, the Director may entertain a grievance under this procedure brought by an individual who is not an undergraduate or graduate student, in an appropriate case or as required by law.

e. The Director is responsible for administering this Student Non-Academic Grievance Procedure.

i. The Director may be contacted at: Director of the Diversity and Access Office, Kingscote Gardens, 419 Laguna Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email), http://www.stanford.edu/dept/ocr.

ii. The Director in his or her sole discretion can decide whether to refer a grievance brought under this procedure to another grievance process. In cases involving allegations of sexual harassment in particular, the Director may wish to consult with the Director of the Sexual Harassment Policy Office as to the most appropriate way to proceed; see Section 5.d below. In cases involving student employment, the Director may wish to consult with the University’s Department of Human Resources.

2. Informal Resolution

a. As a general proposition (and although particular circumstances may warrant an exception), the student should first discuss the problem and seek a solution with the individual(s) most directly involved.

b. If no resolution results (or if circumstances make discussion inappropriate with the person most directly involved), the student should then consult with the individual at the next (higher) administrative level in the department, school, residence or University administrative unit. Serious efforts should be made to resolve the issue locally at an informal level without resort to a formal grievance; such efforts may continue even after the formal process is underway.

3. Formal Grievance

a. If informal means of resolution prove inadequate, the student should set forth in writing the substance of the complaint, the grounds for it and the evidence on which it is based, and the efforts taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.

b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally no later than thirty days after of the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.

c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or other designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.

e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any). Conduct meriting discipline will be brought to the attention of the appropriate disciplinary process.

4. Appeal

a. If the student is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.

b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost’s direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

5. General Provisions

a. Time Guidelines—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.

b. Advisers—A student initiating or participating in a grievance under this procedure may be accompanied by an adviser in any
The following is the policy:

Age Discrimination Act of 1975

It is the policy of Stanford University to comply with the Age Discrimination Act of 1975 and its regulations, which prohibit unlawful discrimination on the basis of age. The Age Discrimination Act Compliance Officer is the Director of the Diversity and Access Office (the Director), who has been appointed to coordinate the University’s efforts to comply with the law. Anyone who believes that Stanford is not in compliance with the Age Discrimination Act and its regulations (the Act) should contact the Director at the Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

2. Grievance Procedure

a. An individual who believes that Stanford is not acting in compliance with the Act and who wishes to file a grievance should set forth in writing the substance of his or her complaint, the grounds for it and the evidence on which it is based, and the efforts (if any) taken to date to resolve the matter. It is at this stage that the complaint becomes a formal grievance.

b. The grievance document should be submitted to the Director. A grievance should be filed in a timely fashion, i.e., normally no later than thirty days after the end of the academic quarter in which the action that is the subject of the grievance occurred. Except in extraordinary circumstances, delay in filing a grievance will be grounds for rejection of that grievance.

c. The Director will promptly initiate a review, which should normally be completed within sixty days. The Director may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance officer or designee, who will look into and/or address the matter as the Director directs. The Director may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

d. In undertaking this review, either the Director, his or her designee, or the grievance officer may request a response to the issues raised in the grievance from any individuals believed to have information the reviewer considers relevant, including faculty, staff and students.

e. The Director (or his or her designee) will issue his or her decision in writing, and take steps to initiate such corrective action as is called for (if any).

3. Appeal

a. If the grievant is dissatisfied with the disposition by the Director (or his or her designee), he or she may appeal to the Provost (Office of the President and Provost, Building 10, Stanford, CA 94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal should be filed in writing with the Provost within ten days of the issuance of the decision by the Director (or his or her designee); a delay in filing the appeal may be grounds for rejection of that appeal.

b. The Provost may attempt to resolve the matter informally, and may refer the matter (or any part of it) to a grievance appeal officer, who will review the matter at the Provost’s direction. The Provost may also, in appropriate cases, remand the matter to the appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

a. Time Guidelines—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.

b. No Retaliation—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.

c. Standards for Review—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:

   i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

   ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

   iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?
brought to bear that substantially affected the decision to the
detriment of the grievant?

ii Were there any procedural irregularities that substantially
affected the outcome of the matter to the detriment of the
grievant?

iii Given the proper facts, criteria, and procedures, was the
decision one which a person in the position of the decision
maker might reasonably have made?

Ownership and Use of Stanford Name and
Trademarks

Stanford registered marks, as well as other names, seals, logos, and
other symbols and marks that are representative of Stanford, may
be used solely with permission of Stanford. Merchandise bearing
Stanford’s names and marks, such as t-shirts, glassware, and notebooks,
must be licensed. For complete text of the currently applicable policy,
including the University officers authorized to grant permission to
use the Stanford name and marks, see Administrative Guide Memo 1.5.4 Ownership and Use of Stanford Name and Trademarks (https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-4).

Copyright

Copyright laws protect original works of authorship and give the owners
of copyrights the exclusive right to do and to authorize others to do
certain things in regard to a copyrighted work, including: make copies,
distribute the work, display or perform the work publicly, and create
derivative works. Copyright laws apply to nearly all forms of captured
content, including traditional works like books, photographs, music,
drama and sculpture. The laws also adapt to changes in technologies,
and include in their scope modern forms of works like motion pictures,
web sites, electronic media, software, multimedia works and some
databases. Registration is not required to obtain a copyright, so if in
doubt, assume a copyright applies.

Unless an exception to the copyright owner’s exclusive rights applies,
you must obtain permission from the copyright owner to copy, distribute,
display or perform a copyrighted work in any medium for any purpose. Be
especially mindful of copyright principles when using the Internet. Just
because a work is posted on the Internet does not mean that the owner of
the copyright has given you permission to use it. In general, do not post
material onto the Internet without copyright clearance.

Stanford University Libraries have licenses with many publishers, which
permit copying of materials in accordance with the educational, research
or administrative functions of the University. In addition, there are four
major exceptions to the copyright owner’s exclusive rights, which (if
applicable) permit limited use without permission. These are: the fair use
exception, the library exception, the face-to-face teaching exception, and
the distance-learning exception. For a more detailed explanation of these
exceptions, the copyright laws and Stanford’s copyright policies, please
review the University’s Copyright Reminder (http://www-sul.stanford.edu/
libraries_collections/copyright_reminders) web site. It is each person's
responsibility to be aware of and abide by copyright law; violation may
result in civil or criminal liability, and constitutes grounds for University
discipline, up to and including discharge, dismissal and expulsion.

Peer-to-Peer File Sharing

The use of file-sharing networks and software to download and share
copyrighted works like software, music, movies, television programs, and
books can violate copyright laws. Both the person who makes an illegal
copy of a copyrighted work available and the person who receives or
downloads an illegal copy have violated the law and Stanford policies.
Many file-sharing programs have default settings that share copyrighted
files, such as music and movies, through the Internet. Before enabling
any of these programs students, faculty, or staff must read the fine
print, make sure to understand the program itself, and only use such
programs lawfully. Under the Digital Millennium Copyright Act (DMCA),
copyright owners are entitled to notify Internet service providers, such
as Stanford, that IP addresses linked to the Stanford network are sharing
copies of music, movies, or other content without authorization. The law
requires the University to respond to such complaints by eliminating
access to the infringing materials. Stanford will disconnect students
who fail to respond to a DMCA complaint promptly. Furthermore, the
University also will suspend or terminate computer access to the
Stanford network, including termination of the SUNet ID, to members
of the community who continue to violate copyright laws. Finally, the
University will take action through the student, employee, or faculty
disciplinary processes if necessary. Beyond University consequences,
copyright holders may file civil lawsuits against copyright infringers
seeking extensive monetary damages. If compelled by a lawful subpoena,
Stanford may be required to identify students, faculty, staff, or others who
have violated copyright law. For more information about file-sharing, refer
to Residential Computing’s online resource, File-Sharing and Copyright
Law (http://rescomp.stanford.edu/info/dmca) web site.

Recording Lectures

Except with permission from the Office of Accessible Education (http://
studentaffairs.stanford.edu/oae) or the instructor in question, students
may not audio- or video-record lectures. Even with permission, students
may only use such recordings for personal use; no posting or further
distribution or use is permitted.

Domestic Partners

In October 1990, Stanford University adopted a domestic partners policy.
This policy, which implements the University’s nondiscrimination policy,
makes services that have historically been available to married students
available on an equal basis to students with same-sex or opposite-sex
domestic partners. These services include access to student housing,
without posing a public health risk.

Sexual Harassment and Consensual
Sexual or Romantic Relationships

For the complete text of the currently applicable version of this
policy, see Administrative Guide Memo 2.2.4 Sexual Harassment and Consensual Sexual or Romantic Relationships (https://
is also available from the Sexual Harassment Policy Office (http://
harass.stanford.edu) homepage.

Summary

Stanford University strives to provide a place of work and study free
of sexual harassment, intimidation or exploitation. Where sexual
harassment is found to have occurred, the University will act to stop
the harassment, prevent its recurrence, and discipline and/or take other
appropriate action against those responsible.

Policy

The following is quoted from the policy:

1. In General

   a. Applicability and Sanctions for Policy Violations—This policy
      applies to all students, faculty and staff of Stanford University,
      as well as to others who participate in Stanford programs
2. What Is Sexual Harassment?

Unwelcome sexual advances, requests for sexual favors, and other visual, verbal or physical conduct of a sexual nature constitute sexual harassment when:

a. It is implicitly or explicitly suggested that submission to or rejection of the conduct will be a factor in academic or employment decisions or evaluations, or permission to participate in a University activity; or

b. The conduct has the purpose or effect of unreasonably interfering with an individual’s academic or work performance or creating an intimidating or hostile academic, work or student living environment.

Determining what constitutes sexual harassment depends upon the specific facts and the context in which the conduct occurs.

Sexual harassment may take many forms—subtle and indirect, or blatant and overt. For example,

i. It may be conduct toward an individual of the opposite sex or the same sex.

ii. It may occur between peers or between individuals in a hierarchical relationship.

iii. It may be aimed at coercing an individual to participate in an unwanted sexual relationship or it may have the effect of causing an individual to change behavior or work performance.

iv. It may consist of repeated actions or may even arise from a single incident if sufficiently egregious.

c. The University’s Policy on Sexual Assault (see Guide Memo 23.3, Sexual Assault (http://adminguide.stanford.edu/23_3.pdf)) may also apply when sexual harassment involves physical contact.

3. What To Do About Sexual Harassment

Individuals seeking further information are directed to the following resources:

- The Sexual Harassment Policy Office (Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu for information, consultation, advice, or to lodge a complaint. Note that anonymous inquiries can be made to the SHPO by phone during business hours.

- Any designated Sexual Harassment Adviser or resource person listed in 3.a or 5.a.

The following are the primary methods for dealing with sexual harassment at Stanford. They are not required to be followed in any specific order. However, early informal methods are often effective in correcting questionable behavior.

a. Consultation—Consultation about sexual harassment is available from the Sexual Harassment Policy Office, Sexual Harassment Advisers (including residence deans), human resources officers, employee relations specialists, counselors at Counseling and Psychological Services (CAPS) or the Help Center, chaplains at Memorial Church, ombudspersons and others. A current list of Sexual Harassment Advisers is available from the Sexual Harassment Policy Office and at http://harass.stanford.edu/SHAdvisers.html. Consultation is available for anyone who wants to discuss issues related to sexual harassment, whether or not "harassment" actually has occurred, and whether the person seeking information is a complainant, a person who believes his or her own actions may be the subject of criticism (even if unwarranted), or a third party.

Often there is a desire that a consultation be confidential or "off the record." This can usually be achieved when individuals discuss concerns about sexual harassment without identifying the other persons involved, and sometimes even without identifying themselves. Confidential consultations about sexual harassment also may be available from persons who, by law, have special professional status, such as:

i. Counselors at Counseling and Psychological Services (CAPS), http://caps.stanford.edu
b. Direct Communication—An individual may act on concerns about sexual harassment directly, by addressing the other party in person or writing a letter describing the unwelcome behavior and its effect and stating that the behavior must stop. A Sexual Harassment Adviser can help the individual plan what to say or write, and likewise can counsel persons who receive such communications. Reprisals against an individual who in good faith initiates such a communication violate this policy.

c. Third Party Intervention—Depending on the circumstances, third party intervention in the workplace, student residence or academic setting may be attempted. Third party intervenors may be the Sexual Harassment Advisers, human resources professionals, the ombudspersons, other faculty or staff, or sometimes mediators unrelated to the University.

When third party intervention is used, typically the third party (or third parties) will meet privately with each of the persons involved, try to clarify their perceptions and attempt to develop a mutually acceptable understanding that can insure that the parties are comfortable with their future interactions. Other processes, such as a mediated discussion among the parties or with a supervisor, may also be explored in appropriate cases.

Possible outcomes of third party intervention include explicit agreements about future conduct, changes in workplace assignments, substitution of one class for another, or other relief, where appropriate.

d. Formal Grievance, Appeal, and Disciplinary Processes—Grievance, appeal, or disciplinary processes may be pursued as applicable.

i. Grievances and Appeals—The applicable procedure depends on the circumstances and the status of the person bringing the charge and the person against whom the charge is brought. Generally, the process consists of the individual’s submission of a written statement, a process of fact-finding or investigation by a University representative, followed by a decision and, in some cases, the possibility of one or more appeals, usually to Stanford administrative officers at higher levels. The relevant procedure (see below) should be read carefully, since the procedures vary considerably.

If the identified University fact-finder or grievance officer has a conflict of interest, an alternate will be arranged, and the Director of the Sexual Harassment Policy Office or the Director of Employee and Labor Relations can help assure that this occurs.

In most cases, grievances and appeals must be brought within a specified time after the action complained of. While informal resolution efforts will not automatically extend the time limits for filing a grievance or appeal, in appropriate circumstances the complainant and the other relevant parties may mutually agree in writing to extend the time for filing a grievance or appeal.

A list of the established grievance and appeal procedures is located at http://hrweb.stanford.edu/elr/policies/list_grievance_procedures.html. Copies may also be obtained from the Sexual Harassment Policy Office, http://www.stanford.edu/group/SexHarass.

Copies of the following may be obtained from Employee and Labor Relations, 651 Serra Street:

1. “Solving Workplace Problems at Stanford: Understanding the Staff Dispute Resolution Policy” (also at http://hrweb.stanford.edu/forms/staffresolution.pdf.)

ii. Disciplinary Procedures—In appropriate cases, disciplinary procedures may be initiated. The applicable disciplinary procedure depends on the status of the individual whose conduct is in question. For example, faculty are subject to the Statement on Faculty Discipline (http://www.stanford.edu/dept/provost/faculty/policies/handbook/ch4.html#statementonfacultydiscipline), and students to the Fundamental Standard. For additional information related to student disciplinary procedures, see the Office of Community Standards (http://studentaffairs.stanford.edu/communitystandards).

The individuals referenced in this section are available to discuss these options and differing methods for dealing with sexual harassment.

4. Procedural Matters

a. Investigations—If significant facts are contested, an investigation may be undertaken. The investigation will be conducted in a way that respects, to the extent possible, the privacy of all of the persons involved. In appropriate cases, professional investigators may be asked to assist in the investigation. The results of the investigation may be used in the third party intervention process or in a grievance or disciplinary action.

b. Recordkeeping—The Sexual Harassment Policy Office will track reports of sexual harassment for statistical purposes and report at least annually to the University President concerning their number, nature and disposition.

The Sexual Harassment Policy Office may keep confidential records of reports of sexual harassment and the actions taken in response to those reports, and use them for purposes such as to identify individuals or departments likely to benefit from training so that training priorities can be established. No identifying information will be retained in cases where the individual accused was not informed that there was a complaint.

c. Indemnification and Costs—The question sometimes arises as to whether the University will defend and indemnify a Stanford employee accused of sexual harassment. California law provides, in part, “An employer shall indemnify [its] employee for all that the employee necessarily expends or loses in direct consequence of the discharge of his [or her] duties as such.” The issue of indemnification depends on the facts and circumstances of each situation. Individuals who violate this policy, however, should be
5. Resources for Dealing with Sexual Harassment

a. Advice—Persons who have concerns about sexual harassment should contact the Sexual Harassment Policy Office, any Sexual Harassment Adviser at http://harass.stanford.edu/SHadvisers.html or one of the other individuals listed below. Reports should be made as soon as possible: the earlier the report, the easier it is to investigate and take appropriate remedial action. When reports are long delayed, the University will try to act to the extent it is reasonable to do so, but it may be impossible to achieve a satisfactory result after much time has passed.

Likewise, anyone who receives a report or a grievance involving sexual harassment should promptly consult with the Sexual Harassment Policy Office or with a Sexual Harassment Adviser.

There are a number of individuals specially trained and charged with specific responsibilities in the area of sexual harassment. In brief, they are:

i Sexual Harassment Advisers (http://harass.stanford.edu/SHadvisers.html) serve as resources to individuals who wish to discuss issues of sexual harassment, either because they have been harassed or because they want information about the University’s policy and procedures. There is usually at least one Adviser assigned to each of the schools at the University and to each large work unit; most of the residence deans also have been appointed as Sexual Harassment Advisers. Advisers are also authorized to receive complaints.

ii The Director of the Sexual Harassment Policy Office is responsible for the implementation of this policy. The Director’s Office also provides advice and consultation to individuals when requested; receives complaints and coordinates their handling; supervises the other Advisers; encourages and assists prevention education for students, faculty and staff; keeps records showing the disposition of complaints; and generally coordinates matters arising under this policy. Because education and awareness are the best ways to prevent sexual harassment; developing awareness, education and training programs and publishing informational material are among the most important functions of the Sexual Harassment Policy Office (http://harass.stanford.edu).

iii As stated above, individuals with concerns about sexual harassment may also discuss their concerns informally with psychological counselors (for example through CAPS or the HELP Center), chaplains (through the Memorial Chapel), or the University ombudsperson. For more information, see http://harass.stanford.edu/resources.html.

b. External Reporting—Sexual harassment is prohibited by state and federal law. In addition to the internal resources described above, individuals may pursue complaints directly with the government agencies that deal with unlawful harassment and discrimination claims, e.g., the U.S. Equal Employment Opportunity Commission (EEOC), the Office for Civil Rights (OCR) of the U.S. Department of Education, and the State of California Department of Fair Employment and Housing (DFEH). These agencies are listed in the Government section of the telephone book. A violation of this policy may exist even where the conduct in question does not violate the law.

6. Consensual Sexual or Romantic Relationships

a. In General—There are special risks in any sexual or romantic relationship between individuals in inherently unequal positions, and parties in such a relationship assume those risks. In the University context, such positions include (but are not limited to) teacher and student, supervisor and employee, senior faculty and junior faculty, mentor and trainee, adviser and advisee, teaching assistant and student, coach and athlete, and the individuals who supervise the day-to-day student living environment and student residents. Because of the potential for conflict of interest, exploitation, favoritism, and bias, such relationships may undermine the real or perceived integrity of the supervision and evaluation provided, and the trust inherent particularly in the teacher-student context. They may, moreover, be less consensual than the individual whose position confers power or authority believes. The relationship is likely to be perceived in different ways by each of the parties to it, especially in retrospect.

Moreover, such relationships may harm or injure others in the academic or work environment. Relationships in which one party is in a position to review the work or influence the career of the other may provide grounds for complaint by third parties when that relationship gives undue access or advantage, restricts opportunities, or creates a perception of these problems. Furthermore, circumstances may change, and conduct that was previously welcome may become unwelcome. Even when both parties have consented at the outset to a romantic involvement, this past consent does not remove grounds for a charge based upon subsequent unwelcome conduct.

Where such a relationship exists, the person in the position of greater authority or power will bear the primary burden of accountability, and must ensure that he or she—and this is particularly important for teachers—does not exercise any supervisory or evaluative function over the other person in the relationship. Where such recusal is required, the recusing party must also notify his or her supervisor, department chair or dean, so that such chair, dean or supervisor can exercise his or her responsibility to evaluate the adequacy of the alternative supervisory or evaluative arrangements to be put in place. Staff members may notify their local human resources officers. To reiterate, the responsibility for recusal and notification rests with the person in the position of greater authority or power. Failure to comply with these recusal and notification requirements is a violation of this policy, and therefore grounds for discipline. The University has the option to take any action necessary to insure compliance with the spirit of this recusal policy, including transferring either or both employees in order to minimize disruption of the work group. In those extraordinarily rare situations where it is programmatically infeasible to provide alternative supervision or evaluation, the cognizant Dean or Director must approve all evaluative and compensation actions.

b. With Students—At a university, the role of the teacher is multifaceted, including serving as intellectual guide, counselor, mentor and adviser; the teacher’s influence and authority extend far beyond the classroom. Consequently and as a general proposition, the University believes that a sexual or romantic relationship between a teacher and a student, even where consensual and whether or not the student would otherwise be subject to supervision or evaluation by the teacher, is inconsistent with the proper role of the teacher, and should be avoided. The University therefore very strongly discourages such relationships.
7. Policy Review and Evaluation—This policy went into effect on October 6, 1993, and was amended on November 30, 1995, and on May 30, 2002. It is subject to periodic review, and any comments or suggestions should be forwarded to the Director of the Sexual Harassment Policy Office.

Resources
The following is a summary of resources concerning sexual harassment available to members of the Stanford Community:

A brochure containing the policy, a list of current sexual harassment advisers, confidential resources, and other helpful information is available online at the Sexual Harassment Policy Office (http://harass.stanford.edu) website, and in printed form from the Sexual Harassment Policy Office at Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu. Copies of the University policy on sexual assault, which complements this sexual harassment policy, as well as all other documents mentioned in this section, are also available at the Sexual Harassment Policy Office.

All faculty, staff, and students who have questions regarding this policy and its enforcement can consult with a Sexual Harassment Adviser or can be directed to the local Personnel Officer or Regional Human Resources Manager. Faculty members should contact their dean or department chair, and students should contact the Director of the Sexual Harassment Policy Office or the Dean of Student Affairs.

Sexual Harassment Policy Office—telephone: (650) 723-1583; email: harass@stanford.edu.

Director: Laraine Zappert (Clinical Professor, Psychiatry and Behavioral Sciences)

Assistant Director: Nanette Andrews

Sexual Misconduct and Sexual Assault

Summary
The following summarizes the policy on Sexual Assault and provides information on resources available to members of the Stanford community.

Policy
Under Title IX, sexual violence (sexual misconduct and sexual assault) is a severe form of sexual harassment. Sexual misconduct and sexual assault are unacceptable and are not tolerated at Stanford University. All University employees (including student residence staff employees) have a duty to report claims of sexual misconduct or sexual assault to Cathy Glaze, Title IX Coordinator at (650) 497-4955 (voice), titleix@stanford.edu, https://titleix.stanford.edu/. For students, report claims to the Title IX Coordinator or the Office of Sexual Assault and Relationship Abuse (SARA) at (650) 725-1056 or saraoﬃce@stanford.edu.

The University urges an individual who has been subjected to sexual misconduct or sexual assault to make an official report. A report of the matter will be dealt with promptly. Confidentiality will be maintained to the extent possible.

The University is committed to providing information regarding on- and off-campus services and resources to all parties involved.

Students, faculty and staff found to be in violation of this policy will be subject to discipline up to and including termination, expulsion or other appropriate institutional sanctions; affiliates and program participants may be removed from University programs and/or prevented from returning to campus.

A comprehensive web site dedicated to sexual violence awareness, prevention and support can be found at Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (http://studentaffairs.stanford.edu/sara). The site contains a list of resources and describes reporting options.

Definitions
What is Sexual Misconduct?
Sexual misconduct is the commission of an unwanted sexual act, whether by an acquaintance or by a stranger, that occurs without indication of consent.

What is Sexual Assault?
Sexual assault is the actual, attempted or threatened unwanted sexual act, whether by an acquaintance or by a stranger, accomplished (1) against a person’s will by means of force (express or implied), violence, duress, menace, fear or fraud, or (2) when a person is incapacitated or unaware of the nature of the act, due to unconsciousness, sleep and/or intoxicating substances.

What is Consent?
Consent is informed, freely given, and mutually understood. Consent requires an affirmative act or statement by each participant. If coercion, intimidation, threats and/or physical force are used, there is no consent. If a person is mentally or physically incapacitated or impaired so that the person cannot understand the fact, nature or extent of the sexual situation, there is no consent; this includes conditions due to alcohol or drug consumption or being asleep or unconscious. Whether one has taken advantage of a position of influence over another may be a factor in determining consent.

Notification
With the consent of the victim, allegations of sexual assault received by University offices or personnel shall be communicated promptly to the Department of Public Safety, 711 Serra Street, telephone 9-911 for emergency response or (650) 723-9633 during normal business hours.

Emergency Services Available to Victims
Victims of sexual assault are urged to seek immediate attention from emergency police, medical, and counseling services. On the Stanford campus and in the immediate vicinity, the following provide 24-hour response and will arrange for police assistance, medical assistance, emotional support services, and advocacy and support:

• “911” Emergency Network: dial 9-911 from University phones or 911 from outside phones
• Santa Clara Valley Medical Center, 751 South Bascom Avenue, San Jose, telephone (408) 885-5000
• YWCA Stanford Hotline, for students, telephone (650) 725-9955
• Stanford Hospital and Clinics, 300 Pasteur Drive, Stanford, telephone (650) 723-5111
• Residence and Graduate Life Deans, page through 723-8222, extension 25085

Non-Emergency Resources
Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (725-1056) provides comprehensive and consistent response
to incidents of sexual and relationship violence to the campus community. SARA provides case consultation to students and staff, case management for reported assaults and information and referrals to services on and off campus. The office also assists with educational outreach and training to increase awareness, sensitivity, and community accountability in the prevention of these acts. Online information is available at the Sexual Assault & Relationship Abuse Education & Response (SARA) (http://studentaffairs.stanford.edu/sara.html) website.

Additional resources for students are available at Vaden Health Service at (650) 723-3785, including short-term counseling, referral to long-term therapy, follow-up pregnancy testing, and testing and treatment for sexually transmitted diseases. Additional services for faculty and staff are available at the University’s HELP Center, Galvez House (723-4577), including general counseling, information, support, and referral. The University ombuds (723-3682) is available to all in the Stanford community for general counseling, advice, and advocacy. Cathy Glaze, Title IX Coordinator, Mariposa House, 588 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 497-4955, (650) 497-9257, titleix@stanford.edu, is available to assist students to address the effects of sexual harassment and sexual violence.

Confidentiality of Information

The University will make reasonable and appropriate efforts to preserve an individual’s privacy and protect the confidentiality of information. However, because of laws relating to reporting and other state and federal laws, the University cannot guarantee confidentiality to those who report incidents of sexual violence except where those reports are privileged communications with those in legally protected roles (set forth below). The professional being consulted should, if possible, make these limits clear before any disclosure of facts.

An individual can speak confidentially with certain individuals in legally protected roles. They include sexual assault counselors such as those at the YWCA Sexual Assault Center at Stanford, the Help Center, Counseling and Psychological Services (CAPS) and clergy. Exceptions to maintaining confidentiality are set by law; for example, physicians and nurses who treat any physical injury sustained during a sexual assault are required to report it to law enforcement. In addition, physicians, nurses, psychologists, psychiatrists, teachers and social workers must report a sexual assault committed against a person under age 18.

Information shared with other individuals is not legally protected from being disclosed. Considerations with respect to a complainant’s request for confidentiality include factors such as the University’s ability to respond effectively, to prevent further harassment or to ensure the safety of the University community. For example, an advisor, the Dean of Student Life, a Residence Dean or a Resident Assistant may need to inform other individuals to protect their safety or rights, in fairness to the persons involved, or in response to legal requirements. As required by law, all disclosures to any University employee of an on-campus sexual assault must be reported for statistical purposes only (without personal identifiers) to the Stanford University Department of Public Safety, which has the responsibility for tabulating and annually publishing sexual assault and other crime statistics. Such reports are for statistical purposes and do not include individual identities.

State law permits law enforcement authorities to keep confidential the identity of a person officially reporting a sexual assault. The Stanford University Department of Public Safety policy is to maintain such confidentiality. However, if the District Attorney files a criminal charge, confidentiality might not be maintained.

If a complaint is filed with the Office of Judicial Affairs then the accused student must be provided with the name of the alleged victim and witnesses, if applicable. However, accommodations can be made to protect the victim’s privacy, as described on the website for the Office of Judicial Affairs.

Information about Options

The University offices responding to allegations of sexual misconduct or sexual assault will inform affected individuals, at a minimum, of the options of: criminal prosecution, civil prosecution, the disciplinary process, the appropriate Title IX grievance procedure, alternative housing assignments, and academic assistance alternatives.

Political Activities

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 1.5.1 Political Activities (https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-1).

Summary

The following summarizes the policy on Political Activities:

- Stanford University, as a charitable entity, is subject to federal, state, and local laws and regulations regarding political activities: campaign activities, lobbying, and the giving of gifts to public officials.

While all members of the University community are naturally free to express their political opinions and engage in political activities to whatever extent they wish, it is very important that they do so only in their individual capacities and avoid even the appearance that they are speaking or acting for the University in political matters.

In the limited circumstances where individuals must speak or act on behalf of the University in the political arena, they must do so in accordance with the provisions of this Guide Memo.

Policy

The following is quoted from the policy:

1. Summary of Legal Requirements and Restrictions

   a. Campaign Activities: contributions of money, goods, or services to candidates for political office and in support of or opposition to ballot measure campaigns are subject to a wide variety of political laws. Depending on the jurisdiction and the campaign, political contributions may be prohibited or limited and, in nearly all cases, are subject to a complicated series of disclosure rules. Because of the University’s tax-exempt status, the University is legally prohibited from endorsing candidates for political office or making any contribution of money, goods, or services to candidates. It is important, therefore, that no person inadvertently cause the University to make such a contribution.

   b. Lobbying: lobbying can generally be described as any attempt to influence the action of any legislative body (for example, Congress, state legislatures, county boards, city councils, and their staffs) or any federal, state, or local government agency. Laws regulating lobbying exist at the federal, state, and local levels but can differ widely in scope, depending on the jurisdiction. Some laws, for example, only regulate lobbying of the legislative branch. Others, however, also cover lobbying of administrative agencies and officers in the executive branch (for example, lobbying for federally-funded grants). To one degree or another, however, most lobbying laws require registration and reporting by individuals engaged in attempts to influence governmental action.

   Tax-exempt organizations are permitted to lobby, and the University engages in lobbying on a limited number of issues, mostly those affecting education, research, and related activities. There is usually some threshold of time or money spent on
lobbying that triggers registration and reporting requirements. Regardless of thresholds, however, no University employee—other than the following individuals, on matters under their jurisdiction—may lobby on behalf of the University without specific authorization:

- President
- Provost
- Deans of the Seven Schools
- Vice Provost and Dean of Research
- Vice President for Business Affairs and Chief Financial Officer
- Executive Director of Human Resources
- Director of the Stanford Linear Accelerator Center
- Director of the Hoover Institution
- General Counsel
- Vice President for Public Affairs

The Vice Provost and Dean of Research may grant permission to faculty members to lobby on behalf of the University for specific purposes. The Director of Government and Community Relations may grant permission to staff members to lobby on behalf of the University for specific purposes. All lobbying on behalf of the University should be coordinated with the Director of Government and Community Relations.

c. Giving of Gifts to Public Officials and Staff: almost all jurisdictions have strict rules on the extent to which gifts and honoraria may be given to public officials (both elected and non-elected officials and, often, staff). In some cases gifts and honoraria are prohibited; in others they are limited; and in most cases they are subject to detailed disclosure. In addition, in some jurisdictions such as California, gifts to both state and local public officials can result in a public official’s disqualification from participation in any governmental action affecting the interests of the donor. Meals, travel, and entertainment are the most common types of gifts, but gift rules can also apply in cases where public officials attend a reception or receive tickets to sporting or other events.

As a non-profit organization, the University generally does not give gifts to public officials and, in those limited cases where it does give such gifts, it must do so in accordance with all applicable laws and regulations. Therefore, any University employee who, on behalf of the University, wishes to make a gift to a public official must receive prior approval from the Director of Government and Community Relations before making such a gift.

d. Reporting of Political Activities: the University must report most of its political activities above certain thresholds. Therefore, any University employee engaging in such activities on behalf of the University should carefully review the remainder of this Guide Memo and should discuss the relevant activities in advance with the Director of Government and Community Relations.

2. Prohibited and Restricted Political Activities

a. In General:

i. No person may, on behalf of the University, engage in any political activity in support of or opposition to any candidate for elective public office (including giving or receiving funds or endorsements), nor shall any University resources be used for such purpose.

ii. No person may, on behalf of the University, lobby (or use University resources to lobby) any federal, state, or local legislative or administrative official or staff member unless specifically authorized to do so. Any lobbying activity, even when authorized, must be conducted in compliance with this Guide Memo, other applicable University policies, and applicable law.

iii. No person may, on behalf of the University, give a gift (or use any University resources to give a gift) to any federal, state, or local official or staff member, except in compliance with this Guide Memo, other applicable University policies, and applicable law.

iv. No person supporting candidates for public office or engaging in other political activities may use University space or facilities or receive University support, except in the limited ways described in section 3A, below.

v. No person may use for lobbying activities federally-funded contract or grant money received by the University.

Even the foregoing activities that are only restricted, rather than prohibited, may be subject to limitations imposed by law. Therefore, any person engaging in the activity, or contemplating doing so, should consult with the Director of Government and Community Relations.

b. Guidelines for Avoiding Prohibited Partisan Political Activities: the following guidelines should assist in preventing the involvement or apparent involvement of the University in political activities in support of or opposition to any candidate for elective public office, that is, partisan political activities. Except in the limited circumstances set forth in section 3B, below:

i. Use of Name and Seal: neither the name nor seal of the University or of any of its schools, departments, or institutions should be used on letters or other materials intended for partisan political purposes.

ii. Use of Address and Telephones: no University office should be used as a return mailing address for partisan political mailings, and telephone service that is paid by the University, likewise, should not be used for partisan political purposes. (Obviously, a student’s dormitory room and telephone service that are personal to the student may be used for these purposes.)

iii. Use of Title: the University title of a faculty or staff member or other person should be used only for identification and should be accompanied by a statement that the person is speaking as an individual and not as a representative of the University.

iv. Use of Services and Equipment: University services, such as Interdepartmental Mail; equipment, such as duplicating machines, computers, and telephones; and supplies should not be used for partisan political purposes.

v. Use of Personnel: no University employee may, as part of his or her job, be requested to perform tasks in any way related to partisan political purposes.

3. Permissible Activities

a. In General: as noted above, the federal, state, and local laws which limit the partisan political activities that can take place in University facilities and with University support in no way inhibit...
The expression of personal political views by any individual in the University community. Nor do they forbid faculty, students, or staff from joining with others in support of candidates for office or in furtherance of political causes. There is no restriction on discussion of political issues or teaching of political techniques. Academic endeavors which address public policy issues are in no way affected.

Because the University encourages freedom of expression, political activities which do not reasonably imply University involvement or identification may be undertaken so long as regular University procedures are followed for use of facilities. Examples of permissible activities are:

i. Use of areas, such as White Plaza, for tables, speeches, and similar activities.  

ii. Use of auditoriums for speeches by political candidates, but subject to rules of the Internal Revenue Service, the Federal Election Commission, and the California Fair Political Practices Commission, and other applicable laws. Arrangements must be made with University Events and Services. (See also Guide Memo 82.1, Public Events (http://adminguide.stanford.edu/82_1.pdf), for more information.)

To reiterate, because tax and political compliance laws impose restrictions, and even prohibitions, on certain political activities and on the use of buildings and equipment at a nonprofit institution such as the University, any such activities must be in compliance with these legal requirements. Individuals taking political positions for themselves or groups with which they are associated, but not as representatives of the University, should clearly indicate, by words and actions, that their positions are not those of the University and are not being taken in an official capacity on behalf of the University.

b. Limited University Political Activities: limited activities relating to specific federal, state, or local legislation or ballot initiatives are permissible where (1) the subject matter is directly related to core interests of the University’s activities; (2) the President has determined that the University should take a position; and (3) the individuals who speak or write on the University’s behalf are specifically authorized to do so.

4. Research Involving Political Campaigns: Any Stanford researcher considering doing research involving political campaigns should consult with the General Counsel’s Office for any legal restrictions, and should submit the research proposal in advance to Stanford’s Institutional Review Board as appropriate under its policies and procedures.

5. Responsibility for Interpretation: the Director of Government and Community Relations, in consultation with the General Counsel, is the administrative officer responsible for interpretation and application of the above guidelines. Questions on whether planned student activities are consistent with the University’s obligations should be directed to the Dean of Students, who will consult with the Director of Government and Community Relations and/or the General Counsel. All other questions on whether planned activities are consistent with the University’s obligations should be addressed directly to the Director of Government and Community Relations or the General Counsel.

Campus Disruptions

The Policy on Campus Disruption was promulgated in 1967, and states that:

Policy

The following is quoted from the policy:

Because the rights of free speech and peaceable assembly are fundamental to the democratic process, Stanford firmly supports the rights of all members of the University community to express their views or to protest against actions and opinions with which they disagree.

All members of the University also share a concurrent obligation to maintain on the campus an atmosphere conducive to scholarly pursuits, to preserve the dignity and seriousness of University ceremonies and public exercises, and to respect the rights of all individuals.

The following regulations are intended to reconcile these objectives.

It is a violation of University policy for a member of the faculty, staff, or student body to:

1. prevent or disrupt the effective carrying out of a University function or approved activity, such as lectures, meetings, interviews, ceremonies, the conduct of University business in a University office, and public events.
2. obstruct the legitimate movement of any person about the campus or in any University building or facility.

Members of the faculty, staff, and student body have an obligation to leave a University building or facility when asked to do so in the furtherance of the above sections by a member of the University community acting in an official role and identifying himself or herself as such; members of the faculty, staff, or student body also have an obligation to identify themselves, when requested to do so by such a member of the University community who has reasonable grounds to believe that the person(s) has violated section (1) or (2) of this policy and who has so informed the person(s).

The policy has been applied to the following actions: refusal to leave a building which has been declared closed; obstructing the passage into or out of buildings by sitting in front of doorways; preventing University employees from entering their workplace; preventing members of a class from hearing a lecture or taking an examination, or preventing the instructor from giving a lecture, by means of shouts, interruptions, or chants; refusing to leave a closed meeting when unauthorized to attend; and intruding upon or refusing to leave a private interview.

It should be understood that while the above are examples of extraordinarily disruptive behavior, the application of the Policy also takes situational factors into consideration. Thus, for example, conduct appropriate at a political rally might constitute a violation of the Policy on Campus Disruption if it occurred within a classroom.

There is no “ordinary” penalty which attaches to violations of the Policy on Campus Disruption. In the past, infractions have led to penalties ranging from censure to expulsion. In each case, the gravity of the offense and prior conduct of the student are considered; however, the more serious the offense, the less it matters that a student has otherwise not done wrong.

Use of the Main Quadrangle and Memorial Court

Policy

The following is quoted from the policy:

The Main Quadrangle and Memorial Court are part of Stanford University’s academic preserve due to their locations at the heart of the campus. To protect and enhance their historic status, University policy
limits activities primarily to established or traditional ceremonies and events.

To schedule an event, approval must be obtained in advance from the Office of Stanford Events (see below). Unscheduled events, protests, or activities are prohibited.

Requests for waivers to this policy must be submitted in advance and in writing to the Office of Stanford Events. Exceptions may be granted only in extraordinary cases.

**Resources**

The following is a summary of resources available:

For instructions on use of the Main Quadrangle/Memorial Court, contact the Office of Special Events and Protocol (OSEP) at (650) 724-1387, or at the OSEP (https://osep.stanford.edu) web site.

Note: White Plaza is made available to Stanford students, faculty, and staff for events other than scheduled "established or traditional ceremonies and events" including those that may involve amplified sound. For further information on the use of such other venues, students should contact Student Activities and Leadership (SAL) at (650) 723-2733, or at the SAL (http://studentaffairs.stanford.edu/sal) web site. Faculty and staff should contact the Office of Special Events and Protocol (OSEP) (https://osep.stanford.edu).

**Oval Policy**

The Oval is considered to be the initial and official visual entrance to the Stanford University campus. Given this historic and aesthetic status, it is in the best interests of the University community and visiting members of the public to maintain its open and pristine space, to help preserve its natural beauty and environmental integrity. The Oval also presents the formal academic image of the University, leading directly to departments, classrooms and other academic space, and faculty and graduate student offices, and thus is subject to the University’s Noise Policy.

The University prohibits formal or informal events of any kind to take place in the Oval. Gatherings of Stanford students, faculty, and staff such as demonstrations, rallies, or dances may take place in White Plaza, which can be reserved through the Office of Student Activities. Weddings also are not allowed in the Oval but are in certain circumstances allowed in Memorial Church (refer to Memorial Church wedding ceremony guidelines (http://www.stanford.edu/group/religiouslife/services/Weddings.html)).

The Oval is considered a pedestrian zone and appropriate use of its space includes walking, running, reading, relaxing, and other limited recreational use of the lawn area (such as quiet, very small picnics and Frisbee), unless or until such use damages or otherwise harms the property.

Cooking food or use of any grill/barbecue or open flame is strictly prohibited. Fireworks or the use of other incendiary devices represent a safety hazard to the area and are therefore prohibited. Amplified sound from items such as boom boxes, musical instruments, or the use of bullhorns or amplified speakers is also prohibited. Only authorized Stanford service vehicles are permitted inside the Oval areas.

As the official entrance to the University, the Oval offers public access to general parking spaces in the marked areas surrounding the outer perimeter of the Oval; drivers are expected to obey all traffic signs and limitations. Buses are subject to additional restrictions.

For further information regarding this policy, contact the Executive Director of Special Events and Protocol, 724-1387 or see the Office of Special Events & Protocol (http://osep.stanford.edu/policies/oval.html) web site.

**White Memorial Plaza**

White Plaza is a Stanford University space available for programs, speeches, rallies, information tables, banners and posters. It is considered a “free speech area” on campus. Students should follow the policy outlined on the Student Activities and Leadership (http://sal.stanford.edu/plan-event/venues/outdoor-spaces/white-memorial-plaza) web site to engage in student programmatic activity. Due to Stanford’s non-profit status, for-profit commercial activity or corporate promotion of any kind is strictly regulated.

White Plaza is in the center of campus, so event planners should take particular care to avoid disruptive impact on classes, business, or events in the surrounding buildings. Events in White Plaza must be organized by University entities (student groups, departments, and programs) and require prior approval from Student Activities and Leadership (SAL) (https://sal.stanford.edu).

**Noise and Amplified Sound Policy**

The following is quoted from the policy:

Stanford is not only an academic institution but a residential community as well. It is the responsibility of all faculty, students, and staff to moderate noise especially during an event or activity held on campus. Supporting the mission of the University and respecting those who are studying, researching, or otherwise carrying out academic-related activities is a Stanford priority. The campus must require a conducive atmosphere to ensure these endeavors are accomplished and supported. Disturbing noise in or around a residence or other campus buildings which infringe on the rights of other residents or members of the University community is considered a violation of this policy. As part of the event planning process, the event sponsor must obtain all appropriate approvals regarding the use of amplified sound during an event or activity.

In addition to University policy on noise and amplified sound, the County of Santa Clara also has a county ordinance on sound and all members of the Stanford community and visitors to campus are subject to and must comply with this order. For more information, see the Santa Clara Ordinance Code, Control of Noise and Vibration (https://www.municode.com/library/ca/santa_clara_county/codes/code_of_ordinances?nodeId=TITBRE_DIVB11ENHE_CHVIIICONOVI) web site.

**Resources**

Information regarding whether and how the use of amplified sound is permitted is available from the following sources, which must be consulted for prior approval:

1. The Office of Student Activities: phone: 723-2733, or see http://studentaffairs.stanford.edu/sal/policies/noise
2. Registrar’s Scheduling Office: email reg-events@stanford.edu, or see http://studentaffairs.stanford.edu/registrar/faculty/events.

**No Camping**

Camping (that is, staying outside overnight on University property) is not permitted without University permission. Permission is granted through the Office of the Provost or the Provost’s designee.
Prohibition of the Possession of Dangerous Weapons on Campus

Policy

Prohibition of the Possession of Dangerous Weapons on Campus

Policy

Stanford University prohibits the possession of any of the following weapons on the Stanford campus: firearm, dirk, dagger, ice pick, knife having a blade longer than 2 1/2 inches (except for lawful use in food preparation or consumption), folding knife with a blade that locks into place, razor with an unguarded blade, taser, stun gun, instrument that expels a metallic projectile (such as a BB or a pellet), spot marker gun, or any other weapons prohibited by California Penal Code Sections 626.10 and 626.9.

For purposes of this policy, the term “Stanford campus” shall include all the lands, buildings, and facilities of Leland Stanford Junior University, whether owned, leased, and controlled, and whether located in the United States or abroad (excluding the privately owned, managed, or leased residences of faculty or staff that are located on the main Stanford campus in unincorporated Santa Clara County). In addition to the prohibited weapons, ammunition is not allowed to be stored or possessed in university owned, leased, and controlled buildings (excluding the privately owned, managed, or leased residences of faculty or staff that are located on the main Stanford campus in unincorporated Santa Clara County). In the event a federal or state law or a county ordinance is more restrictive than this policy, federal or state law or the county ordinance shall apply.

Requests for an exemption from this policy for academic purposes may be requested in writing to the Director of the Stanford University Department of Public Safety. Each request will be considered on a case-by-case basis and be evaluated by the Office of Risk Management and the Department of Public Safety. A written letter will be provided by the Director of the Department of Public Safety in the event an exemption is granted.

The Stanford University Department of Public Safety does not provide facilities for the storage of firearms.

Student Alcohol Policy

This document clarifies the University’s expectations and approach related to the use of alcohol by students. The University’s Controlled Substances and Alcohol Policy is also applicable. The full text is contained in the Controlled Substance and Alcohol (http://adminguide.stanford.edu/23_6.pdf) policy.

Preamble

The Fundamental Standard has set the standard of conduct for students at Stanford since 1896. It states: “Students at Stanford are expected to show both within and without the University such respect for order, morality, personal honor and the rights of others as is demanded of good citizens.” Implicit in the Standard is the understanding that students are responsible for making their own decisions and accepting the consequences of those decisions.

The University is committed to the health, safety and well-being of each member of the Stanford community. In order to further student learning, development and success and to promote the University’s academic mission, Stanford fosters an environment of personal and collective responsibility and respectful citizenship. This means that all members of the university community—students, faculty and staff—have a role in safeguarding a healthy learning environment free of the consequences of alcohol misuse. The University also strives to create a culture that supports students who do not use alcohol and students who use alcohol in a safe, legal and responsible fashion.

Legal Background

Members of the Stanford community are expected to abide by all federal, state and local laws, including those governing alcohol consumption and distribution. Under California law, it is illegal for anyone under the age of 21 to purchase alcohol or to possess alcohol in a public space. It is also illegal for anyone to furnish alcohol to an individual under the age of 21. Other state laws governing the use of alcohol are listed below.

While it is not the responsibility of most Stanford officials to enforce state law, it is the responsibility of the University’s Department of Public Safety, and accordingly they enforce all state alcohol laws when they encounter violations. All community members should understand the law and, as individuals, ensure that they themselves do not violate it.

In addition, it is the responsibility of all community members to ensure that the University does not, through their actions, violate the law. Accordingly, official University functions, including events held by registered student groups, are not allowed to provide alcohol to those under 21, and no University funds may be used to purchase alcohol for that purpose. Violations of this requirement can result in both criminal prosecution and University administrative action, including dismissal from the University.

Responsible Alcohol Use

Stanford students are expected to behave responsibly, both in the classroom and outside, both on campus and off. In particular, the University does not tolerate reckless drinking and its consequent harmful behaviors. The University is especially concerned about the misuse of distilled alcohol products (“hard alcohol”), and the dangers that arise from that misuse.

All students should understand the physical and behavioral effects of alcohol misuse, and should avoid such misuse themselves. In addition, they are expected to do their part to ensure the safety of fellow students whom they perceive to be engaged in reckless drinking behavior or to be suffering from its consequences.

The University provides educational resources to assure that students understand the effects of alcohol misuse and know how to respond when they perceive others to be engaged in dangerous behavior.

Reckless drinking and encouraging reckless drinking are violations of University policy, and may be subject to disciplinary action. Extreme or repeated violations may result in dismissal from the University.

More generally, students are expected to make legal, healthy, responsible choices concerning their personal use of alcohol and the University supports them in this endeavor through education and other resources. The University sponsors activities and programs focused on students who choose not to drink or to drink lightly, as well as resources and services to assist students who need help for themselves or others related to alcohol use.
Authority, Application, and Enforcement
Responsibility for application of the Student Alcohol Policy resides with the Vice Provost for Student Affairs. The Office of Alcohol Policy and Education reports to the Vice Provost for Student Affairs and is expected to coordinate and implement alcohol programs. (The University’s Controlled Substances and Alcohol Policy is also applicable. The full text is contained at the Controlled Substances and Alcohol web site (https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-8).

The Stanford University Department of Public Safety enforces federal, state and local laws among students, other community members, guests and visitors.

Alcohol Policy Violations
The Office of Alcohol Policy and Education will work with the following offices to address violations of the University’s alcohol policy as determined by the specifics of each situation.

- The Office of Residential Education (http://studentaffairs.stanford.edu/resed) for undergraduate students, residential groups, fraternities and sororities
- Graduate Life Office (GLO) (http://glo.stanford.edu) for graduate students
- Student Activities and Leadership (SAL) (http://studentaffairs.stanford.edu/sal) for voluntary student organizations
- Department of Athletics, Physical Education and Recreation (DAPER) (http://www.gostanford.com/school-bio/stan-administration.html) for student athletes and athletic groups
- Such other offices as are appropriate under particular circumstances

Violations may be referred to the Office of Judicial Affairs (http://judicialaffairs.stanford.edu) (for individual students) and the Organization Conduct Board (http://studentaffairs.stanford.edu/studentlife/ocb) (for student groups). The Dean of Student Life (http://studentaffairs.stanford.edu/studentlife) may take action as well in certain circumstances.

Getting Help: Resources Available to Students
Students have access to a variety of University resources (http://alcohol.stanford.edu/resources.html).

Additional University Regulations
- Students living in University residences sign a residence agreement (http://www.stanford.edu/dept/rde/shs/res_agree.htm) that outlines housing policies and expectations for conduct. Violations of the residence agreement can lead to loss of housing. [http://www.stanford.edu/dept/rde/shs/res_agree.htm]
- All parties must be registered with the University, and availability of alcohol is regulated by party planning guidelines coordinated by the Office of Student Activities and Leadership. [http://studentaffairs.stanford.edu/sal/planning/party]

Other restrictions apply to particular circumstances
- Frosh Housing—Alcoholic beverages are prohibited at all-frosh house events in common area spaces.
- University Funds and the Purchase of Alcohol—No University funds or funds collected by the University may be used in a way that violates the alcohol policy. In student residences, house funds (funds collected by Student Financial Services or other University offices) may not be used to buy alcohol. Any decision to use student-collected funds to buy alcohol must be made lawfully, thoughtfully, fairly and in a way that respects the views of all students. Students must not be required to contribute to the purchase of alcohol.
- Dining Hall—Students may not possess or consume alcoholic beverages in Stanford Dining Halls during meal times and food service. University Dining staff can deny admission, access or meal service to anyone who is believed to be intoxicated by the Dining Management staff.
- White Plaza—Alcoholic beverages in White Plaza are prohibited.
- End of Quarter Period and Finals Week—No registered parties (with or without alcohol) can occur during the End of the Quarter Period (dead week) or Finals Week.
- Athletic Facilities—No alcohol is permitted inside Stanford athletic facilities public spaces during athletic events.
- Stanford Conferences and University Facilities—The University requires that event sponsors and student groups wishing to offer alcoholic beverages at their programs and events operate within state and local laws as provided by the Department of Alcohol and Beverage Control (ABC). Alcohol service is not allowed in classrooms.
- Admit Weekend—Stanford students are prohibited from providing, serving or in anyway making alcohol available to any prospective frosh (ProFro). All student groups/organizations and residences may host only alcohol-free parties or events during Admit Weekend. This specifically means that no alcohol is to be present, served or consumed at any student group/organization and/or dorm function during Admit Weekend.
- New Student Orientation (NSO) Period—At no time should any Stanford student provide, serve or in any way make alcohol available to any new, incoming undergraduate student (freshman or transfer). All undergraduate student groups/organizations and residences will host only alcohol-free parties or events during Orientation. This specifically means that no alcohol is to be present, served, or consumed at any student group/organization and/or dorm function during NSO.

California State Laws
Students should be familiar with California laws governing the consumption of alcohol. The following summarizes those laws most relevant to individuals.

- It is illegal for persons under the age of 21 to possess an alcoholic beverage in any public place or any place open to the public (CA Business and Professions Code 25662).
- Any person who furnishes, gives or sells any alcoholic beverage to someone under the age of 21 is guilty of a misdemeanor (CA Business and Professions Code 25662(a)).
- Any person under the age of 21 who attempts to purchase an alcoholic beverage is guilty of an infraction (CA Business and Professions Code 25658.5).
- Any person under the influence of alcohol in a public place and unable to exercise care for one’s own safety or that of others is guilty of a misdemeanor (CA Penal Code 647(f)).
- It is illegal for persons to operate a motor vehicle while under the influence of alcohol or other intoxicants or with a blood alcohol level of 0.08% or higher (CA Vehicle Code Section 23152). NOTE: A golf cart is a motor vehicle.
Hazing Policy

Hazing is not permitted at Stanford University. No individual, recognized student organization, club, team, or any other Stanford-affiliated student group is permitted to plan, engage in, or condone hazing, on or off the Stanford campus.

Definition of Hazing at Stanford University

Hazing includes any activity done in connection with a student organization, regardless of whether the organization is officially recognized at Stanford, that causes or is reasonably likely to cause another student to suffer bodily danger, physical harm, or significant personal degradation or humiliation, even if no bodily danger, physical harm, or significant degradation or humiliation in fact results. Hazing might occur during initiation or pre-initiation into a student organization, but is not limited to these time frames. Any individual who plans or intentionally assists in hazing activity has engaged in hazing, regardless of whether that individual is present when the hazing activity occurs.

Consequences of a Violation

Stanford University expects its students to conduct themselves in socially responsible and respectful ways. Thus, participation in hazing, either as an individual or as part of any student group, may result in serious individual and organizational consequences including, but not limited to: disciplinary action up to and including expulsion; permanent loss of organizational recognition; and loss of eligibility to remain a member of any club, team, or other Stanford-affiliated student group. Consent, implied or expressed, is not a defense to any complaint or charge alleging a hazing violation.

A number of University offices may take institutional action, including: the Organizational Conduct Board; Office of Community Standards; or other University offices, such as the Vice Provost for Student Affairs or the Department of Athletics.

Applications

Stanford’s hazing policy is distinct from and broader than California Penal Code section 245.6, which prohibits: “any method of initiation or pre-initiation into a student organization or student body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury to any former, current, or prospective student of any school, community college, college, university or other educational institution in this state.” A violation of Penal Code Section 245.6 that does not result in serious bodily injury is punishable as a misdemeanor, while a violation that results in death or injury is punishable as a felony or a misdemeanor. Nothing in this hazing policy prevents Stanford from taking institutional action against hazing activity that falls outside the narrower definition of Penal Code section 245.6.

Stanford’s hazing policy is not intended to prohibit student recruitment or new or continuing member activities that are positive and educational in nature, designed to instill a group ethos or unity. Its intent is to deter those behaviors that cause or are likely to cause danger, harm or humiliation to another student.

Stanford’s hazing policy is not intended to apply to customary athletic events or other similar institutionally-approved contests or competitions.

Questions regarding hazing policies related to fraternities and sororities should be directed to the Office of Fraternity and Sorority Life at (650) 723-0778. For all other student groups, contact Student Activities and Leadership at (650) 723-2445.

Smoke-Free Environment

Applicability

Applies to all academic and administrative units of Stanford University, including SLAC and all campus student housing. This policy does not supersede more restrictive policies that may be in force to comply with federal, state, or local laws or ordinances. The President must approve more restrictive policies not required by law.

1. Policy

It is the policy of Stanford University that all smoking, including but not limited to tobacco products and the use of electronic smoking devices, is prohibited in enclosed buildings and facilities and during indoor or outdoor events on the campus.

2. Definition

“Smoke-free” refers to an environment that is free of smoke from, among other things, tobacco products and/or vapors from electronic smoking devices.

3. Guidelines

a. Smoking-Prohibited Areas

Specifically, smoking is prohibited in classrooms and offices, all enclosed buildings and facilities, in covered walkways, in University vehicles, during indoor or outdoor athletic events, during other University sponsored or designated indoor or outdoor events and in outdoor areas designated by signage as “smoking prohibited” areas.

- Ashtrays will not be provided in any enclosed University building or facility.
- “Smoking Prohibited” signs will be posted.

b. Outdoor Smoking Areas

Except where otherwise posted as a “smoking prohibited area,” smoking is generally permitted in outdoor areas, except during organized events. Outdoor smoking in non-prohibited areas must be at least 30 feet away from doorways, open windows, covered walkways, and ventilation systems to prevent smoke from entering enclosed buildings and facilities. To accommodate faculty, staff, and students who smoke, Vice Presidents, Vice Provosts, and Deans may designate certain areas of existing courtyards and patios as smoking areas, and must provide ashtrays. The specific academic or administrative unit(s) will be responsible for absorbing all costs associated with providing designated smoking areas and ashtrays.
4. Enforcement
This policy relies on the consideration and cooperation of smokers and non-smokers. It is the responsibility of all members of the University community to observe and follow this policy and its guidelines.

a. Smoking Cessation Information
Smoking cessation programs are available for faculty and staff through the Center for Research in Disease Prevention, Health Improvement Program (HIP). Students may contact the Health Promotion Program (HPP) through the Student Health Center for smoking cessation information or programs.

b. Repeated Violations
Faculty, staff and, students repeatedly violating this policy may be subject to appropriate action to correct any violation(s) and prevent future occurrences.

5. Implementation and Distribution
This policy will be disseminated to all faculty, staff and students and to all new members of the University Community.

Visitor Policy/University Statement on Privacy
Stanford University has an interest in ensuring that the privacy of its students, faculty, and staff is respected, and that no activities interfere with education, research, or residential life.

The University is private property; however, some areas of the campus typically are open to visitors. These areas include White Plaza, public eating areas (such as those at Tresidder Union), outdoor touring areas, and locations to which the public has been invited by advertised notice (such as for public educational, cultural, or athletic events). Even in these locations, visitors must not interfere with the privacy of students, faculty, and staff, or with educational, research, and residential activities. The University may revoke at any time permission to be present in these, or any other areas. Visitors should not be in academic or residential areas unless they have been invited for appropriate business or social purposes by the responsible faculty member, student, or staff member.

No commercial activity, including taking photos or similar audio or visual recordings that are sold to others or otherwise used for commercial purposes, may occur on the campus or in University programs without the University’s permission. Requests for permission should be submitted to the Director of University Communications or, as appropriate, the Dean of Students, the Department of Athletics, or the Office of Public Events. Recognized student groups and official units of the University will be granted such permission so long as they do not violate privacy or property interests of others; so long as any sale of their products is predominantly on campus to students, faculty, and staff; and so long as they comply with applicable University policies and procedures.

Visitors of this policy may be subject to criminal and/or civil liability, as well as University disciplinary action.

Computer and Network Usage
For a complete text of the currently applicable version of this policy, see Administrative Guide Memo 6.2.1 Computer and Network Usage Policy (https://adminguide.stanford.edu/chapter-6/subchapter-2/policy-6-2-1).

Policy
The following is quoted from the policy:

Users of Stanford network and computer resources have a responsibility not to abuse the network and resources. This policy provides guidelines for the appropriate and inappropriate use of information technologies.

Summary
The following summarizes the policy on Computer and Network Usage:

In particular, the policy provides that users of University information resources must respect software copyrights and licenses, respect the integrity of computer-based information resources, refrain from seeking to gain or permitting others to gain unauthorized access, including by sharing passwords, and respect the rights of other computer users.

This policy covers appropriate use of computers, networks, and information contained therein. As to political, personal and commercial use, the University is a non-profit, tax-exempt organization and, as such, is subject to specific federal, state, and local laws regarding sources of income, political activities, use of property, and similar matters. It also is a contractor with government and other entities, and thus must assure proper use of property under its control and allocation of overhead and similar costs. For these reasons, University information resources must not be used for partisan political activities where prohibited by federal, state, or other applicable laws, and may be used for other political activities only when in compliance with federal, state, and other laws, and in compliance with applicable University policies. Similarly, University information resources should not be used for personal activities not related to appropriate University functions, except in a purely incidental manner. In addition, University information resources should not be used for commercial purposes, except in a purely incidental manner or except as permitted under other written policies of the University or with the written approval of a University officer having the authority to give such approval. Any such commercial use should be properly related to University activities, take into account proper cost allocations for government and other overhead determinations, and provide for appropriate reimbursement to the University for taxes and other costs the University may incur by reason of the commercial use. Users also are reminded that the .edu domain on the Internet has rules restricting or prohibiting commercial use, and thus activities not appropriately within the .edu domain and which otherwise are permissible within the University computing resources should use one or more other domains, as appropriate.

The University’s Information Security Officer is authorized in appropriate circumstances to inspect or monitor private data (including email), such as when there is a reasonable cause to suspect improper use of computer or network resources.

For further information on the topic of peer-to-peer file sharing, see the section above on Copyright.

Stanford University Online Accessibility Policy
Policy
Stanford University will make Stanford Websites and web-based applications accessible to its students, faculty, staff and participants in the University’s programs and activities who have disabilities. All personnel who are involved in the procurement, preparation and maintenance of University Websites and web-based applications should adopt this goal, with the assistance of campus resources dedicated to supporting web accessibility. Stanford Websites and web based applications must either conform to WCAG 2.0 Level AA (http://www.w3.org/TR/WCAG20) or their content and functionality be made available to Users on request (such as by a student request to the Office of Accessible Education) in an equally effective and accessible alternative manner.
Applicability
Stanford’s online accessibility policy applies to all Stanford academic and administrative units that create and maintain web sites and web-based applications used in the programs and activities of the University. See the Stanford University Online Accessibility Policy (http://ucomm.stanford.edu/policies/accessibility-policy) website for the full policy.

Definitions
Stanford Website
Any website or web-based application within the Stanford University (stanford.edu) domain used in the programs or activities of the University.

Users
Stanford Website users are defined as current Stanford students and applicants for admission, Stanford staff and faculty, and participants in the University’s programs and activities.

Accessible
Refers to the concept that people with disabilities are able to independently and timely access and use a product or system, including assistive technologies. Assistive technologies include adaptive hardware and/or software and other devices that are used to increase, maintain, or improve the functional capabilities of individuals with disabilities.

Stanford Online Accessibility Program (“SOAP”) Office
The SOAP Office (http://soap.stanford.edu) provides resources and services for Stanford web designers, developers and content creators to assist them in producing accessible materials. Services include Website accessibility testing and guidance regarding universal design and web standards compliance. The SOAP Office is also the campus resource designated to facilitate online accessibility for Users. To report and seek assistance on web accessibility issues, Users may contact the SOAP Office by email at web-accessibility@stanford.edu or submit a HelpSU ticket through the SOAP Office website.

Office of Accessible Education (“OAE”)
The Office of Accessible Education (http://oae.stanford.edu) is the campus office designated to work with Stanford students with disabilities. OAE provides support services, accommodations, and programs to remove barriers to full participation of students with disabilities in the programs or activities of the University.

Diversity and Access Office (“D&A”)
The Diversity and Access Office (http://diversityandaccess.stanford.edu) oversees compliance with state and federal anti-discrimination laws including the Americans with Disabilities Act and Section 504 of the Rehabilitation Act. D&A provides disability-related access information, and assists faculty, staff and other non-student participants in University programs and activities with disabilities who may need accommodations and/or auxiliary aids to obtain equal access to Stanford facilities, programs and activities. D&A also oversees the ADA/Section 504 Grievance Procedure for students who believe they have been subjected to unlawful discrimination based on a disability or denied access to services or accommodations which the ADA and/or Section 504 require Stanford to provide. Read more about the ADA/Section 504 Grievance Procedure (p. 97).

Accessibility Standard
Stanford University has adopted the Worldwide Web Consortium Web Content Accessibility Guidelines (http://www.w3.org/TR/WCAG20) version 2.0, Level AA Conformance (WCAG 2.0 Level AA) as its goal for accessible Stanford Websites. The guidelines and success criteria of WCAG 2.0 Level AA are organized around the following four principles which lay the foundation for users with disabilities to access and use web content. For a Stanford Website to be accessible under these principles, its content must be:

1. Perceivable – Information and user interface components must be presentable to users in ways they can perceive.
2. Operable – User interface components and navigation must be operable.
3. Understandable – Information and the operation of user interface must be understandable.
4. Robust – Content must be robust enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies.

Implementation Guidelines
1. All personnel responsible for existing Stanford Websites must use good faith efforts, subject to the requirements and exceptions of the applicable laws, to bring those Websites into conformance with WCAG 2.0 AA.
2. New Stanford Website development and purchases, including development and purchases for major revisions and updates of existing Stanford Websites, should conform to WCAG 2.0 Level AA.
3. Vendors seeking to develop or provide Websites or web-based applications for Stanford are to demonstrate that their products satisfy WCAG 2.0 Level AA Success Criteria, unless undue burden or fundamental alteration can be demonstrated (see below). Preferred standards for demonstrating satisfaction of WCAG 2.0 Level AA Success Criteria, and accessibility language for Stanford Website vendor contracts, as well as for other types of Electronic Information Technology vendor contracts, may be obtained from University Procurement (Purchasing and Payment Services) (http://web.stanford.edu/group/fms/fingate/contact/#procure) or from the SOAP Office (https://soap.stanford.edu).
4. Each Stanford Website should contain “Accessibility” contact information for the site’s webmaster and/or the SOAP Office. The contact information may take a variety of forms, such as an email address, a link to a HelpSU page, or a contact form on the site. The recommended location for this information is the Website’s “Contact” or “About Us” page.
5. The SOAP Office will continue to test Stanford Websites for accessibility and report accessibility issues to the webmaster for that site.
6. OAE will continue to seek input from Stanford students regarding accessibility issues.
7. Conformance to WCAG 2.0 Level AA guidelines may be an undue burden due to the nature of the content, the purpose of the resource, the lack of accessible solutions, or an unreasonably high administrative or financial cost necessary to make the resource meet that goal. However, these difficulties do not relieve University programs or activities from meeting applicable legal obligations to provide reasonable accommodations to Users in regard to access to the content and services provided on Stanford Websites. Managers of University programs and activities must be prepared to provide content and/or services in a suitable alternative format (e.g., electronic text file or audio description) or manner upon request (such as by a student to the OAE).

Implementation Assistance
Guidelines and best practices are available from the SOAP Office (http://soap.stanford.edu). In addition, on-campus assistance is available for designing and implementing websites that meet accessibility guidelines and for evaluating the accessibility of existing sites and those under development. If such assistance is needed, visit the SOAP website (http://soap.stanford.edu) or email the SOAP Office at web-accessibility@stanford.edu.
Responding to Accessibility Issues
Recognizing the ongoing evolution of current web content and technologies, the designated webmaster for a particular site, upon being made aware of an accessibility issue on that site, should proceed as follows:

- Acknowledge receipt of the issue in writing (via email) to the User raising the issue, with a copy to the SOAP Office.
- Open an accessibility case for recording the issue and resulting action taken.
- Verify that the issue is an authentic accessibility issue.
- Treat all issues as important. Address any time-sensitive need of the User promptly (generally within a period of no greater than two business days), unless technology or work involved requires more effort, in which case the User will be promptly notified in writing of expected delivery.

Upon receiving a report of an accessibility issue, the SOAP Office shall notify the site’s webmaster, as well as OAE (for reports from students) or D&A (for reports from non-students.) If the SOAP Office, in consultation with the site’s webmaster, determines that the information or service provided on the Stanford Website cannot be made accessible, or that doing so would constitute an undue burden or fundamental alteration, OAE or D&A will engage in an interactive process with the User about alternative methods for providing the information or service and will provide an equally effective alternative format or service. In the event that an alternative format or service cannot be provided or the user is not satisfied with the results, he or she may contact the ADA/Section 504 Compliance Officer at D&A by telephone at (650) 723-0755 or by email at equalopportunity@stanford.edu for assistance in resolving the issue.

For questions about the policy, please contact the SOAP Office (https://soap.stanford.edu/about/contact).

Protection of Sensitive Data

Campus Safety and Criminal Statistics

Nondiscrimination Policy
Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, veteran status, or marital status to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, marital status or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.

The following person has been designated to handle inquiries regarding this nondiscrimination policy: Stanford’s Director of the Diversity and Access Office, Rosa Gonzalez, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu. Stanford’s Title IX Coordinator, Catherine Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Kingscote Gardens (2nd floor), 419 Lagunita Drive, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu. Individuals may also file complaints directly with the Office for Civil Rights, within the United States Department of Education, by following the information on this web site: https://www2.ed.gov/about/offices/list/ocr/complaintintro.html

Student Alcohol Policy

This document clarifies the University’s expectations and approach related to the use of alcohol by students. The University’s Controlled Substances and Alcohol Policy is also applicable. The full text is contained in the Controlled Substance and Alcohol (http://adminguide.stanford.edu/23_6.pdf) policy.

Preamble
The Fundamental Standard has set the standard of conduct for students at Stanford since 1896. It states: “Students at Stanford are expected to show both within and without the University such respect for order, morality, personal honor and the rights of others as is demanded of good citizens.” Implicit in the Standard is the understanding that students are responsible for making their own decisions and accepting the consequences of those decisions.

The University is committed to the health, safety and well-being of each member of the Stanford community. In order to further student learning, development and success and to promote the University’s academic mission, Stanford fosters an environment of personal and collective responsibility and respectful citizenship. This means that all members of the university community—students, faculty and staff—have a role in safeguarding a healthy learning environment free of the consequences of alcohol misuse. The University also strives to create a culture that supports students who do not use alcohol and students who use alcohol in a safe, legal and responsible fashion.

Legal Background
Members of the Stanford community are expected to abide by all federal, state and local laws, including those governing alcohol consumption and distribution. Under California law, it is illegal for anyone under the age of 21 to purchase alcohol or to possess alcohol in a public space. It is also
illegal for anyone to furnish alcohol to an individual under the age of 21. Other state laws governing the use of alcohol are listed below.

While it is not the responsibility of most Stanford officials to enforce state law, it is the responsibility of the University's Department of Public Safety, and accordingly they enforce all state alcohol laws when they encounter violations. All community members should understand the law and, as individuals, ensure that they themselves do not violate it.

In addition, it is the responsibility of all community members to ensure that the University does not, through their actions, violate the law. Accordingly, official University functions, including events held by registered student groups, are not allowed to provide alcohol to those under 21, and no University funds may be used to purchase alcohol for that purpose. Violations of this requirement can result in both criminal prosecution and University administrative action, including dismissal from the University.

**Responsibility for application of the Student Alcohol Policy resides with the following offices to address violations of the University's alcohol policy as determined by the specifics of each situation.**

- The Office of Residential Education [http://studentaffairs.stanford.edu/resed] for undergraduate students, residential groups, fraternities and sororities
- Graduate Life Office [http://glo.stanford.edu] for graduate students
- Student Activities and Leadership [http://studentaffairs.stanford.edu/sal] for voluntary student organizations
- Department of Athletics, Physical Education and Recreation (DAPER) [http://www gostanford.com/school-bio/stan-administration.html] for student athletes and athletic groups
- Such other offices as are appropriate under particular circumstances

**Getting Help: Resources Available to Students**

Students have access to a variety of University resources [http://alcohol.stanford.edu/resources.html].

**Additional University Regulations**

- Students living in University residences sign a residence agreement [http://www.stanford.edu/dept/rde/shs/res_agree.htm] that outlines housing policies and expectations for conduct. Violations of the residence agreement can lead to loss of housing. [http://www.stanford.edu/dept/rde/shs/res_agree.htm]
- All parties must be registered with the University, and availability of alcohol is regulated by party planning guidelines coordinated by the Office of Student Activities and Leadership. [http://studentaffairs.stanford.edu/sal/planning/party]

Other restrictions apply to particular circumstances

- Frosh Housing—Alcoholic beverages are prohibited at all-frosh house events in common area spaces.
- University Funds and the Purchase of Alcohol—No University funds or funds collected by the University be used in a way that violates the alcohol policy. In student residences, house funds (funds collected by Student Financial Services or other University offices) may not be used to buy alcohol. Any decision to use student-collected funds to buy alcohol must be made lawfully, thoughtfully, fairly and in a way that respects the views of all students. Students must not be required to contribute to the purchase of alcohol.
- Dining Hall—Students may not possess or consume alcoholic beverages in Stanford Dining Halls during meal times and food service. University Dining staff can deny admission, access or meal service to anyone who is believed to be intoxicated by the Dining Management staff.
- White Plaza—Alcoholic beverages in White Plaza are prohibited.
- End of Quarter Period and Finals Week—No registered parties (with or without alcohol) can occur during the End of the Quarter Period (dead week) or Finals Week.
- Athletic Facilities—No alcohol is permitted inside Stanford athletic facilities public spaces during athletic events.
Nonacademic Regulations

relevant to individuals.

consumption of alcohol. The following summarizes those laws most

Students should be familiar with California laws governing the

California State Laws

Students should be familiar with California laws governing the

consumption of alcohol. The following summarizes those laws most

relevant to individuals.

- It is illegal for persons under the age of 21 to possess an alcoholic
  beverage in any public place or any place open to the public (CA
  Business and Professions Code 25662).

- Any person who furnishes, gives or sells any alcoholic beverage
  to someone under the age of 21 is guilty of a misdemeanor (CA
  Business and Professions Code 25658(a)).

- Any person under the age of 21 who attempts to purchase an
  alcoholic beverage is guilty of an infraction (CA Business and
  Professions Code 25658.5).

- Any person under the influence of alcohol in a public place and
  unable to exercise care for one’s own safety or that of others is guilty
  of a misdemeanor (CA Penal Code 647(f)).

- It is illegal for persons to operate a motor vehicle while under the
  influence of alcohol or other intoxicants or with a blood alcohol level
  of .08% or higher (CA Vehicle Code Section 23152). NOTE: A golf cart
  is a motor vehicle.

- It is unlawful for a person under the age of 21 years who has 0.05
  percent or more, by weight, of alcohol in his or her blood to drive a
  vehicle (CA Vehicle Code Section 23140(a)).

- It is illegal for a person under the age of 21 to drive a vehicle when he
  or she has a blood alcohol concentration (BAC) of .01% or higher (CA
  Vehicle Code Section 23136).

- It is a misdemeanor to ride a bicycle under the influence of alcohol,
  drugs or both (CA Vehicle Code Section 21200.5).

- It is an infraction to possess an open container of an alcoholic
  beverage while in a motor vehicle (CA Vehicle Code Section 23223).

- It is an infraction for an owner or driver of a motor vehicle to allow
  an open container of alcohol in the passenger area (CA Vehicle Code
  Section 23225).

California Conferences and University Facilities—The University

requires that event sponsors and student groups wishing to offer

alcoholic beverages at their programs and events operate within

state and local laws as provided by the Department of Alcohol and

Beverage Control (ABC). Alcohol service is not allowed in classrooms.

Admit Weekend—Stanford students are prohibited from providing,

serving or in anyway making alcohol available to any prospective

fresh (ProFro). All student groups/organizations and residences

may host only alcohol-free parties or events during Admit Weekend.

This specifically means that no alcohol is to be present, served or

consumed at any student group/organization and/or dorm function
during Admit Weekend.

New Student Orientation (NSO) Period—At no time should any

Stanford student provide, serve or in any way make alcohol available
to any new, incoming undergraduate student (freshman or transfer).

All undergraduate student groups/organizations and residences
will host only alcohol-free parties or events during Orientation.

This specifically means that no alcohol is to be present, served, or

consumed at any student group/organization and/or dorm function
during NSO.

California State Laws

Students should be familiar with California laws governing the

consumption of alcohol. The following summarizes those laws most

relevant to individuals.

- It is illegal for persons under the age of 21 to possess an alcoholic
  beverage in any public place or any place open to the public (CA
  Business and Professions Code 25662).

- Any person who furnishes, gives or sells any alcoholic beverage
  to someone under the age of 21 is guilty of a misdemeanor (CA
  Business and Professions Code 25658(a)).

- Any person under the age of 21 who attempts to purchase an
  alcoholic beverage is guilty of an infraction (CA Business and
  Professions Code 25658.5).

- Any person under the influence of alcohol in a public place and
  unable to exercise care for one’s own safety or that of others is guilty
  of a misdemeanor (CA Penal Code 647(f)).

- It is illegal for persons to operate a motor vehicle while under the
  influence of alcohol or other intoxicants or with a blood alcohol level
  of .08% or higher (CA Vehicle Code Section 23152). NOTE: A golf cart
  is a motor vehicle.

- It is unlawful for a person under the age of 21 years who has 0.05
  percent or more, by weight, of alcohol in his or her blood to drive a
  vehicle (CA Vehicle Code Section 23140(a)).

- It is illegal for a person under the age of 21 to drive a vehicle when he
  or she has a blood alcohol concentration (BAC) of .01% or higher (CA
  Vehicle Code Section 23136).

- It is a misdemeanor to ride a bicycle under the influence of alcohol,
  drugs or both (CA Vehicle Code Section 21200.5).

- It is an infraction to possess an open container of an alcoholic
  beverage while in a motor vehicle (CA Vehicle Code Section 23223).

- It is an infraction for an owner or driver of a motor vehicle to allow
  an open container of alcohol in the passenger area (CA Vehicle Code
  Section 23225).

Age Discrimination Act of 1975

The following is the policy:

1. Policy

It is the policy of Stanford University to comply with the Age

Discrimination Act of 1975 and its regulations, which prohibit

unlawful discrimination on the basis of age. The Age Discrimination

Act Compliance Officer is the Director of the Diversity and Access

Office (”the Director”), who has been appointed to coordinate the

University’s efforts to comply with the law. Anyone who believes that

Stanford is not in compliance with the Age Discrimination Act and

its regulations ("the Act") should contact the Director at the Diversity

and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130,

Stanford, CA 94305-8550, (650) 723-0755 (voice), (650) 723-1791

(fax), equal.opportunity@stanford.edu (email).

2. Grievance Procedure

a. An individual who believes that Stanford is not acting in
  compliance with the Act and who wishes to file a grievance
  should set forth in writing the substance of his or her complaint,
  the grounds for it and the evidence on which it is based, and the
  efforts (if any) taken to date to resolve the matter. It is at this
  stage that the complaint becomes a formal grievance.

b. The grievance document should be submitted to the Director. A
  grievance should be filed in a timely fashion, i.e., normally no later
  than thirty days after the end of the academic quarter in which
  the action that is the subject of the grievance occurred. Except
  in extraordinary circumstances, delay in filing a grievance will be
  grounds for rejection of that grievance.

c. The Director will promptly initiate a review, which should normally
  be completed within sixty days. The Director may attempt to
  resolve the matter informally, and may refer the matter (or any
  part of it) to a grievance officer or other designee, who will look
  into and/or address the matter as the Director directs. The
  Director may also, in appropriate cases, remand the matter to the
  appropriate administrator (including to the administrative level at
  which the grievance arose) for further consideration.

d. In undertaking this review, either the Director, his or her designee,
  or the grievance officer may request a response to the issues
  raised in the grievance from any individuals believed to have
  information the reviewer considers relevant, including faculty,
  staff and students.

e. The Director (or his or her designee) will issue his or her decision
  in writing, and take steps to initiate such corrective action as is
  called for (if any).

3. Appeal

a. If the grievant is dissatisfied with the disposition by the Director
  (or his or her designee), he or she may appeal to the Provost
  (Office of the President and Provost, Building 10, Stanford, CA
  94305-2061; phone 650-725-4075, fax 650-725-1347). The appeal
  should be filed in writing with the Provost within ten days of the
  issuance of the decision by the Director (or his or her designee);
  a delay in filing the appeal may be grounds for rejection of that
  appeal.

b. The Provost may attempt to resolve the matter informally, and
  may refer the matter (or any part of it) to a grievance appeal
  officer, who will review the matter at the Provost’s direction. The
  Provost may also, in appropriate cases, remand the matter to the
appropriate administrator (including to the administrative level at which the grievance arose) for further consideration.

c. The Provost should normally complete his or her review of the appeal and issue his or her decision in writing within forty-five days. That decision is final.

a. Time Guidelines—The time frames set forth herein are guidelines. They may be extended by the Director or Provost, as applicable, in his or her discretion for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure.

b. No Retaliation—Stanford University prohibits retaliation or reprisals against individuals based on their pursuit in good faith of a grievance under this procedure, or their participation in good faith in the grievance process.

c. Standards for Review—If the grievance involves a decision that is being challenged, the review by the Director, as well as the review by the Provost on appeal, usually will be limited to the following considerations:

i. Were the proper facts and criteria brought to bear on the decision? Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

ii. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

iii. Given the proper facts, criteria, and procedures, was the decision one which a person in the position of the decision maker might reasonably have made?

### ADA (Americans with Disabilities Act)/Section 504 Grievance Procedure (Student)

#### ADA (Americans with Disabilities Act)/Section 504 Grievance Procedure (Student)

For information more generally concerning policies and procedures for students with disabilities, see the Diversity & Access Office (http://www.stanford.edu/dept/diversity/access) web site, or the ADA/Section 504 Compliance Officer, Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email); see also the Office for Accessible Education (OAE) (http://studentaffairs.stanford.edu/oaie) web site.

### Policy

The following is the policy:

#### I. Policy

Stanford University, in compliance with state and federal laws and regulations, including the Americans with Disabilities Act of 1990 (ADA; as amended 2008) and Section 504 of the Rehabilitation Act of 1973 (Section 504), does not discriminate on the basis of disability in administration of its education-related programs and activities, and has an institutional commitment to provide equal educational opportunities for disabled students who are otherwise qualified.

Students who believe they have been subjected to unlawful discrimination on the basis of disability, or have been denied access to services or accommodations required by law, have the right to use this grievance procedure.

#### II. Applicability

As a general proposition, the grievance procedure set forth below is applicable to undergraduate and graduate students of the University. In general, it is designed to address disputes concerning the following:

1. Disagreements regarding a requested service, accommodation, or modification of a University practice or requirement;
2. Inaccessibility of a program or activity;
3. Harassment or discrimination on the basis of disability;
4. Violation of privacy in the context of disability.

As a general proposition, this grievance procedure supplants the Student Academic Grievance Procedure (p. 75) and the Student Non-Academic Grievance Procedure (p. ) (both of which are set forth in this bulletin) for disability-related grievances. Questions of applicability will be decided by the Director of the Diversity and Access Office.

#### III. Compliance Officers

Stanford University’s Compliance Officers are responsible for administering this grievance procedure as well as ensuring compliance with applicable laws. The Director of the Diversity and Access Office is the designated ADA / Section 504 Compliance Officer. That office is located in Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

Additional Compliance Officers may be designated from time to time by the Provost from those faculty and staff members knowledgeable concerning disability issues and the legal mandates of state and federal disability statutes.

#### IV. Informal Resolution

Prior to initiating the formal complaint procedure set forth below, the student should, in general, first discuss the matter orally or in writing with the individual(s) most directly responsible. If no resolution results, or if direct contact is inappropriate under the circumstances, the student should then consult with the Compliance Officer at the Diversity and Access Office who will attempt to facilitate a resolution. (The informal resolution process may involve consultation with the Associate Vice Provost for Student and Academic Services and University Registrar.)

If the Compliance Officer is not successful in quickly achieving a satisfactory resolution (that is, generally within seven calendar days), the Compliance Officer will inform the student of his or her efforts and the student’s right to file a formal complaint.

#### V. Formal Complaint

If the procedure set forth above for informal resolution does not yield a successful resolution, then the student may file a formal complaint in the following manner:

1. When to File Complaint: Complaints must be filed as soon as possible, but in no event later than 10 days after the end of the quarter in which the concern arose.
2. What to File: A complaint must be in writing and include the following:
   a. The grievant’s name, address, email address and phone number;
   b. A full description of the problem;
   c. A description of what efforts have been made to resolve the issue informally;
   d. A statement of the remedy requested.
3. Where to File Complaint: the complaint is to be filed with the Compliance Officer at the Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

4. Notice of Receipt: upon receipt of the complaint, the Compliance Officer will promptly initiate an investigation and may refer the matter (or any part of it) to a grievance officer or designee, who will look into and/or address the matter as the Compliance Officer directs. In undertaking the investigation, the Compliance Officer or grievance officer may interview, consult with, and/or request a written response to the issues raised in the grievance from any individual the grievance officer believes to have relevant information, including faculty, staff, and students.

5. Investigation: the Compliance Officer will promptly initiate an investigation and may refer the matter (or any part of it) to a grievance officer or designee, who will look into and/or address the matter as the Compliance Officer directs. In undertaking the investigation, the Compliance Officer or grievance officer may interview, consult with, and/or request a written response to the issues raised in the grievance from any individual the grievance officer believes to have relevant information, including faculty, staff, and students.

6. Representation: the grievant and the party against whom the grievance is directed each have the right to have a representative. The party shall indicate whether he or she is to be assisted by a representative and, if so, the name of that representative. For purposes of this procedure, an attorney is not an appropriate representative.

7. Findings and Notification: upon completion of the investigation, the grievance officer will prepare and transmit to the student, and to the party against whom the grievance is directed, a final report containing a summary of the investigation, written findings, and a proposed disposition. This transmission will be expected within 60 calendar days of the filing of the formal complaint. The deadline may be extended by the Compliance Officer for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The final report may also be provided, where appropriate, to any University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Compliance Officer and, if appropriate, to the University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Provost for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The final report may also be provided, where appropriate, to any University officer whose authority will be needed to carry out the proposed disposition or to determine whether any personnel action is appropriate.

8. Final Disposition: the disposition proposed by the Compliance Officer will be put into effect promptly. The grievant or any party against whom the grievance or the proposed disposition is directed may appeal. The appeal to the Provost (as set forth below) will not suspend the implementation of the disposition proposed by the grievance officer, except in those circumstances where the Provost decides that good cause exists making the suspension of implementation appropriate.

VI. Urgent Matters
Whenever the application of any of the time deadlines or procedures set forth in this grievance procedure creates a problem due to the nature of the complaint, the urgency of the matter, or the proximity of the upcoming event, the Compliance Officer will, at the request of the grievant, determine whether an appropriate expedited procedure can be fashioned.

VII. Remedies
Possible remedies under this grievance procedure include corrective steps, actions to reverse the effects of discrimination or to end harassment, and measures to provide a reasonable accommodation or proper ongoing treatment. As stated above, a copy of the Compliance Officer’s report may, where appropriate, be sent to University officer(s) to determine whether any personnel action should be pursued.

VIII. Appeal
Within ten calendar days of the issuance of the final report, the grievant or the party against whom the grievance is directed may appeal to the Provost the grievance officer’s determination.

An appeal is taken by filing a written request for review with the Compliance Officer at the Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

The written request for review must specify the particular substantive and/or procedural basis for the appeal, and must be made on grounds other than general dissatisfaction with the proposed disposition. Furthermore, the appeal must be directed only to issues raised in the formal complaint as filed or to procedural errors in the conduct of the grievance procedure itself, and not to new issues.

The Compliance Officer will forward the appeal to the Provost, and also provide copies to the other party or parties. If the grievance involves a decision that is being challenged, the review by the Provost or his or her designee usually will be limited to the following considerations:

1. Were the proper facts and criteria brought to bear on the decision?
   Were improper or extraneous facts or criteria brought to bear that substantially affected the decision to the detriment of the grievant?

2. Were there any procedural irregularities that substantially affected the outcome of the matter to the detriment of the grievant?

3. Given the proper facts, criteria, and procedures, was the decision a reasonable one?

A copy of the Provost’s written decision will be expected within 30 calendar days of the filing of the appeal and will be sent to the parties, the Compliance Officer and, if appropriate, to the University officer whose authority will be needed to carry out the disposition. The deadline may be extended by the Provost for good cause (including for reasons relating to breaks in the academic calendar), and will nearly always be extended during summers and the winter closure. The decision of the Provost on the appeal is final.

Campus Disruptions

The Policy on Campus Disruptions was promulgated in 1967, and states that:

Policy

The following is quoted from the policy:

Because the rights of free speech and peaceable assembly are fundamental to the democratic process, Stanford firmly supports the rights of all members of the University community to express their views or to protest against actions and opinions with which they disagree.

All members of the University also share a concurrent obligation to maintain on the campus an atmosphere conducive to scholarly pursuits, to preserve the dignity and seriousness of University ceremonies and public exercises, and to respect the rights of all individuals.

The following regulations are intended to reconcile these objectives.

It is a violation of University policy for a member of the faculty, staff, or student body to:

1. prevent or disrupt the effective carrying out of a University function or approved activity, such as lectures, meetings, interviews, ceremonies, the conduct of University business in a University office, and public events.

2. obstruct the legitimate movement of any person about the campus or in any University building or facility.
Members of the faculty, staff, and student body have an obligation to leave a University building or facility when asked to do so in the furtherance of the above sections by a member of the University community acting in an official role and identifying himself or herself as such; members of the faculty, staff, or student body also have an obligation to identify themselves, when requested to do so by such a member of the University community who has reasonable grounds to believe that the person(s) has violated section (1) or (2) of this policy and who has so informed the person(s).

The policy has been applied to the following actions: refusal to leave a building which has been declared closed; obstructing the passage into or out of buildings by sitting in front of doorways; preventing University employees from entering their workplace; preventing members of a class from hearing a lecture or taking an examination, or preventing the instructor from giving a lecture, by means of shouts, interruptions, or chants; refusing to leave a closed meeting when unauthorized to attend; and intruding upon or refusing to leave a private interview.

It should be understood that while the above are examples of extraordinarily disruptive behavior, the application of the Policy also takes situational factors into consideration. Thus, for example, conduct appropriate at a political rally might constitute a violation of the Policy on Campus Disruption if it occurred within a classroom.

There is no "ordinary" penalty which attaches to violations of the Policy on Campus Disruption. In the past, infractions have led to penalties ranging from censure to expulsion. In each case, the gravity of the offense and prior conduct of the student are considered; however, the more serious the offense, the less it matters that a student has otherwise not done wrong.

**Campus Safety and Criminal Statistics**

**Computer and Network Usage**

**Computer and Network Usage**

For a complete text of the currently applicable version of this policy, see Administrative Guide Memo 6.2.1 Computer and Network Usage Policy (https://adminguide.stanford.edu/chapter-6/subchapter-2/policy-6-2-1).

**Policy**

The following is quoted from the policy:

Users of Stanford network and computer resources have a responsibility not to abuse the network and resources. This policy provides guidelines for the appropriate and inappropriate use of information technologies.

**Summary**

The following summarizes the policy on Computer and Network Usage:

In particular, the policy provides that users of University information resources must respect software copyrights and licenses, respect the integrity of computer-based information resources, refrain from seeking to gain or permitting others to gain unauthorized access, including by sharing passwords, and respect the rights of other computer users.

This policy covers appropriate use of computers, networks, and information contained therein. As to political, personal and commercial use, the University is a non-profit, tax-exempt organization and, as such, is subject to specific federal, state, and local laws regarding sources of income, political activities, use of property, and similar matters. It also is a contractor with government and other entities, and thus must assure proper use of property under its control and allocation of overhead and similar costs. For these reasons, University information resources must not be used for partisan political activities where prohibited by federal, state, or other applicable laws, and may be used for other political activities only when in compliance with federal, state, and other laws, and in compliance with applicable University policies. Similarly, University information resources should not be used for personal activities not related to appropriate University functions, except in a purely incidental manner. In addition, University information resources should not be used for commercial purposes, except in a purely incidental manner or except as permitted under other written policies of the University or with the written approval of a University officer having the authority to give such approval. Any such commercial use should be properly related to University activities, take into account proper cost allocations for government and other overhead determinations, and provide for appropriate reimbursement to the University for taxes and other costs the University may incur by reason of the commercial use. Users also are reminded that the .edu domain on the Internet has rules restricting or prohibiting commercial use, and thus activities not appropriately within the .edu domain and which otherwise are permissible within the University computing resources should use one or more other domains, as appropriate.

The University's Information Security Officer is authorized in appropriate circumstances to inspect or monitor private data (including email), such as when there is a reasonable cause to suspect improper use of computer or network resources.

For further information on the topic of peer-to-peer file sharing, see the section above on Copyright.

**Copyright**

**Copyright**

Copyright laws protect original works of authorship and give the owners of copyrights the exclusive right to do and to authorize others to do certain things in regard to a copyrighted work, including: make copies, distribute the work, display or perform the work publicly, and create derivative works. Copyright laws apply to nearly all forms of captured content, including traditional works like books, photographs, music, drama and sculpture. The laws also adapt to changes in technologies, and include in their scope modern forms of works like motion pictures, web sites, electronic media, software, multimedia works and some databases. Registration is not required to obtain a copyright, so if in doubt, assume a copyright applies.

Unless an exception to the copyright owner’s exclusive rights applies, you must obtain permission from the copyright owner to copy, distribute, display or perform a copyrighted work in any medium for any purpose. Be especially mindful of copyright principles when using the Internet. Just because a work is posted on the Internet does not mean that the owner of the copyright has given you permission to use it. In general, do not post material onto the Internet without copyright clearance.

Stanford University Libraries have licenses with many publishers, which permit copying of materials in accordance with the educational, research or administrative functions of the University. In addition, there are four major exceptions to the copyright owner's exclusive rights, which (if applicable) permit limited use without permission. These are: the fair use
exception, the library exception, the face-to-face teaching exception, and the distance-learning exception. For a more detailed explanation of these exceptions, the copyright laws and Stanford’s copyright policies, please review the University’s Copyright Reminder (http://www-sul.stanford.edu/libraries/collections/copyright_reminders) web site. It is each person’s responsibility to be aware of and abide by copyright law; violation may result in civil or criminal liability, and constitutes grounds for University discipline, up to and including discharge, dismissal and expulsion.

Dangerous Weapons on Campus

Prohibition of the Possession of Dangerous Weapons on Campus

Policy

Prohibition of the Possession of Dangerous Weapons on Campus

Policy

Stanford University prohibits the possession of any of the following weapons on the Stanford campus: firearm, dirk, dagger, ice pick, knife having a blade longer than 2 1/2 inches (except for lawful use in food preparation or consumption), folding knife with a blade that locks into place, razor with an unguarded blade, taser, stun gun, instrument that expels a metallic projectile (such as a BB or a pellet), spot marker gun, or any other weapons prohibited by California Penal Code Sections 626.10 and 626.9.

For purposes of this policy, the term “Stanford campus” shall include all the lands, buildings, and facilities of Leland Stanford Junior University, whether owned, leased, and controlled, and whether located in the United States or abroad (excluding the privately owned, managed, or leased residences of faculty or staff that are located on the main Stanford campus in unincorporated Santa Clara County). In addition to the prohibited weapons, ammunition is not allowed to be stored or possessed in university owned, leased, and controlled buildings (excluding the privately owned, managed, or leased residences of faculty or staff that are located on the main Stanford campus in unincorporated Santa Clara County). In the event a federal or state law or a county ordinance is more restrictive than this policy, federal or state law or the county ordinance shall apply.

Requests for an exemption from this policy for academic purposes may be requested in writing to the Director of the Stanford University Department of Public Safety. Each request will be considered on a case-by-case basis and be evaluated by the Office of Risk Management and the Department of Public Safety. A written letter will be provided by the Director of the Department of Public Safety in the event an exemption is granted.

The Stanford University Department of Public Safety does not provide facilities for the storage of firearms.

Domestic Partners

Domestic Partners

In October 1990, Stanford University adopted a domestic partners policy. This policy, which implements the University’s nondiscrimination policy, makes services that have historically been available to married students available on an equal basis to students with same-sex or opposite-sex domestic partners. These services include access to student housing, a courtesy card that provides access to University facilities, and the ability to purchase medical care at Vaden Health Service. A domestic partnership is defined as an established long-term partnership with an exclusive mutual commitment in which the partners share the necessities of life and ongoing responsibility for their common welfare.

Grievances

Grievances

A Stanford undergraduate or graduate student who believes that he or she has been subject to an improper decision on an academic matter may file a grievance pursuant to the Student Academic Grievance Procedure (p. 75). For other types of grievances, students should review the section that follows on the Student Non-Academic Grievance Procedure (p. 104), and consult concerning applicable procedures with the Director of the Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email).

An individual whose matter has been substantially addressed through one of Stanford’s grievance procedures (including but not limited to the Student Academic Grievance Procedure, the Student ADA/Section 504 Grievance Procedure, the Grievance Resolution Procedure for Postdoctoral Scholars, the Student-Athlete Grievance Procedure, or the Student Non-Academic Grievance Procedure) may not raise and seek redress of the same matter under a different Stanford grievance procedure. The University retains discretion to determine when a matter has been substantially addressed.

California Dept of Consumer Affairs Complaint Procedure

An individual may contact the Bureau for Private Postsecondary Education for review of a complaint. The bureau may be contacted online (http://www.bppe.ca.gov) or at 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833; phone: (916) 431-6924; fax: (916) 263-1897.

Hazing Policy

Hazing Policy

Hazing is not permitted at Stanford University. No individual, recognized student organization, club, team, or any other Stanford-affiliated student group is permitted to plan, engage in, or condone hazing, on or off the Stanford campus.

Definition of Hazing at Stanford University

Hazing includes any activity done in connection with a student organization, regardless of whether the organization is officially recognized at Stanford, that causes or is reasonably likely to cause another student to suffer bodily danger, physical harm, or significant personal degradation or humiliation, even if no bodily danger, physical harm, or significant degradation or humiliation in fact results. Hazing might occur during initiation or pre-initiation into a student organization, but is not limited to these time frames. Any individual who plans or intentionally assists in hazing activity has engaged in hazing, regardless of whether that individual is present when the hazing activity occurs.
Consequences of a Violation

Stanford University expects its students to conduct themselves in socially responsible and respectful ways. Thus, participation in hazing, either as an individual or as part of any student group, may result in serious individual and organizational consequences including, but not limited to: disciplinary action up to and including expulsion; permanent loss of organizational recognition; and loss of eligibility to remain a member of any club, team, or other Stanford-affiliated student group. Consent, implied or expressed, is not a defense to any complaint or charge alleging a hazing violation.

A number of University offices may take institutional action, including: the Organizational Conduct Board; Office of Community Standards; or other University offices, such as the Vice Provost for Student Affairs or the Department of Athletics.

Applications

Stanford’s hazing policy is distinct from and broader than California Penal Code section 245.6, which prohibits: “any method of initiation or pre-initiation into a student organization or student body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury to any former, current, or prospective student of any school, community college, college, university or other educational institution in this state.” A violation of Penal Code Section 245.6 that does not result in serious bodily injury is punishable as a misdemeanor, while a violation that results in death or injury is punishable as a felony or a misdemeanor.

Nothing in this hazing policy prevents Stanford from taking institutional action against hazing activity that falls outside the narrower definition of Penal Code section 245.6.

Stanford’s hazing policy is not intended to prohibit student recruitment or new or continuing member activities that are positive and educational in nature, designed to instill a group ethos or unity. Its intent is to deter those behaviors that cause or are likely to cause danger, harm or humiliation to another student.

Stanford’s hazing policy is not intended to apply to customary athletic events or other similar institutionally-approved contests or competitions.

Questions regarding hazing policies related to fraternities and sororities should be directed to the Office of Fraternity and Sorority Life at (650) 723-0778. For all other student groups, contact Student Activities and Leadership at (650) 723-2445.

Main Quadrangle • Memorial Court • Oval • White Plaza

Use of the Main Quadrangle and Memorial Court

Policy

The following is quoted from the policy:

The Main Quadrangle and Memorial Court are part of Stanford University’s academic preserve due to their locations at the heart of the campus. To protect and enhance their historic status, University policy limits activities primarily to established or traditional ceremonies and events.

To schedule an event, approval must be obtained in advance from the Office of Stanford Events (see below). Unscheduled events, protests, or activities are prohibited.

Requests for waivers to this policy must be submitted in advance and in writing to the Office of Stanford Events. Exceptions may be granted only in extraordinary cases.

Resources

The following is a summary of resources available:

For instructions on use of the Main Quadrangle/Memorial Court, contact the Office of Special Events and Protocol at (650) 724-1387, or at the OSEP (https://osep.stanford.edu) web site.

Note: White Plaza is made available to Stanford students, faculty, and staff for events other than scheduled “established or traditional ceremonies and events” including those that may involve amplified sound. For further information on the use of such other venues, students should contact Student Activities and Leadership (SAL) at (650) 723-2733, or at the SAL (http://studentaffairs.stanford.edu/sal) web site. Faculty and staff should contact the Office of Special Events and Protocol (OSEP) (https://osep.stanford.edu).

Oval Policy

The Oval is considered to be the initial and official visual entrance to the Stanford University campus. Given this historic and aesthetic status, it is in the best interests of the University community and visiting members of the public to maintain its open and pristine space, to help preserve its natural beauty and environmental integrity. The Oval also presents the formal academic image of the University, leading directly to departments, classrooms and other academic space, and faculty and graduate student offices, and thus is subject to the University’s Noise Policy.

The University prohibits formal or informal events of any kind to take place in the Oval. Gatherings of Stanford students, faculty, and staff such as demonstrations, rallies, or dances may take place in White Plaza, which can be reserved through the Office of Student Activities. Weddings also are not allowed in the Oval but are in certain circumstances allowed in Memorial Church (refer to Memorial Church wedding ceremony guidelines (http://www.stanford.edu/group/religiouslife/servicesWeddings.html)).

The Oval is considered a pedestrian zone and appropriate use of its space includes walking, running, reading, relaxing, and other limited recreational use of the lawn area (such as quiet, very small picnics and Frisbee), unless or until such use damages or otherwise harms the property.

Cooking food or use of any grill/barbecue or open flame is strictly prohibited. Fireworks or the use of other incendiary devices represent a safety hazard to the area and are therefore prohibited. Amplified sound from items such as boom boxes, musical instruments, or the use of bullhorns or amplified speakers is also prohibited. Only authorized Stanford service vehicles are permitted inside the Oval areas.

As the official entrance to the University, the Oval offers public access to general parking spaces in the marked areas surrounding the outer perimeter of the Oval; drivers are expected to obey all traffic signs and limitations. Buses are subject to additional restrictions.

For further information regarding this policy, contact the Executive Director of Special Events and Protocol, 724-1387 or see the Office of Special Events & Protocol (http://osep.stanford.edu/policies/oval.html) web site.

White Memorial Plaza

White Plaza is a Stanford University space available for programs, speeches, rallies, information tables, banners and posters. It is considered a “free speech area” on campus. Students should follow the policy outlined on the Student Activities and Leadership (https://sal.stanford.edu/plan-event/venues/outdoor-spaces/white-memorial-
plaza) web site to engage in student programmatic activity. Due to Stanford's non-profit status, for-profit commercial activity or corporate promotion of any kind is strictly regulated.

White Plaza is in the center of campus, so event planners should take particular care to avoid disruptive impact on classes, business, or events in the surrounding buildings. Events in White Plaza must be organized by University entities (student groups, departments, and programs) and require prior approval from Stanford Activities and Leadership (SAL) (https://sall.stanford.edu).

**Nonacademic Regulations**

**Under Construction**

**Online Accessibility Policy**

**Stanford University Online Accessibility Policy**

**Policy**

Stanford University will make Stanford Websites and web-based applications accessible to its students, faculty, staff and participants in the University's programs and activities who have disabilities. All personnel who are involved in the procurement, preparation and maintenance of University Websites and web-based applications should adopt this goal, with the assistance of campus resources dedicated to supporting web accessibility. Stanford Websites and web-based applications must either conform to WCAG 2.0 Level AA (http://www.w3.org/TR/WCAG20) or their content and functionality be made available to Users on request (such as by a student request to the Office of Accessible Education) in an equally effective and accessible alternative manner.

**Applicability**

Stanford's online accessibility policy applies to all Stanford academic and administrative units that create and maintain web sites and web-based applications used in the programs and activities of the University. See the Stanford University Online Accessibility Policy (http://ucomm.stanford.edu/policies/accessibility-policy) web site for the full policy.

**Definitions**

**Stanford Website**

Any website or web-based application within the Stanford University (stanford.edu) domain used in the programs or activities of the University.

**Users**

Stanford Website users are defined as current Stanford students and applicants for admission, Stanford staff and faculty, and participants in the University's programs and activities.

**Accessible**

Refers to the concept that people with disabilities are able to independently and timely access and use a product or system, including with the benefit of assistive technologies. Assistive technologies include adaptive hardware and/or software and other devices that are used to increase, maintain, or improve the functional capabilities of individuals with disabilities.

**Stanford Online Accessibility Program (“SOAP”) Office**

The SOAP Office (http://soap.stanford.edu) provides resources and services for Stanford web designers, developers and content creators to assist them in producing accessible materials. Services include Website accessibility testing and guidance regarding universal design and web standards compliance. The SOAP Office is also the campus resource designated to facilitate online accessibility for Users. To report and seek assistance on web accessibility issues, Users may contact the SOAP Office by email at web-accessibility@stanford.edu or submit a HelpSU ticket through the SOAP Office website.

**Office of Accessible Education (“OAE”)**

The Office of Accessible Education (http://oae.stanford.edu) is the campus office designated to work with Stanford students with disabilities. OAE provides support services, accommodations, and programs to remove barriers to full participation of students with disabilities in the programs or activities of the University.

**Diversity and Access Office (“D&A”)**

The Diversity and Access Office (http://diversityandaccesstanford.edu) oversees compliance with state and federal anti-discrimination laws including the Americans with Disabilities Act and Section 504 of the Rehabilitation Act. D&A provides disability-related access information, and assists faculty, staff and other non-student participants in University programs and activities with disabilities who may need accommodations and/or auxiliary aids to obtain equal access to Stanford facilities, programs and activities. D&A also oversees the ADA/Section 504 Grievance Procedure for students who believe they have been subjected to unlawful discrimination based on a disability or denied access to services or accommodations which the ADA and/or Section 504 require Stanford to provide. Read more about the ADA/Section 504 Grievance Procedure (p. ).

**Accessibility Standard**

Stanford University has adopted the Worldwide Web Consortium Web Content Accessibility Guidelines (http://www.w3.org/TR/WCAG20) version 2.0, Level AA Conformance (WCAG 2.0 Level AA) as its goal for accessible Stanford Websites. The guidelines and success criteria of WCAG 2.0 Level AA are organized around the following four principles which lay the foundation for users with disabilities to access and use web content. For a Stanford Website to be accessible under these principles, its content must be:

1. **Perceivable** – Information and user interface components must be presentable to users in ways they can perceive.
2. **Operable** – User interface components and navigation must be operable.
3. **Understandable** – Information and the operation of user interface must be understandable.
4. **Robust** – Content must be robust enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies.

**Implementation Guidelines**

1. All personnel responsible for existing Stanford Websites must use good faith efforts, subject to the requirements and exceptions of the applicable laws, to bring those Websites into conformance with WCAG Level 2.0 AA.
2. New Stanford Website development and purchases, including development and purchases for major revisions and updates of existing Stanford Websites, should conform to WCAG 2.0 Level AA.
3. Vendors seeking to develop or provide Websites or web-based applications for Stanford are to demonstrate that their products satisfy WCAG 2.0 Level AA Success Criteria, unless undue burden...
or fundamental alteration can be demonstrated (see below). Preferred standards for demonstrating satisfaction of WCAG 2.0 Level AA Success Criteria, and accessibility language for Stanford Website vendor contracts, as well as for other types of Electronic Information Technology vendor contracts, may be obtained from University Procurement (Purchasing and Payment Services) (http://web.stanford.edu/group/fms/fingate/contact#procure) or from the SOAP Office (https://soap.stanford.edu).

4. Each Stanford Website should contain "Accessibility" contact information for the site's webmaster and/or the SOAP Office. The contact information may take a variety of forms, such as an email address, a link to a HelpSU page, or a contact form on the site. The recommended location for this information is the Website's “Contact” or “About Us” page.

5. The SOAP Office will continue to test Stanford Websites for accessibility and report accessibility issues to the webmaster for that website.

6. OAE will continue to seek input from Stanford students regarding accessibility issues.

7. Conformance to WCAG 2.0 Level AA guidelines may be an undue burden due to the nature of the content, the purpose of the resource, the lack of accessible solutions, or an unreasonably high administrative or financial cost necessary to make the resource meet that goal. However, these difficulties do not relieve University programs or activities from meeting applicable legal obligations to provide reasonable accommodations to Users in regard to access to the content and services provided on Stanford Websites. Managers of University programs and activities must be prepared to provide content and/or services in a suitable alternative format (e.g., electronic text file or audio description) or manner upon request (such as by a student to the OAE).

Implementation Assistance
Guidelines and best practices are available from the SOAP Office (http://soap.stanford.edu). In addition, on-campus assistance is available for designing and implementing websites that meet accessibility guidelines and for evaluating the accessibility of existing sites and those under development. If such assistance is needed, visit the SOAP web site (http://soap.stanford.edu) or email the SOAP Office at web-accessibility@stanford.edu.

Responding to Accessibility Issues
Recognizing the ongoing evolution of current web content and technologies, the designated webmaster for a particular site, upon being made aware of an accessibility issue on that site, should proceed as follows:

- Acknowledge receipt of the issue in writing (via email) to the User raising the issue, with a copy to the SOAP Office.
- Open an accessibility case for recording the issue and resulting action taken.
- Verify that the issue is an authentic accessibility issue.
- Treat all issues as important. Address any time-sensitive need of the User promptly (generally within a period of no greater than two business days), unless technology or work involved requires more effort, in which case the User will be promptly notified in writing of expected delivery.

Upon receiving a report of an accessibility issue, the SOAP Office shall notify the site’s webmaster, as well as OAE (for reports from students) or D&A (for reports from non-students.) If the SOAP Office, in consultation with the site’s webmaster, determines that the information or service provided on the Stanford Website cannot be made accessible, or that doing so would constitute an undue burden or fundamental alteration, OAE or D&A will engage in an interactive process with the User about alternative methods for providing the information or service and will provide an equally effective alternative format or service. In the event that an alternative format or service cannot be provided or the user is not satisfied with the results, he or she may contact the ADA/Section 504 Compliance Officer at D&A by telephone at (650) 723-0755 or by email at equalopportunity@stanford.edu for assistance in resolving the issue.

For questions about the policy, please contact the SOAP Office (https://soap.stanford.edu/about/contact).

Peer-to-Peer File Sharing

Peer-to-Peer File Sharing
The use of file-sharing networks and software to download and share copyrighted works like software, music, movies, television programs, and books can violate copyright laws. Both the person who makes an illegal copy of a copyrighted work available and the person who receives or downloads an illegal copy have violated the law and Stanford policies. Many file-sharing programs have default settings that share copyrighted files, such as music and movies, through the Internet. Before enabling any of these programs students, faculty, or staff must read the fine print, make sure to understand the program itself, and only use such programs lawfully. Under the Digital Millennium Copyright Act (DMCA), copyright owners are entitled to notify Internet service providers, such as Stanford, that IP addresses linked to the Stanford network are sharing copies of music, movies, or other content without authorization. The law requires the University to respond to such complaints by eliminating access to the infringing materials. Stanford will disconnect students who fail to respond to a DMCA complaint promptly. Furthermore, the University also will suspend or terminate computer access to the Stanford network, including termination of the SUNet ID, to members of the community who continue to violate copyright laws. Finally, the University will take action through the student, employee, or faculty disciplinary processes if necessary. Beyond University consequences, copyright holders may file civil lawsuits against copyright infringers seeking extensive monetary damages. If compelled by a lawful subpoena, Stanford may be required to identify students, faculty, staff, or others who have violated copyright law. For more information about file-sharing, refer to Residential Computing’s online resource, File-Sharing and Copyright Law (http://rescomp.stanford.edu/info/dmca) web site.

Protection of Sensitive Data

Protection of Sensitive Data
Political Activities

**Political Activities**

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 1.5.1 Political Activities (https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-1).

**Summary**

The following summarizes the policy on Political Activities:

Stanford University, as a charitable entity, is subject to federal, state, and local laws and regulations regarding political activities: campaign activities, lobbying, and the giving of gifts to public officials.

While all members of the University community are naturally free to express their political opinions and engage in political activities to whatever extent they wish, it is very important that they do so only in their individual capacities and avoid even the appearance that they are speaking or acting for the University in political matters.

In the limited circumstances where individuals must speak or act on behalf of the University in the political arena, they must do so in accordance with the provisions of this Guide Memo.

**Policy**

The following is quoted from the policy:

1. **Summary of Legal Requirements and Restrictions**
   a. Campaign Activities: contributions of money, goods, or services to candidates for political office and in support of or opposition to ballot measure campaigns are subject to a wide variety of political laws. Depending on the jurisdiction and the campaign, political contributions may be prohibited or limited and, in nearly all cases, are subject to a complicated series of disclosure rules. Because of the University's tax-exempt status, the University is legally prohibited from endorsing candidates for political office or making any contribution of money, goods, or services to candidates. It is important, therefore, that no person inadvertently cause the University to make such a contribution.
   
   b. Lobbying: lobbying can generally be described as any attempt to influence the action of any legislative body (for example, Congress, state legislatures, county boards, city councils, and their staffs) or any federal, state, or local government agency. Laws regulating lobbying exist at the federal, state, and local levels but can differ widely in scope, depending on the jurisdiction. Some laws, for example, only regulate lobbying of the legislative branch. Others, however, also cover lobbying of administrative agencies and officers in the executive branch (for example, lobbying for federally-funded grants). To one degree or another, however, most lobbying laws require registration and reporting by individuals engaged in attempts to influence governmental action.

   Tax-exempt organizations are permitted to lobby, and the University engages in lobbying on a limited number of issues, mostly those affecting education, research, and related activities. There is usually some threshold of time or money spent on lobbying that triggers registration and reporting requirements. Regardless of thresholds, however, no University employee—other than the following individuals, on matters under their jurisdiction—may lobby on behalf of the University without specific authorization:

   • President
   
   • Provost
   
   • Deans of the Seven Schools
   
   • Vice Provost and Dean of Research
   
   • Vice President for Business Affairs and Chief Financial Officer
   
   • Executive Director of Human Resources
   
   • Director of the Stanford Linear Accelerator Center
   
   • Director of the Hoover Institution
   
   • General Counsel
   
   • Vice President for Public Affairs

   The Vice Provost and Dean of Research may grant permission to faculty members to lobby on behalf of the University for specific purposes. The Director of Government and Community Relations may grant permission to staff members to lobby on behalf of the University for specific purposes. All lobbying on behalf of the University should be coordinated with the Director of Government and Community Relations.

   c. Giving of Gifts to Public Officials and Staff: almost all jurisdictions have strict rules on the extent to which gifts and honoraria may be given to public officials (both elected and non-elected officials and, often, staff). In some cases gifts and honoraria are prohibited; in others they are limited; and in most cases they are subject to detailed disclosure. In addition, in some jurisdictions such as California, gifts to both state and local public officials can result in a public official's disqualification from participation in any governmental action affecting the interests of the donor. Meals, travel, and entertainment are the most common types of gifts, but gift rules can also apply in cases where public officials attend a reception or receive tickets to sporting or other events.

   As a non-profit organization, the University generally does not give gifts to public officials and, in those limited cases where it does give such gifts, it must do so in accordance with all applicable laws and regulations. Therefore, any University employee who, on behalf of the University, wishes to make a gift to a public official must receive prior approval from the Director of Government and Community Relations before making such a gift.

   d. Reporting of Political Activities: the University must report most of its political activities above certain thresholds. Therefore, any University employee engaging in such activities on behalf of the University should carefully review the remainder of this Guide Memo and should discuss the relevant activities in advance with the Director of Government and Community Relations.

2. **Prohibited and Restricted Political Activities**
   a. In General:

   i. No person may, on behalf of the University, engage in any political activity in support of or opposition to any candidate for elective public office (including giving or receiving funds or endorsements), nor shall any University resources be used for such purpose.

   ii. No person may, on behalf of the University, lobby (or use University resources to lobby) any federal, state, or local legislative or administrative official or staff member unless specifically authorized to do so. Any lobbying activity, even when authorized, must be conducted in compliance with
3. Permissible Activities

a. In General: as noted above, the federal, state, and local laws
which limit the partisan political activities that can take place in
University facilities and with University support in no way inhibit
the expression of personal political views by any individual in the
University community. Nor do they forbid faculty, students, or
staff from joining with others in support of candidates for office
or in furtherance of political causes. There is no restriction on
discussion of political issues or teaching of political techniques.
Academic endeavors which address public policy issues are in no
way affected.

b. Guidelines for Avoiding Prohibited Partisan Political Activities: the
following guidelines should assist in preventing the involvement
or apparent involvement of the University in political activities
in support of or opposition to any candidate for elective public
office, that is, partisan political activities. Except in the limited
circumstances set forth in section 3.b., below:

i Use of Name and Seal: neither the name nor seal of the University
or of any of its schools, departments, or
institutions should be used on letters or other materials
intended for partisan political purposes.

ii Use of Address and Telephones: no University office should
be used as a return mailing address for partisan political
mailings, and telephone service that is paid by the University,
likewise, should not be used for partisan political purposes.
(Obviously, a student’s dormitory room and telephone service
that are personal to the student may be used for these
purposes.)

iii Use of Title: the University title of a faculty or staff member or
other person should be used only for identification and should
be accompanied by a statement that the person is speaking
as an individual and not as a representative of the University.

iv Use of Services and Equipment: University services, such
as Interdepartmental Mail; equipment, such as duplicating
machines, computers, and telephones; and supplies should
not be used for partisan political purposes.

v Use of Personnel: no University employee may, as part of his
or her job, be requested to perform tasks in any way related to
partisan political purposes.

Because the University encourages freedom of expression,
political activities which do not reasonably imply University
involvement or identification may be undertaken so long as
regular University procedures are followed for use of facilities.
Examples of permissible activities are:

i Use of areas, such as White Plaza, for tables, speeches, and
similar activities.

ii Use of auditoriums for speeches by political candidates,
but subject to rules of the Internal Revenue Service, the
Federal Election Commission, and the California Fair
Political Practices Commission, and other applicable laws.
Arrangements must be made with University Events and
Services. (See also Guide Memo 82.1, Public Events (http://
adminguide.stanford.edu/82_1.pdf), for more information.)

To reiterate, because tax and political compliance laws
impose restrictions, and even prohibitions, on certain political
activities and on the use of buildings and equipment at a non-
profit institution such as the University, any such activities
must be in compliance with these legal requirements.
Individuals taking political positions for themselves or groups
with which they are associated, but not as representatives of
the University, should clearly indicate, by words and actions,
that their positions are not those of the University and are not
being taken in an official capacity on behalf of the University.

b. Limited University Political Activities: limited activities relating
to specific federal, state, or local legislation or ballot initiatives
are permissible where (1) the subject matter is directly related
to core interests of the University’s activities; (2) the President
has determined that the University should take a position; and (3)
the individuals who speak or write on the University’s behalf are
specifically authorized to do so.

4. Research Involving Political Campaigns: Any Stanford researcher
considering doing research involving political campaigns should
consult with the General Counsel’s Office for any legal restrictions,
and should submit the research proposal in advance to Stanford’s
Institutional Review Board as appropriate under its policies and
procedures.

5. Responsibility for Interpretation: the Director of Government and
Community Relations, in consultation with the General Counsel, is the
administrative officer responsible for interpretation and application
of the above guidelines. Questions on whether planned student
activities are consistent with the University’s obligations should be
directed to the Dean of Students, who will consult with the Director
of Government and Community Relations and/or the General Counsel.
All other questions on whether planned activities are consistent
with the University’s obligations should be addressed directly to the
Director of Government and Community Relations or the General
Counsel.

Recording Lectures

Recording Lectures

Except with permission from the Office of Accessible Education (http://
studentaffairs.stanford.edu/oea) or the instructor in question, students
may not audio- or video-record lectures. Even with permission, students
may only use such recordings for personal use; no posting or further
distribution or use is permitted.
Sexual Harassment and Consensual Sexual or Romantic Relationships

Sexual Harassment and Consensual Sexual or Romantic Relationships

For the complete text of the currently applicable version of this policy, see Administrative Guide Memo 2.2.4 Sexual Harassment and Consensual Sexual or Romantic Relationships (https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2.2.4). It is also available from the Sexual Harassment Policy Office (http://harass.stanford.edu) homepage.

Summary

Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.

Policy

The following is quoted from the policy:

1. In General

a. Applicability and Sanctions for Policy Violations—This policy applies to all students, faculty and staff of Stanford University, as well as to others who participate in Stanford programs and activities. Its application includes Stanford programs and activities both on and off-campus, including overseas programs. Individuals who violate this policy are subject to discipline up to and including discharge, expulsion, and/or other appropriate sanction or action.

b. Respect for Each Other—Stanford University strives to provide a place of work and study free of sexual harassment, intimidation or exploitation. It is expected that students, faculty and staff and other individuals covered by this policy will treat one another with respect.

c. Prompt Attention—Reports of sexual harassment are taken seriously and will be dealt with promptly. The specific action taken in any particular case depends on the nature and gravity of the conduct reported, and may include intervention, mediation, investigation and the initiation of grievance and disciplinary processes as discussed more fully below. Where sexual harassment is found to have occurred, the University will act to stop the harassment, prevent its recurrence, and discipline and/or take other appropriate action against those responsible.

d. Confidentiality—The University recognizes that confidentiality is important. Sexual harassment advisers and others responsible to implement this policy will respect the confidentiality and privacy of individuals reporting or accused of sexual harassment to the extent reasonably possible. Examples of situations where confidentiality cannot be maintained include circumstances when the University is required by law to disclose information (such as in response to legal process) and when disclosure is required by the University's outweighing interest in protecting the rights of others.

e. Protection Against Retaliation—Retaliation and/or reprisals against an individual who in good faith reports or provides information in an investigation about behavior that may violate this policy are against the law and will not be tolerated.

Intentionally making a false report or providing false information, however, is grounds for discipline.

f. Relationship to Freedom of Expression—Stanford is committed to the principles of free inquiry and free expression. Vigorous discussion and debate are fundamental to the University, and this policy is not intended to stifle teaching methods or freedom of expression generally, nor will it be permitted to do so. Sexual harassment, however, is neither legally protected expression nor the proper exercise of academic freedom; it compromises the integrity of the University, its tradition of intellectual freedom and the trust placed in its members.

2. What Is Sexual Harassment?

Unwelcome sexual advances, requests for sexual favors, and other visual, verbal or physical conduct of a sexual nature constitute sexual harassment when:

a. It is implicitly or explicitly suggested that submission to or rejection of the conduct will be a factor in academic or employment decisions or evaluations, or permission to participate in a University activity; or

b. The conduct has the purpose or effect of unreasonably interfering with an individual's academic or work performance or creating an intimidating or hostile academic, work or student living environment.

Determining what constitutes sexual harassment depends upon the specific facts and the context in which the conduct occurs. Sexual harassment may take many forms—subtle and indirect, or blatant and overt. For example,

i. It may be conduct toward an individual of the opposite sex or the same sex.

ii. It may occur between peers or between individuals in a hierarchical relationship.

iii. It may be aimed at coercing an individual to participate in an unwanted sexual relationship or it may have the effect of causing an individual to change behavior or work performance.

iv. It may consist of repeated actions or may even arise from a single incident if sufficiently egregious.

c. The University's Policy on Sexual Assault (see Guide Memo 23.3, Sexual Assault (http://adminguide.stanford.edu/23_3.pdf)) may also apply when sexual harassment involves physical contact.

3. What To Do About Sexual Harassment

Individuals seeking further information are directed to the following resources:

• The Sexual Harassment Policy Office (Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu for information, consultation, advice, or to lodge a complaint. Note that anonymous inquiries can be made to the SHPO by phone during business hours.

• Any designated Sexual Harassment Adviser or resource person listed in 3.a or 5.a.
The following are the primary methods for dealing with sexual harassment at Stanford. They are not required to be followed in any specific order. However, early informal methods are often effective in correcting questionable behavior.

a. Consultation—Consultation about sexual harassment is available from the Sexual Harassment Policy Office, Sexual Harassment Advisers (including residence deans), human resources officers, employee relations specialists, counselors at Counseling and Psychological Services (CAPS) or the Help Center, chaplains at Memorial Church, ombudspersons and others. A current list of Sexual Harassment Advisers is available from the Sexual Harassment Policy Office and at http://harass.stanford.edu/ SHadvisers.html. Consultation is available for anyone who wants to discuss issues related to sexual harassment, whether or not “harassment” actually has occurred, and whether the person seeking information is a complainant, a person who believes his or her own actions may be the subject of criticism (even if unwarranted), or a third party.

Often there is a desire that a consultation be confidential or “off the record.” This can usually be achieved when individuals discuss concerns about sexual harassment without identifying the other persons involved, and sometimes even without identifying themselves. Confidential consultations about sexual harassment also may be available from persons who, by law, have special professional status, such as:

i. Counselors at Counseling and Psychological Services (CAPS), http://caps.stanford.edu
iii. Chaplains at Memorial Church
iv. The University Ombudsperson, http://www.stanford.edu/dept/ombuds

In these latter cases, the level of confidentiality depends on what legal protections are held by the specific persons receiving the information and should be addressed with them before specific facts are disclosed. For more information see http://harass.stanford.edu/confidential.html.

For further information on confidentiality, see Section 1(d) above.

b. Direct Communication—An individual may act on concerns about sexual harassment directly, by addressing the other party in person or writing a letter describing the unwelcome behavior and its effect and stating that the behavior must stop. A Sexual Harassment Adviser can help the individual plan what to say or write, and likewise can counsel persons who receive such communications. Reprisals against an individual who in good faith initiates such a communication violate this policy.

c. Third Party Intervention—Depending on the circumstances, third party intervention in the workplace, student residence or academic setting may be attempted. Third party intervenors may be the Sexual Harassment Advisers, human resources professionals, the ombudspersons, other faculty or staff, or sometimes mediators unrelated to the University.

When third party intervention is used, typically the third party (or third parties) will meet privately with each of the persons involved, try to clarify their perceptions and attempt to develop a mutually acceptable understanding that can insure that the parties are comfortable with their future interactions. Other processes, such as a mediated discussion among the parties or with a supervisor, may also be explored in appropriate cases.

Possible outcomes of third party intervention include explicit agreements about future conduct, changes in workplace assignments, substitution of one class for another, or other relief, where appropriate.

d. Formal Grievance, Appeal, and Disciplinary Processes—Grievance, appeal, or disciplinary processes may be pursued as applicable.

i. Grievances and Appeals—The applicable procedure depends on the circumstances and the status of the person bringing the charge and the person against whom the charge is brought. Generally, the process consists of the individual’s submission of a written statement, a process of fact-finding or investigation by a University representative, followed by a decision and, in some cases, the possibility of one or more appeals, usually to Stanford administrative officers at higher levels. The relevant procedure (see below) should be read carefully, since the procedures vary considerably.

If the identified University fact-finder or grievance officer has a conflict of interest, an alternate will be arranged, and the Director of the Sexual Harassment Policy Office or the Director of Employee and Labor Relations can help assure that this occurs.

In most cases, grievances and appeals must be brought within a specified time after the action complained of. While informal resolution efforts will not automatically extend the time limits for filing a grievance or appeal, in appropriate circumstances the complainant and the other relevant parties may mutually agree in writing to extend the time for filing a grievance or appeal.

A list of the established grievance and appeal procedures is located at http://hrweb.stanford.edu/elr/policies/list_grievance_procedures.html. Copies may also be obtained from the Sexual Harassment Policy Office, http://www.stanford.edu/group/SexHarass.

Copies of the following may be obtained from Employee and Labor Relations, 651 Serra Street:

1. “Solving Workplace Problems at Stanford: Understanding the Staff Dispute Resolution Policy” (also at http://hrweb.stanford.edu/forms/staffresolution.pdf.)

ii. Disciplinary Procedures—In appropriate cases, disciplinary procedures may be initiated. The applicable disciplinary procedure depends on the status of the individual whose conduct is in question. For example, faculty are subject to the Statement on Faculty Discipline (http://www.stanford.edu/dept/provost/faculty/policies/handbook/ch4.html#statementonfacultydiscipline), and students to the Fundamental Standard. For additional information related to student disciplinary procedures, see the Office of Community Standards (http://studentaffairs.stanford.edu/communitystandards).
The individuals referenced in this section are available to discuss these options and differing methods for dealing with sexual harassment.

4. Procedural Matters

a. Investigations—If significant facts are contested, an investigation may be undertaken. The investigation will be conducted in a way that respects, to the extent possible, the privacy of all of the persons involved. In appropriate cases, professional investigators may be asked to assist in the investigation. The results of the investigation may be used in the third party intervention process or in a grievance or disciplinary action.

b. Recordkeeping—The Sexual Harassment Policy Office will track reports of sexual harassment for statistical purposes and report at least annually to the University President concerning their number, nature and disposition.

The Sexual Harassment Policy Office may keep confidential records of reports of sexual harassment and the actions taken in response to those reports, and use them for purposes such as to identify individuals or departments likely to benefit from training so that training priorities can be established. No identifying information will be retained in cases where the individual accused was not informed that there was a complaint.

c. Indemnification and Costs—The question sometimes arises as to whether the University will defend and indemnify a Stanford employee accused of sexual harassment. California law provides, in part, “An employer shall indemnify [its] employee for all that the employee necessarily expends or loses in direct consequence of the discharge of his [or her] duties as such.” The issue of indemnification depends on the facts and circumstances of each situation. Individuals who violate this policy, however, should be aware that they and/or their schools, institutes, or other units may be required to pay or contribute to any judgments, costs and expenses incurred as a result of behavior that is wrongful and/or contrary to the discharge of the employee’s duties. In general, see Administrative Guide Memo 2.4.6 Indemnification (https://adminguide.stanford.edu/chapter-2/subchapter-4/policy-2-4-6).

5. Resources for Dealing with Sexual Harassment

a. Advice—Persons who have concerns about sexual harassment should contact the Sexual Harassment Policy Office, any Sexual Harassment Adviser at http://harass.stanford.edu/SHadvisers.html or one of the other individuals listed below. Reports should be made as soon as possible: the earlier the report, the easier it is to investigate and take appropriate remedial action. When reports are long delayed, the University will try to act to the extent it is reasonable to do so, but it may be impossible to achieve a satisfactory result after much time has passed.

Likewise, anyone who receives a report or a grievance involving sexual harassment should promptly consult with the Sexual Harassment Policy Office or with a Sexual Harassment Adviser.

There are a number of individuals specially trained and charged with specific responsibilities in the area of sexual harassment. In brief, they are:

i Sexual Harassment Advisers (http://harass.stanford.edu/SHadvisers.html) serve as resources to individuals who wish to discuss issues of sexual harassment, either because they have been harassed or because they want information about the University’s policy and procedures. There is usually at least one Adviser assigned to each of the schools at the University and to each large work unit; most of the residence deans also have been appointed as Sexual Harassment Advisers. Advisers are also authorized to receive complaints.

ii The Director of the Sexual Harassment Policy Office is responsible for the implementation of this policy. The Director’s Office also provides advice and consultation to individuals when requested; receives complaints and coordinates their handling; supervises the other Advisers; encourages and assists prevention education for students, faculty and staff; keeps records showing the disposition of complaints; and generally coordinates matters arising under this policy. Because education and awareness are the best ways to prevent sexual harassment; developing awareness, education and training programs and publishing informational material are among the most important functions of the Sexual Harassment Policy Office (http://harass.stanford.edu).

iii As stated above, individuals with concerns about sexual harassment may also discuss their concerns informally with psychological counselors (for example through CAPS or the HELP Center), chaplains (through the Memorial Chapel), or the University ombudsperson. For more information, see http://harass.stanford.edu/resources.html.

b. External Reporting—Sexual harassment is prohibited by state and federal law. In addition to the internal resources described above, individuals may pursue complaints directly with the government agencies that deal with unlawful harassment and discrimination claims, e.g., the U.S. Equal Employment Opportunity Commission (EEOC), the Office for Civil Rights (OCR) of the U.S. Department of Education, and the State of California Department of Fair Employment and Housing (DFEH). These agencies are listed in the Government section of the telephone book. A violation of this policy may exist even where the conduct in question does not violate the law.

6. Consensual Sexual or Romantic Relationships

a. In General—There are special risks in any sexual or romantic relationship between individuals in inherently unequal positions, and parties in such a relationship assume those risks. In the University context, such positions include (but are not limited to) teacher and student, supervisor and employee, senior faculty and junior faculty, mentor and trainee, adviser and advisee, teaching assistant and student, coach and athlete, and the individuals who supervise the day-to-day student living environment and student residents. Because of the potential for conflict of interest, exploitation, favoritism, and bias, such relationships may undermine the real or perceived integrity of the supervision and evaluation provided, and the trust inherent particularly in the teacher-student context. They may, moreover, be less consensual than the individual whose position confers power or authority believes. The relationship is likely to be perceived in different ways by each of the parties to it, especially in retrospect.

Moreover, such relationships may harm or injure others in the academic or work environment. Relationships in which one party is in a position to review the work or influence the career of the other may provide grounds for complaint by third parties when that relationship gives undue access or advantage, restricts opportunities, or creates a perception of these problems. Furthermore, circumstances may change, and conduct that was previously welcome may become unwelcome. Even when both parties have consented at the outset to a romantic involvement, this past consent does not remove grounds for a charge based upon subsequent unwelcome conduct.
Where such a relationship exists, the person in the position of greater authority or power will bear the primary burden of accountability, and must ensure that he or she—and this is particularly important for teachers—does not exercise any supervisory or evaluative function over the other person in the relationship. Where such recusal is required, the recusing party must also notify his or her supervisor, department chair or dean, so that such chair, dean or supervisor can exercise his or her responsibility to evaluate the alternative supervisory or evaluative arrangements to be put in place. Staff members may notify their local human resources officers. To reiterate, the responsibility for recusal and notification rests with the person in the position of greater authority or power. Failure to comply with these recusal and notification requirements is a violation of this policy, and therefore grounds for discipline. The University has the option to take any action necessary to insure compliance with the spirit of this recusal policy, including transferring either or both employees in order to minimize disruption of the work group. In those extraordinarily rare situations where it is programmatically infeasible to provide alternative supervision or evaluation, the cognizant Dean or Director must approve all evaluative and compensation actions.

b. With Students—At a university, the role of the teacher is multifaceted, including serving as intellectual guide, counselor, monitor and adviser; the teacher’s influence and authority extend far beyond the classroom. Consequently and as a general proposition, the University believes that a sexual or romantic relationship between a teacher and a student, even where consensual and whether or not the student would otherwise be subject to supervision or evaluation by the teacher, is inconsistent with the proper role of the teacher, and should be avoided. The University therefore very strongly discourages such relationships.

7. Policy Review and Evaluation—This policy went into effect on October 6, 1993, and was amended on November 30, 1995, and on May 30, 2002. It is subject to periodic review, and any comments or suggestions should be forwarded to the Director of the Sexual Harassment Policy Office.

Resources

The following is a summary of resources concerning sexual harassment available to members of the Stanford Community:

A brochure containing the policy, a list of current sexual harassment advisers, confidential resources, and other helpful information is available online at the Sexual Harassment Policy Office (http://harass.stanford.edu) web site, and in printed form from the Sexual Harassment Policy Office at Mariposa House, 585 Capistrano Way, Room 208-209, Stanford University, Stanford, CA, 94305-8230; (650) 723-1583; email: harass@stanford.edu. Copies of the University policy on sexual assault, which complements this sexual harassment policy, as well as all other documents mentioned in this section, are also available at the Sexual Harassment Policy Office.

All faculty, staff, and students who have questions regarding this policy and its enforcement can consult with a Sexual Harassment Adviser or can be directed to the local Personnel Officer or Regional Human Resources Manager. Faculty members should contact their dean or department chair, and students should contact the Director of the Sexual Harassment Policy Office or the Dean of Student Affairs.

Sexual Harassment Policy Office—telephone: (650) 723-1583; email: harass@stanford.edu.

Director: Laraine Zappert (Clinical Professor, Psychiatry and Behavioral Sciences)

Assistant Director: Nanette Andrews

Sexual Misconduct and Sexual Assault

Sexual Misconduct and Sexual Assault

Summary

The following summarizes the policy on Sexual Assault and provides information on resources available to members of the Stanford community.

Policy

Under Title IX, sexual violence (sexual misconduct and sexual assault) is a severe form of sexual harassment. Sexual misconduct and sexual assault are unacceptable and is not tolerated at Stanford University. All University employees (including student residence staff employees) have a duty to report claims of sexual misconduct or sexual assault to Cathy Glaze, Title IX Coordinator at (650) 497-4955 (voice), titleix@stanford.edu, https://titleix.stanford.edu/. For students, report claims to the Title IX Coordinator or the Office of Sexual Assault and Relationship Abuse (SARA) at (650) 725-1056 or saraooffice@stanford.edu.

The University urges an individual who has been subjected to sexual misconduct or sexual assault to make an official report. A report of the matter will be dealt with promptly. Confidentiality will be maintained to the extent possible.

The University is committed to providing information regarding on- and off-campus services and resources to all parties involved.

Students, faculty and staff found to be in violation of this policy will be subject to discipline up to and including termination, expulsion or other appropriate institutional sanctions; affiliates and program participants may be removed from University programs and/or prevented from returning to campus.

A comprehensive web site dedicated to sexual violence awareness, prevention and support can be found at Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (http://studentaffairs.stanford.edu/sara). The site contains a list of resources and describes reporting options.

Definitions

What is Sexual Misconduct?

Sexual misconduct is the commission of an unwanted sexual act, whether by an acquaintance or by a stranger, that occurs without indication of consent.

What is Sexual Assault?

Sexual assault is the actual, attempted or threatened unwanted sexual act, whether by an acquaintance or by a stranger, accomplished (1) against a person’s will by means of force (express or implied), violence, duress, menace, fear or fraud, or (2) when a person is incapacitated or unaware of the nature of the act, due to unconsciousness, sleep and/or intoxicating substances.
What is Consent?
Consent is informed, freely given, and mutually understood. Consent requires an affirmative act or statement by each participant. If coercion, intimidation, threats and/or physical force are used, there is no consent. If a person is mentally or physically incapacitated or impaired so that the person cannot understand the fact, nature or extent of the sexual situation, there is no consent; this includes conditions due to alcohol or drug consumption or being asleep or unconscious. Whether one has taken advantage of a position of influence over another may be a factor in determining consent.

Notification
With the consent of the victim, allegations of sexual assault received by University offices or personnel shall be communicated promptly to the Department of Public Safety, 711 Serra Street, telephone 9-911 for emergency response or (650) 723-9633 during normal business hours.

Emergency Services Available to Victims
Victims of sexual assault are urged to seek immediate attention from emergency police, medical, and counseling services. On the Stanford campus and in the immediate vicinity, the following provide 24-hour response and will arrange for police assistance, medical assistance, emotional support services, and advocacy and support:

- "911" Emergency Network: dial 9-911 from University phones or 911 from outside phones
- Santa Clara Valley Medical Center, 751 South Bascom Avenue, San Jose, telephone (408) 885-5000
- YWCA Stanford Hotline, for students, telephone (650) 725-9955
- Stanford Hospital and Clinics, 300 Pasteur Drive, Stanford, telephone (650) 723-5111
- Residence and Graduate Life Deans, page through 723-8222, extension 25085

Non-Emergency Resources
Office of Sexual Assault & Relationship Abuse Education & Response (SARA) (725-1056) provides comprehensive and consistent response to incidents of sexual and relationship violence to the campus community. SARA provides case consultation to students and staff, case management for reported assaults and information and referrals to services on and off campus. The office also assists with educational outreach and training to increase awareness, sensitivity, and community accountability in the prevention of these acts. Online information is available at the Sexual Assault & Relationship Abuse Education & Response (SARA) (http://studentaffairs.stanford.edu/sara.html) web site.

Additional resources for students are available at Vaden Health Service at (650) 723-3785, including short-term counseling, referral to long-term therapy, follow-up pregnancy testing, and testing and treatment for sexually transmitted diseases. Additional services for faculty and staff are available at the University's HELP Center, Galvez House (723-4577), including general counseling, information, support, and referral. The University ombuds (723-3682) is available to all in the Stanford community for general counseling, advice, and advocacy. Cathy Glaze, Title IX Coordinator, Mariposa House, 585 Capistrano Way, Stanford University, Stanford CA, 94305-8230, (650) 497-4955, (650) 497-9257, titleix@stanford.edu, is available to assist students to address the effects of sexual harassment and sexual violence.

Confidentiality of Information
The University will make reasonable and appropriate efforts to preserve an individual's privacy and protect the confidentiality of information. However, because of laws relating to reporting and other state and federal laws, the University cannot guarantee confidentiality to those who report incidents of sexual violence except where those reports are privileged communications with those in legally protected roles (set forth below). The professional being consulted should, if possible, make these limits clear before any disclosure of facts.

An individual can speak confidentially with certain individuals in legally protected roles. They include sexual assault counselors such as those at the YWCA Sexual Assault Center at Stanford, the Help Center, Counseling and Psychological Services (CAPS) and clergy. Exceptions to maintaining confidentiality are set by law; for example, physicians and nurses who treat any physical injury sustained during a sexual assault are required to report it to law enforcement. In addition, physicians, nurses, psychologists, psychiatrists, teachers and social workers must report a sexual assault committed against a person under age 18.

Information shared with other individuals is not legally protected from being disclosed. Considerations with respect to a complainant's request for confidentiality include factors such as the University's ability to respond effectively, to prevent further harassment or to ensure the safety of the University community. For example, an advisor, the Dean of Student Life, a Residence Dean or a Resident Assistant may need to inform other individuals to protect their safety or rights, in fairness to the persons involved, or in response to legal requirements. As required by law, all disclosures to any University employee of an on-campus sexual assault must be reported for statistical purposes only (without personal identifiers) to the Stanford University Department of Public Safety, which has the responsibility for tabulating and annually publishing sexual assault and other crime statistics. Such reports are for statistical purposes and do not include individual identities.

State law permits law enforcement authorities to keep confidential the identity of a person officially reporting a sexual assault. The Stanford University Department of Public Safety policy is to maintain such confidentiality. However, if the District Attorney files a criminal charge, confidentiality might not be maintained.

If a complaint is filed with the Office of Judicial Affairs then the accused student must be provided with the name of the alleged victim and witnesses, if applicable. However, accommodations can be made to protect the victim's privacy, as described on the website for the Office of Judicial Affairs.

Information about Options
The University offices responding to allegations of sexual misconduct or sexual assault will inform affected individuals, at a minimum, of the options of: criminal prosecution, civil prosecution, the disciplinary process, the appropriate Title IX grievance procedure, alternative housing assignments, and academic assistance alternatives.

Smoke-Free Environment
Smoke-Free Environment

Applicability
Applies to all academic and administrative units of Stanford University, including SLAC and all campus student housing. This policy does not supersede more restrictive policies that may be in force to comply with
federal, state, or local laws or ordinances. The President must approve more restrictive policies not required by law.

1. Policy
It is the policy of Stanford University that all smoking, including but not limited to tobacco products and the use of electronic smoking devices, is prohibited in enclosed buildings and facilities and during indoor or outdoor events on the campus.

2. Definition
“Smoke-free” refers to an environment that is free of smoke from, among other things, tobacco products and/or vapors from electronic smoking devices.

3. Guidelines
a. Smoking-Prohibited Areas
Specifically, smoking is prohibited in classrooms and offices, all enclosed buildings and facilities, in covered walkways, in University vehicles, during indoor or outdoor athletic events, during other University sponsored or designated indoor or outdoor events and in outdoor areas designated by signage as "smoking prohibited" areas.

- Ashtrays will not be provided in any enclosed University building or facility.
- "Smoking Prohibited" signs will be posted.

b. Outdoor Smoking Areas
Except where otherwise posted as a “smoking prohibited area,” smoking is generally permitted in outdoor areas, except during organized events. Outdoor smoking in non-prohibited areas must be at least 30 feet away from doorways, open windows, covered walkways, and ventilation systems to prevent smoke from entering enclosed buildings and facilities. To accommodate faculty, staff, and students who smoke, Vice Presidents, Vice Provosts, and Deans may designate certain areas of existing courtyards and patios as smoking areas, and must provide ashtrays. The specific academic or administrative unit(s) will be responsible for absorbing all costs associated with providing designated smoking areas and ashtrays.

4. Enforcement
This policy relies on the consideration and cooperation of smokers and non-smokers. It is the responsibility of all members of the University community to observe and follow this policy and its guidelines.

a. Smoking Cessation Information
Smoking cessation programs are available for faculty and staff through the Center for Research in Disease Prevention, Health Improvement Program (HIP). Students may contact the Health Promotion Program (HPP) through the Student Health Center for smoking cessation information or programs.

b. Repeated Violations
Faculty, staff and, students repeatedly violating this policy may be subject to appropriate action to correct any violation(s) and prevent future occurrences.

5. Implementation and Distribution
This policy will be disseminated to all faculty, staff and students and to all new members of the University Community.

---

Stanford Name and Trademarks
Ownership and Use of Stanford Name and Trademarks
Stanford registered marks, as well as other names, seals, logos, and other symbols and marks that are representative of Stanford, may be used solely with permission of Stanford. Merchandise bearing Stanford’s names and marks, such as t-shirts, glassware, and notebooks, must be licensed. For complete text of the currently applicable policy, including the University officers authorized to grant permission to use the Stanford name and marks, see Administrative Guide Memo 1.5.4 Ownership and Use of Stanford Name and Trademarks (https://adminguide.stanford.edu/chapter-1/subchapter-5/policy-1-5-4).

Student Non-Academic Grievance Procedure
Student Non-Academic Grievance Procedure
Policy
The following is the policy:

1. Applicability
a. It is perhaps inevitable in any university that some students may at times feel improperly treated, and that concerns about unfairness (including potential discrimination and harassment) may also at times arise.

In this regard (and although this grievance procedure is not limited to concerns of discrimination), Stanford University’s Nondiscrimination Policy provides in part: “Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or any other characteristic protected by applicable law in the administration of the University’s programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence.”

b. At Stanford, there are a number of grievance procedures through which students can raise and seek redress for what they believe to be unfair, improper or discriminatory decisions, actions, or treatment. For example:

i. If the matter involves an academic decision, the Student Academic Grievance Procedure may be the applicable procedure.
ii. If the matter involves a disability-related concern, the Student ADA/Section 504 Grievance Procedure may be applicable.
iii. If the matter involves a student-athlete and his or her sport, the Student-Athlete Grievance Procedure may be applicable.

b. The purpose of the Student Non-Academic Grievance Procedure is to provide a process for students to seek resolution of disputes and grievances that may not fall within the scope of one of the other grievance processes, including those which may arise in a student’s capacity as a student-employee.
Nonacademic Regulations

116

Student Non-Academic Grievance Procedure

3. Formal Grievance

b. The grievance document should be submitted to the Director. A
   b. If no resolution results (or if circumstances make discussion
   in extraordinary circumstances, such as where (for example) the policy or practice
   is alleged to be contrary to law. In the same way, the Director
   may entertain a grievance under this procedure brought by an
   individual who is not an undergraduate or graduate student, in an
   appropriate case or as required by law.

e. The Director is responsible for administering this Student Non-
   Academic Grievance Procedure.

   i The Director may be contacted at: Director of the Diversity
   and Access Office, Kingscote Gardens, 419 Laguna Drive,
   Suite 130, Stanford, CA 94305-8550; (650) 723-0755 (voice),
   (650) 723-1791 (fax), equal.opportunity@stanford.edu (email),

   ii The Director in his or her sole discretion can decide whether
   to refer a grievance brought under this procedure to another
   grievance process. In cases involving allegations of sexual
   harassment in particular, the Director may wish to consult
   with the Director of the Sexual Harassment Policy Office as to
   the most appropriate way to proceed; see Section 5.d below.
   In cases involving student employment, the Director may
   wish to consult with the University’s Department of Human
   Resources.

2. Informal Resolution

a. As a general proposition (and although particular circumstances
   may warrant an exception), the student should first discuss the
   problem and seek a solution with the individual(s) most directly
   involved.

b. If no resolution results (or if circumstances make discussion
   inappropriate with the person most directly involved), the student
   should then consult with the individual at the next (higher)
   administrative level in the department, school, residence or
   University administrative unit. Serious efforts should be made to
   resolve the issue locally at an informal level without resort to a
   formal grievance; such efforts may continue even after the formal
   process is underway.

3. Formal Grievance

a. If informal means of resolution prove inadequate, the student
   should set forth in writing the substance of the complaint, the
   grounds for it and the evidence on which it is based, and the
   efforts taken to date to resolve the matter. It is at this stage that
   the complaint becomes a formal grievance.

b. The grievance document should be submitted to the Director. A
   grievance should be filed in a timely fashion, i.e., normally no later
   than thirty days after of the end of the academic quarter in
   which the action that is the subject of the grievance occurred. Except
   in extraordinary circumstances, delay in filing a grievance will be
   grounds for rejection of that grievance.

c. The Director will promptly initiate a review, which should normally
   be completed within sixty days. The Director may attempt to
   resolve the matter informally, and may refer the matter (or any
   part of it) to a grievance officer or other designee, who will look
   into and/or address the matter as the Director directs. The
   Director may also, in appropriate cases, remand the matter to the
   appropriate administrator (including to the administrative level at
   which the grievance arose) for further consideration.

d. In undertaking this review, either the Director, his or her designee,
   or the grievance officer may request a response to the issues
   raised in the grievance from any individuals believed to have
   information the reviewer considers relevant, including faculty,
   staff and students.

e. The Director (or his or her designee) will issue his or her decision
   in writing, and take steps to initiate such corrective action as is
   called for (if any). Conduct meriting discipline will be brought to
   the attention of the appropriate disciplinary process.

4. Appeal

a. If the student is dissatisfied with the disposition by the Director
   (or his or her designee), he or she may appeal to the Provost
   (Office of the President and Provost, Building 10, Stanford, CA
   94305-2061; phone 650-725-4075; fax 650-725-1347). The appeal
   should be filed in writing with the Provost within ten days of the
   issuance of the decision by the Director (or his or her designee);
   a delay in filing the appeal may be grounds for rejection of that
   appeal.

b. The Provost may attempt to resolve the matter informally, and
   may refer the matter (or any part of it) to a grievance appeal
   officer, who will review the matter at the Provost’s direction. The
   Provost may also, in appropriate cases, remand the matter to the
   appropriate administrator (including to the administrative level at
   which the grievance arose) for further consideration.

c. The Provost should normally complete his or her review of the
   appeal and issue his or her decision in writing within forty-five
   days. That decision is final.

5. General Provisions

a. Time Guidelines—The time frames set forth herein are guidelines.
   They may be extended by the Director or Provost, as applicable,
   in his or her discretion for good cause (including for reasons
   relating to breaks in the academic calendar), and will nearly
   always be extended during summers and the winter closure.

b. Advisers—A student initiating or participating in a grievance
   under this procedure may be accompanied by an adviser in any
   discussion with the Director, the Provost or their designees, or
   a grievance or grievance appeal officer under this procedure;
   any adviser must be a current Stanford faculty, staff member or
   student.

c. Ombuds—Students should be aware that the University Ombuds
   (http://www.stanford.edu/dept/ocr/ombuds) is available to
   discuss and advise on any matters of University concern and
   frequently help expedite resolution of such matters. Although it
   has no decision making authority, the Ombuds’ Office has wide
   powers of inquiry.

d. Sexual Harassment and Sexual Misconduct and Sexual Assault
   —For information and resources concerning sexual harassment,
   students should refer to the web page of the Sexual Harassment
   Policy Office at http://harass.stanford.edu. For information
   and resources concerning sexual assault and relationship
   abuse, students should refer to the web page of the Sexual
Title VI

Title VI of the Civil Rights Act of 1964

It is the policy of Stanford University to comply with Title VI of the Civil Rights Act of 1964 and its regulations, which prohibit unlawful discrimination on the basis of race, color, and national origin. The Title VI Compliance Officer is the Director of the Diversity and Access Office, who has been appointed to coordinate the University’s efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title VI and its regulations should contact the Director of the Diversity and Access Office, Kingscote Gardens, 419 Lagunita Drive, Suite 130, Stanford, CA 94305-8550, (650) 723-0755 (voice), (650) 723-1791 (fax), equal.opportunity@stanford.edu (email). Grievance procedures to address complaints of discrimination on the basis of race, color, and national origin are set forth in the "Student Non-Academic Grievance Procedure (p. 2)." See also Administrative Guide Memo 2.2.1 General Personnel Policies (https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-2-1).

Title IX

Title IX of the Education Amendments of 1972

It is the policy of Stanford University to comply with Title IX of the Education Amendment of 1972 and its regulations, which prohibit unlawful discrimination on the basis of sex. The Title IX Compliance Officer is Catherine Glaze, who has been appointed to coordinate the University’s efforts to comply with the law. Anyone who believes that Stanford is not in compliance with Title IX and its regulations should contact the Title IX Coordinator, 419 Lagunita Street, Suite 240, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), titleix@stanford.edu (email). (See also the following section for addressing Title IX Concerns relating to sexual harassment.)

Title IX Concerns Relating to Sexual Harassment and the Violence Against Women Reauthorization Act of 2013

Catherine Glaze has been appointed Stanford’s Title IX Coordinator to respond to matters of sexual assault, relationship (dating) violence and stalking (prohibited conduct). The Title IX Coordinator serves as a resource to review allegations of prohibited conduct and may provide interim accommodations relating to housing, academics, or no-contact letters while a matter is being reviewed. When prohibited conduct has been confirmed by a preponderance of the evidence, the Title IX Coordinator will provide long term accommodations and services to students to address the effects of sexual harassment and sexual violence. The Title IX Student Policy (https://titleix.stanford.edu/sites/default/files/title_ix_student_policy_ay_2013-14_faculty_staff_may_2014_final_0.pdf) provides the grievance procedure and appeal mechanism to review the University’s actions relating to a Title IX concern involving Prohibited Conduct; see the Title IX web site (https://titleix.stanford.edu) for additional information. Additional resources are available the Sexual Assault Support and Resources (https://notalone.stanford.edu) web site. Ms. Glaze’s contact information is titleix@stanford.edu; (650) 497-4955. An individual may contact the U.S. Department of Education, Office for Civil Rights (OCR). See also Administrative Guide Memos 2.1.2 Recruiting and Hiring of Regular Staff (https://adminguide.stanford.edu/chapter-2/subchapter-2/policy-2-1-2), 1.7.1 Sexual Harassment (https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-1), 1.7.2, Consensual Sexual or Romantic Relationships (https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-2), and 1.7.3, Sexual Misconduct and Sexual Assault (https://adminguide.stanford.edu/chapter-1/subchapter-7/policy-1-7-3).

Visitor Policy • University Statement on Privacy

Visitor Policy/University Statement on Privacy

Stanford University has an interest in ensuring that the privacy of its students, faculty, and staff is respected, and that no activities interfere with education, research, or residential life.

The University is private property; however, some areas of the campus typically are open to visitors. These areas include White Plaza, public eating areas (such as those at Tresidder Union), outdoor touring areas, and locations to which the public has been invited by advertised notice (such as for public educational, cultural, or athletic events). Even in these locations, visitors must not interfere with the privacy of students, faculty, and staff, or with educational, research, and residential activities. The University may revoke at any time permission to be present in these, or any other areas. Visitors should not be in academic or residential areas unless they have been invited for appropriate business or social purposes by the responsible faculty member, student, or staff member.

No commercial activity, including taking photos or similar audio or visual recordings that are sold to others or otherwise used for commercial purposes, may occur on the campus or in University programs without the University’s permission. Requests for permission should be submitted to the Director of University Communications or, as appropriate, the Dean of Students, the Department of Athletics, or the Office of Public Events. Recognized student groups and official units of the University will be granted such permission so long as they do not violate privacy or property interests of others; so long as any sale of their products is predominantly on campus to students, faculty, and staff; and so long as they comply with applicable University policies and procedures.

Violators of this policy may be subject to criminal and/or civil liability, as well as University disciplinary action.
Established in 1995, the Office of the Vice Provost for Undergraduate Education (VPUE) comprises the Bing Overseas Studies Program, Residential Programs, Stanford Introductory Studies, and Undergraduate Advising and Research. VPUE fosters innovation, integration, and pedagogical advancement of the Stanford undergraduate journey. Working with our partners, we prepare Stanford students to be engaged citizens with the creative confidence to tackle the world’s most complex challenges.

VPUE programs for first- and second-year students include New Student Orientation/Approaching Stanford, the Leland Scholars Program, Thinking Matters, Program in Writing and Rhetoric, Introductory Seminars, and Sophomore College. Programs for more advanced students include the Bing Overseas Studies Program, Writing in the Major, Undergraduate Research, Arts Intensive, Leadership Intensive, and Bing Honors College. Undergraduate Advising and the Hume Center for Writing and Speaking serve undergraduates throughout their time at Stanford. The office of the VPUE works closely with the office of the Vice Provost for Student Affairs and the Admissions Office. The Vice Provost for Undergraduate Education reports to the Provost.

Policies governing undergraduate education are formulated by Faculty Senate committees and voted into legislation by the Faculty Senate. The Committee on Undergraduate Standards and Policy (C-USP) addresses such topics as general education requirements, grading, awards, advising, and teaching evaluation. The Committee on Review of Undergraduate Majors (C-RUM) oversees the initiation and review of undergraduate degree programs. Committee members include the Vice Provost for Undergraduate Education or his delegated staff (ex-officio) and representatives from the faculty at large, administration (such as the Office of the University Registrar), and students. The Associated Students of Stanford University (ASSU) nominations committee selects student members. The VPUE also maintains, by rule of the Faculty Senate, the Thinking Matters Governance Board, the Writing and Rhetoric Governance Board, and the Breadth Governance Board to oversee these university degree requirements. Finally, the Undergraduate Advisory Council (UGAC) was established by the provost in 1996 to serve as the main faculty advisory body for the Vice Provost for Undergraduate Education.

Vice Provost for Undergraduate Education: Harry J. Elam, Jr.  
(Senior Vice Provost for Education, Vice President for the Arts, Freeman-Thornton Vice Provost for Undergraduate Education, and the Olive H. Palmer Professor in Humanities)

Senior Associate Vice Provost for Undergraduate Education: Liz Hadly  
Professor of Biology

Associate Vice Provost for Undergraduate Education: Sharon Palmer

Associate Vice Provost for Finance and Administration: Charles Litchfield
Thinking Matters offers courses that satisfy the one quarter freshman requirement. Taught by faculty from a wide range of disciplines and fields, the Thinking Matters (THINK) requirement helps students develop the ability to ask rigorous and genuine questions that can lead to scientific experimentation or literary interpretation or social policy analysis. Through the study of these questions and problems, students develop critical skills in interpretation, reasoning, and analysis as well as enhance capacities for writing and discussion. The THINK requirement may be satisfied in one of three ways:

1. Thinking Matters courses:
   - a one quarter, 4-unit course taught by Academic Council faculty.

2. Education as Self-Fashioning courses: ESF
   - a one quarter (Autumn), 7-unit course that satisfies both the Thinking Matters Requirement and the first-year Writing Requirement. For information on the program, faculty, and instructors, see the "ESF (p. 121)" section of this bulletin.

3. Integrated Learning Environments: ITALIC, and SLE
   - a three quarter, residence-based learning experience, which satisfies the THINK requirement, two of the University Writing and Rhetoric requirements, and selected General Education Requirements. For information regarding the three residence-based programs, faculty, and instructors, see the "ILE (p. )" section of this bulletin.

Thinking Matters Courses Offered in 2017-18

- Spring Quarter on ExploreCourses (https://explorecourses.stanford.edu/search?q=THINK&view=catalog&pagename=0&academicYear=20172018&filter-term-Spring=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-THINK=on&filter-catalognumber-THINK=on)

Program in Writing and Rhetoric (PWR)

Faculty Director: Adam Banks

Director, Stanford Introductory Studies for PWR: Marvin Diogenes

Associate Director: Christine Alfano

Director, Hume Center for Writing & Speaking: Zandra Jordan

Associate Director, Hume Center for Writing & Speaking: Sarah Pittock

Director, Oral Communication Program: Doree Allen

Director, Stanford Storytelling Project: Jonah Willingham

Lecturers: Christine Alfano, Paul Bator, Angela Becerra Vidergar, Shaleen Brawn, Tessa Brown, Russ Carpenter, Erica Cirillo-McCarthy, Kevin DiPiro, Erik Ellis, Norah Fahim, Megan Formato, Thomas Freeland (Oral Comm), Wendy Goldberg, Alex Greenhough (ITALIC), Arturo Heredia, Shannon Hervey, Donna Hunter, Jennifer Johnson, Chris Kamrath, Valerie Kinsey, Clara Lewis, Helen Lie (Oral Comm), Kimberly Moekle, Gabrielle Moyer, Ashley Newby, John Peterson, Sarah Pittock, Emily Polk,
Courses

The Writing and Rhetoric requirement includes courses at three levels.  

1. The first-level course, taken in the first year, can be completed in PWR or Integrated Learning Environments, including Structural Liberal Education (SLE) and Immersion in the Arts: Living in Culture (ITALIC), or by completion of the Education as Self-Fashioning (ESF) course; the curriculum emphasizes analysis and research-based argument.

2. The second-level course, to be completed by the end of the sophomore year, is a writing and oral/multimedia presentation course taught by the Program in Writing and Rhetoric. Completion of Structured Liberal Education also fulfills this requirement. Introductory Seminars certified by the Writing and Rhetoric Governance Board satisfy the second-level Writing and Rhetoric Requirement (WRITE 2). Courses offered as Introductory Seminars require an additional application form; see the Introductory Seminars web site (https://undergrad.stanford.edu/programs/introsems).

3. The third-level course is a Writing in the Major (WIM) course taught in each major, providing students with systematic opportunities to develop skills for writing in their chosen fields. A list of certified WIM courses may be found in the table of "Undergraduate Major Unit Requirements (p. 41)" of this bulletin. WIM course descriptions may be found under individual department and program sections.

The sequence of required courses provides a coordinated approach responsive to how students mature as writers, researchers, and presenters during their undergraduate years. At each level, students develop greater sophistication in conducting inquiry and producing scholarly work in progressively more specific disciplinary contexts.

Before the term in which students enroll in the first two levels of the requirement, they review course descriptions on the PWR Courses webpage. After reviewing the offerings, students submit a list of top choices, and the PWR office assigns students to courses based on these preferences.

Students wishing to pursue advanced work in Writing and Rhetoric may enroll in electives offered by PWR. Topics vary; further information may be found in the PWR section of the Stanford Bulletin's ExploreCourses web site or on the PWR advanced courses web page. PWR also offers courses culminating in a Notation in Science Communication. For more information, visit the webpage.

Hume Center for Writing and Speaking

Location: Building 250  
Mail Code: 2085  
Phone: (650) 723-0045  
Email: humecenter@stanford.edu  
Web Site: http://hume.stanford.edu

The Hume Center for Writing and Speaking (Hume Center) works with all Stanford writers to help them develop rich and varied abilities in every aspect of writing and oral communication. In one-to-one sessions, Hume writing consultants help students get started on assignments; address and overcome writer's block or performance anxiety; learn strategies for revising and editing; and understand academic conventions in their fields. Hume emphasizes support for students' writing, oral presentations, and multimedia compositions for PWR, Thinking Matters, and Introductory Seminars while also serving all Stanford undergraduates through individual and group tutorials, workshops, and seminars. The Hume Center also works with students in Writing in the Major (WIM) courses and students writing Honors theses. Other events hosted by the Center include performances for Parents' Weekend and Admit Weekend.
For further details, see the Hume Center for Writing and Speaking website.

**Oral Communication Program**

Email: speakinghelp@stanford.edu  
Web Site: http://speakinghelp.stanford.edu

The Oral Communication Program provides opportunities for undergraduates and graduate students to develop or improve their oral communication skills. Courses and workshops offer a comprehensive approach to speech communication, including training in the fundamental principles of public speaking and the effective delivery of oral presentations. The goal is to enhance students’ general facility and confidence in oral expression. The program also provides innovative discipline-based instruction to help students refine their personal speaking styles in small groups and classroom settings.

**Student Writing and Oral Communication Tutors**

Students with a passion for writing and/or public speaking are encouraged to apply to become writing or oral communication tutors (OCTs); the application process takes place each January, and for those students chosen to serve as writing tutors or OCTs, we offer a required training practicum in Spring Quarter.

**PWR Courses Offered in 2017-18**

**Education as Self-Fashioning**

**Director:** Dan Edelstein (French and Italian)  
**Faculty:** Dan Edelstein (French and Italian), Margot Gerritsen (Energy Resource Engineering), Andrew Hall (Political Science), Robert Harrison (French and Italian), Blair Hoxby (English), Caroline Hoxby (Economics), Andrea Nightingale (Classics), Ken Taylor (Philosophy).  
**Writing Instructor:** Brandon Bark, Megan Formato, Biliana Kassabova, Valerie Kinsey, Friederike Knuepling, Sarah Perkins, Ruth Starkman, Ian Tewksbury.

Office: Sweet Hall, Second Floor  
Mail Code: 94305-3068  
Phone: (650) 723-0944  
Email: thinkingmatters@stanford.edu  
Web Site: https://undergrad.stanford.edu/programs/education-self-fashioning-esf

**Education as Self-Fashioning (ESF)** is a unique opportunity offered only in the autumn quarter, since its aim is to introduce entering students to a liberal education. The six courses provide you with an opportunity to work closely with a faculty member in a seminar-style setting while simultaneously completing your first-year writing requirement. In ESF, we consider writings about education by intellectuals working in various fields, with the aim of articulating different ways that education can be used to structure one’s thinking, one’s self, and ultimately one’s life as a whole. You will grapple with this issue in dialogue with fellow students and faculty from across a wide range of disciplines — from the humanities and social sciences through the natural sciences and mathematics.

The ESF program satisfies both the Thinking Matters and the PWR1 requirement. ESF is a set of linked seminars related to the general theme expressed in the course title. Six seminars, each with a different focus, meet separately as discussion classes led by the faculty; all ESF students also come together for a plenum session or large lecture each week.

**Oral Communication Courses Offered in 2017-18**

- **Oral Communication Courses**
  - Autumn Quarter
  - Winter Quarter
  - Spring Quarter (https:// explorecourses.stanford.edu/search?q=oralcomm*&view=course&filter-term-Spring=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c%26academicYear=20172018)
  - Summer Quarter (https:// explorecourses.stanford.edu/search?q=oralcomm*&view=course&filter-term-Summer=on&page=0&filter-coursestatus-Active=on&collapse=%2c5%2c6%2c%26academicYear=20172018)
Each seminar coordinates writing instruction with the course theme in specially designated writing sections.

The three components of ESF are described below. ESF counts as a 7-unit course.

1. A seminar with a faculty member that meets once per week for at least 75 minutes.
2. A section with a writing instructor that meets for sessions of 110 minutes twice per week.
3. A lecture series that will meet once-a-week featuring prominent intellectuals. These lectures are required for students enrolled in ESF.

ESF Courses Offered in Autumn 2017-18
- All ESF Courses Offered in 2017-18 (https://exploreCourses.stanford.edu/search?q=ESF&view=rcatalog&page=0&academicYear=20172018&filter-term-Autumn=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-ESF=on)

Introductory Seminars
Faculty Director: Russell Berman, Comparative Literature and German Studies
Director, Stanford Introductory Studies for Introductory Seminars: Ellen Woods
Associate Director: Dayo Mitchell

Faculty: More than 200 faculty from the Schools of Humanities & Sciences; Engineering; Law; Medicine; Earth, Energy & Environmental Sciences; and the Graduate Schools of Business and Education

Offices: Second Floor, Sweet Hall
Mail Code: 3069
Phone: (650) 724-2405
Email: introsems@stanford.edu
Web Site: http://introsems.stanford.edu

The Introductory Seminars program offers more than 200 small classes for first- and second-year students taught by faculty from across the seven Schools of the University. Professors teach subjects drawn from their research and scholarship and engage students in deep investigation of important questions and issues. Seminars require little or no formal background, and welcome first-year students and sophomores to Stanford’s intellectual community.

Many seminars satisfy the Ways Breadth Requirements, and several meet the second-level Writing and Rhetoric Requirement (Writing 2). There is no limit on the total number of seminars a student may take. Most seminars are filled through an online selection and pre-enrollment process. Seminars that have space available are open for self-enrollment in Axess, with preference to first- and second-year students. For information about online sign-up and enrollment, see the Introductory Seminars (https://undergrad.stanford.edu/programs/introsems) web site.

Sign-up deadlines for each quarter are at 11:59 p.m. on:
- Autumn Quarter: August 30, 2017
- Winter Quarter: October 15, 2017
- Spring Quarter: January 28, 2018

Sophomore College
Offices: Sweet Hall, Second Floor
Mail Code: 3069
Phone: (650) 724-4667
Email: sophcollege@stanford.edu
Web Site: http://sophcollege.stanford.edu

Sophomore College (SoCo) offers rising sophomores who share a passion for an area of study an opportunity to meet daily in seminar-size classes with Stanford faculty for lecture and discussion; students may also work in labs, participate in community-based learning, go on field trips, and engage in a range of other activities that facilitate in-depth mentoring relationships. Held before the start of students’ sophomore year, this residential program encourages academic and social connections and transforms classes into intellectual communities, helping participants establish rich relationships with peers and faculty that extend beyond graduation. Seminars are for 2 credits; the Sophomore College program fee covers tuition, room, board, books, and class-required travel arranged by the program. Financial assistance is available. You can view the on-line catalog and learn more about SoCo at the Sophomore College (https://undergrad.stanford.edu/programs/sophomore-college) web site.

Arts Intensive
Offices: Sweet Hall, Second Floor
Mail Code: 3069
Phone: (650) 724-4667
Email: artsintensive@stanford.edu
Web Site: http://artsintensive.stanford.edu

The Arts Intensive (AI) Program offers rising sophomores, juniors, and seniors the opportunity to study intensively with Stanford arts faculty and small groups of other Stanford students. The Arts Intensive program takes place over three weeks in September before the start of Autumn Quarter.

Arts Intensive courses engage students in the theory and practice of a particular artistic discipline. Courses often include field trips, workshops, film screenings, studio sessions, or other arts events in the afternoons, evenings, and on weekends. Courses are taught by Stanford arts faculty and often include contributions from professional visiting artists. Arts Intensive students live together in a Stanford residence during the program, making for a rich immersion into a creative community. This unique opportunity allows students to focus on their art practice without the constraints of other coursework. Enrollment is by application and takes place in Spring Quarter for the upcoming September program.

Each Arts Intensive course enrolls 10 to 20 students and offers 2 units of academic credit. For more information or to apply, see the Arts Intensive (http://artsintensive.stanford.edu) web site.

Bing Honors College
Offices: Hume Center for Writing and Speaking (Building 250)
Mail Code: 2085
Phone: (650) 723-0045
Email: binghonorscollege@stanford.edu
Web Site: Bing Honors College (http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/OO_honors_BingHonors.html)

Bing Honors College brings students working on the early phases of their honors theses back to campus in early September, and gives them three
weeks before the start of Autumn Quarter during which they can think, read, plan, research, and write.

With the support of faculty leaders and graduate students from participating departments and programs, students work on what they need, such as narrowing down a topic, improving research skills, making a timeline, writing a literature review, starting a chapter, collecting or sorting data, etc. This opportunity to focus solely on their theses helps the students to begin their senior year with a sense of direction and intellectual purpose, a commitment to their scholarship, and concrete progress on their projects. The College provides room and board. It also sponsors cross-disciplinary forums, such as writing workshops and faculty-led research panels, as well as residential activities and a closing celebratory event for all the students and their faculty leaders.

If you are a prospective honors student interested in joining Bing Honors College, please contact your department to find out whether it is participating. If your department is not participating but your adviser is willing to nominate you, the College will try to place you with a BHC leader who will provide you with the necessary support and guidance.
OVERSEAS STUDIES

Bing Overseas Studies Program

The Bing Overseas Studies Program (BOSP) provides opportunities for Stanford students to broaden their undergraduate education through study in another country and exposure to its culture. Regular quarter-length programs in Australia, Beijing, Berlin, Cape Town, Florence, Istanbul, Kyoto, Madrid, Oxford, Paris, and Santiago offer courses in social and natural sciences, humanities, engineering, and earth sciences with full Stanford credit. Many courses also count toward major requirements and/or fulfill University breadth requirements. Students may enroll for one or more quarters at most locations. Academic or paid internships are available at certain program locations. Research opportunities are available in various formats at different centers. Community-engaged learning and community-based research opportunities are available in Cape Town. Minimum academic and language prerequisites are specific to each program. See the BOSP (http://bosp.stanford.edu) website for information on these prerequisites.

While studying overseas through BOSP, students remain registered at Stanford and pay regular tuition, along with an overseas fee, which is based on Stanford on-campus room and board rates. Regular financial aid applies, and may be adjusted to cover additional costs. At many centers, students live in a homestay or a dormitory setting with local and other students.

In addition to the programs offered through BOSP for enrolled Stanford students, the University is a member of the Kyoto Consortium for Japanese Studies (KCJS), where students may enroll while remaining registered at Stanford. Overseas Studies also offers three-week faculty-led overseas seminars in various locations during Summer Quarter, two faculty-initiated programs in Oaxaca, Mexico focusing on community health and biocultural diversity, and occasional other such programs in various locations.

Located on the ground floor of Sweet Hall, Overseas Studies has full-time staff members and student ambassadors to assist in advising and planning for overseas study. Course information, while accurate at the time of publication, is subject to change. Consult the BOSP (http://bosp.stanford.edu) website for updated information.

Locations

Courses offered by the Overseas Studies Program are listed on the Stanford Bulletin’s (http://explorecourses.stanford.edu) ExploreCourses (http://explorecourses.stanford.edu) website under subject codes beginning with OSP. Each BOSP location has its own subject code. Those subject codes, by location, are:

- Australia [OSPAUSTL]
- Beijing [OSPBEIJ]
- Berlin [OSPBER]
- Cape Town [OSPCTPWN]
- Florence [OSPFLOR]
- Kyoto [OSPKYOTO]
- Kyoto Consortium for Japanese Studies [OSPKYOCR]
- Madrid [OSPMADRD]
- Oxford [OSPOXFRD]
- Paris [OSPPARIS]
- Santiago [OSPSANTG].

**UNDERGRADUATE ADVISING AND RESEARCH**

**Undergraduate Advising and Research**

UAR (Central Office): Sweet Hall, first floor  
Phone: (650) 723-2426  
Fax: (650) 725-1436  
Web Site: http://undergrad.stanford.edu  
Email: advising@stanford.edu (vpue-advising@stanford.edu), vpue-research@stanford.edu  
Appointments: (650) 723-2426

Undergraduate Advising and Research upholds the mission, standards, and requirements of the University, introduces students to the full intellectual richness of undergraduate study at Stanford, supports students in their academic and intellectual pursuits, and instills within them a sense of identity within and belonging to our community of scholars at Stanford. UAR is responsible for facilitating new students’ transition to Stanford, academic advising, academic policy and progress, and undergraduate research opportunities.

**Transitioning New Students**

UAR is responsible for the Approaching Stanford program, which guides new students through the process of coming to Stanford from their admission to the University until the first day of class. This process culminates in New Student Orientation which is required for all new freshmen and transfer students. See the Approaching Stanford (https://approaching.stanford.edu) web site for additional information.

**First-Year and Transfer Student Policies**

Stanford values the transition process as the foundation for thriving both academically and personally in our community. The following policies support this principle and apply to freshmen and new transfer students:

- All first-year and new transfer students are required to attend New Student Orientation and must be in residence by 5:00 p.m. on the first day of NSO, Tuesday, September 19, 2017.
- First-year and new transfer students are required to live on campus in University housing for three consecutive quarters in their first year. Should behavior warrant a first-year student’s removal from the residences, that student cannot enroll in classes until he or she has returned to the residential community.
- When circumstances arise which make it advisable for a first-year to take a leave absence at any time during the first year, he or she is required to wait until Autumn Quarter of the following year to return to Stanford.
- First-year and new transfer students cannot enroll in the Summer Quarter prior to their first year unless they are participating in a VPUE-sponsored program. Exceptions are very rarely granted.

**Advising**

UAR pairs each first-year with two advisers: a pre-major adviser (faculty and academic staff) and an academic advising director in the residences. First-years are matched with their pre-major advisers according to their preliminary academic interests and residence. Pre-major advisers are well suited to help students understand the University and are the first of many mentors students find at Stanford. The UAR academic advising directors in the undergraduate residences complement the role of the assigned pre-major advisers with a comprehensive understanding of the curriculum. They advise students broadly on their courses of study and long-term goals and can answer questions about academic policy. The UAR advising staff also includes professional advisers in Sweet Hall who are both general and specialized academic advisers in the areas of research and fellowships, pre-professional advising, returning student and transfer student advising, or coterminal advising, as well as advisers in the Athletics Academic Resource Center (https://undergrad.stanford.edu/advising/about-advising/advising-student-athletes) (AARC) who are general and specialized academic advisers for varsity student-athletes.

See the Advising web site (https://undergrad.stanford.edu/advising) for more information about academic advising, programming, and support for undergraduates.

**Academic Policy**

UAR oversees the implementation of University academic policies pertaining to undergraduates, including requests for exceptions to academic policy (i.e., petitions) and monitoring academic progress. All UAR advisers support students with an academic status (e.g., probation, provisional registration, or suspension). For more information about academic policies that UAR advisers help students navigate, see the Academic Policies (https://undergrad.stanford.edu/planning/academic-policies) web site.

**Undergraduate Research and Fellowships**

UAR encourages undergraduates to work with faculty on independent projects in research, the arts, and senior synthesis. UAR facilitates these close relationships by providing advising and funding to undergraduates across all disciplines and at all stages of developing an idea into a research project. See the Research and Independent Projects (https://undergradresearch.stanford.edu) web site for more information. For current deadlines, grant types, and program details, see the Student Grants (https://studentgrants.stanford.edu) page. Faculty or departments interested in applying for funding to support undergraduates in their working groups can learn more on the For Faculty (https://undergrad.stanford.edu/opportunities/research/faculty) page.

Together with advisers at the Overseas Resource Center (http://stanford.edu/dept/icenter/orc) and the Haas Center for Public Service (http://haas.stanford.edu), UAR advisers help prepare students to compete for nationally competitive fellowships. UAR also administers the campus nomination process for several U.S.-based fellowships. See the Fellowships (https://undergrad.stanford.edu/opportunities-research/fellowships) web site for more information on fellowship opportunities.

UAR offers workshops and individual consultations on planning for graduate or professional studies (e.g., business, education, law, and medicine) and on general application procedures, including how to write personal statements, how to solicit letters of recommendation, and how to prepare for interviews. See the Planning for Graduate and Professional School (https://undergrad.stanford.edu/opportunities-research/steps-planning-graduate-and-professional-school) web site for more information.
RESIDENTIAL PROGRAMS

Residential Programs

Program Director: Warren Chiang

Office: Sweet Hall, Garden Level

Residential Programs (ResProg) focuses on providing educational coherence for residential based programs, students and faculty. Integrated Learning Environment (ILE) and Summer Cohort Program are two primary areas that we integrate academic and residential experience. Immersion in the Arts: Living in Culture (ITALIC) and Structured Liberal Education (SLE) are two of the ILE programs that are academic year, immersive programs held in themed based dorms. Leland Scholars Program (LSP), is a four-week summer cohort intensive program also held in the residence. It facilitates the transition to college for incoming freshmen through carefully crafted activities, course work, discussions, and trips.

Structured Liberal Education

Director: Joshua Landy (French and Comparative Literature)

Associate Director: Greg Watkins

Lecturers: Michaela Hulstyn, Katerine Kretler, Jeremy Sabol, Ery Shin, Greg Watkins, Mary Garcia, Peter Mann

Offices: Sweet Hall, Second Floor, and Florence Moore Hall
Mail Code: 94305-8581
Phone: (650) 725-4790
Email: sle-program@stanford.edu
Web Site: http://sle.stanford.edu

The Program in Structured Liberal Education (SLE) is a year-long residence-based great works course that satisfies several requirements at once: Thinking Matters, Writing and Rhetoric (both PWR1 and PWR2), and four of the Ways requirements. The curriculum includes works of philosophy, literature, art, and music from the ancient world to the present. The program is interdisciplinary in approach; it emphasizes intellectual rigor and individualized contact between faculty and students.

SLE has two fundamental purposes: to develop a student's ability to ask effective questions of texts, teachers, the culture, and themselves; and to develop intellectual skills in critical reading, expository writing, logical reasoning, and group discussion. SLE encourages students to live a life of ideas in an atmosphere that stresses critical thinking and a tolerance for ambiguity. Neither the instructors nor the curriculum provides ready-made answers to the questions being dealt with; rather, SLE encourages a sense of intellectual challenge, student initiative, and originality.

The residence hall is the setting for lectures and small group discussions. SLE enhances the classroom experience with other educational activities, including a weekly film series, writing tutorials, occasional special events and field trips, and a student-produced play each quarter.

Freshmen interested in enrolling in SLE should indicate this preference for their Thinking Matters assignment. SLE is designed as a three quarter sequence, and students are expected to make a commitment for the entire year (8 units each quarter).

Immersion in the Arts: Living in Culture

Faculty Director: Karla Oeler (Art and Art History)

Associate Director: Kim Beil

Faculty: Nicholas Jenkins (English)

Lecturer: James Steichen

Program in Writing and Rhetoric Lecturer: Alexander Greenhough

Program in Writing and Rhetoric Lecturer: Alexander Greenhough

ITALIC is an arts-minded, residence-based academic program for first-year students. Using art as the frame for discussing big ideas, frosh who participate in this yearlong academic program are part of a tight-knit community, living together, attending classes, and making art in Stern Hall's Burbank House residence.

ITALIC is built around a series of big questions about the historical, critical, and practical purposes of art. The yearlong experience also fosters close exchanges between students and faculty, guest artists and scholars outside of class over meals, in hands-on arts-making workshops, and on excursions to arts events.

In ITALIC, students look closely at the integration of arts across the University and in the world outside, examining how art can illuminate or challenge existing categories of knowledge, including history, politics, and culture, particularly since the 19th century. Immersed in the arts, they analyze major works of the visual, performing, and filmic arts, sharpen perceptual skills, and tap into their own channels of creative expression. Turning an aesthetic lens on life’s ordinary and exceptional features, ITALIC asks: How do the arts provide new ways of thinking about our world and ourselves?

Leland Scholars Program

Offices: Sweet Hall, Garden Level
Mail code: 94305-3092
Email: lelandscholars@stanford.edu
Web Site: http://lelandscholars.stanford.edu

In recognizing the need to prepare first year students for the academic, intellectual, social, and personal challenges they will face at Stanford, the Leland Scholars Program (LSP) facilitates the transition to college for incoming freshmen who may be the first in their family to attend college or attended under-resourced schools or communities. Scholars will participate in a four-week residential program in the summer prior to arrival on campus. This fully-funded program has a carefully crafted schedule of activities, coursework, discussions, and trips designed to support the transition to Stanford. During the academic year, Leland Scholars will have access to additional advising and freshman seminars.
that sustain the community and reinforce the skills and strategies acquired during the program.
STANFORD IN NEW YORK

Stanford in New York presents students with distinctive opportunities for engagement within one of the world's most dynamic cities. Through an intensive academic quarter of study, reflective practice, and experiential learning in New York, students hone their intellectual skills and capacities, develop their abilities as adaptive learners, and enlarge their creative confidence.

Stanford in New York features guided internships in fields such as the arts, urban studies, media, and finance for which New York offers unparalleled opportunities. Through supportive mentoring, participants translate their academic knowledge and skills into potential career paths.

The program is offered during the following quarters:

- Autumn, Winter, and Spring quarters

Areas of study for both course work and internships are organized by quarter.

- Autumn Quarter focus: The Arts, Architecture, Design, and Urban studies
- Winter Quarter focus: Finance and Media
- Spring Quarter: The Global City

Program Director: Rosina Miller

Program Faculty: Autumn Quarter: Arthur Cohen, Nina Freedman, Danielle Jackson, Julie Orringer

Winter Quarter: Tony Haile, Bill Grueskin, Danielle Jackson, Mark Oldman, Allen Thorpe

Spring Quarter: tba
Reserve Officers’ Training Corps (ROTC) Cross-Enrollment Agreements for ROTC

Stanford has cross-enrollment agreements for the Reserve Officers’ Training Corps (ROTC) with the Navy and Marine Corps ROTC program at the University of California at Berkeley, the Army ROTC program at Santa Clara University, and the Air Force ROTC program at San Jose State University. These agreements allow Stanford students to engage in military training while working on their degrees from Stanford. Courses taken in ROTC programs are offered by and through UC Berkeley, Santa Clara, and San Jose State. Most courses count for academic or activity credit and count toward the 12-unit requirement for full-time registration status and satisfactory academic progress requirements for Stanford undergraduates.

Normally, students who participate in ROTC training complete a four-year course of instruction at the respective institution that consists of two years of basic courses during the freshmen and sophomore years, and an advanced course of instruction during the junior and senior years. Students who accept ROTC scholarships are generally subject to a service obligation, depending on the regulations of the particular service.

Stanford students who are enrolled in ROTC programs under the cross-enrollment agreements are eligible to compete for various scholarships that provide up to full tuition and a monthly stipend. Students normally compete for national scholarships as high school seniors, although current Stanford students may be eligible to enroll in ROTC on a non-scholarship basis. Non-scholarship ROTC students are eligible to compete for scholarships, and individual services may offer additional scholarship programs to current qualifying undergraduate and graduate students. Interested students should contact the appropriate military branch at the host institution to obtain information on these programs and to initiate application procedures.

Students who satisfactorily complete an ROTC program and are awarded a Stanford degree qualify for a commission as a Second Lieutenant in the U.S. Army, an Ensign in the U.S. Navy, a Second Lieutenant in the U.S. Marines, or a Second Lieutenant in the U.S. Air Force.

For additional questions concerning the ROTC programs, Stanford students should consult with one of the host units.

Academic Credit

All three service programs have a mandatory lab course each quarter which carries 1 unit of activity credit for satisfactory completion of work. Although there is no limitation on the number of activity classes in which a student may enroll, no more than 8 units of these activity classes (and/or other university activity classes) may be applied toward undergraduate graduation requirements (see the Undergraduate Degrees (p. 35) section of this bulletin).

Upper level ROTC academic courses carry two units of credit for satisfactory completion of work and are graded on a credit/no credit basis. No more than 36 units without a letter grade may be applied toward undergraduate graduation requirements (see the Undergraduate Degrees (p. 35) section of this bulletin).

Air Force ROTC

Commanding Officer: Lieutenant Colonel Michael E. Pecher

Air Force ROTC courses are offered at San Jose State University. See also the SJSU website (http://www.sjsu.edu/afrotc).

Courses in the freshman year focus on the foundation of the United States Air Force and introduce students to the Air Force and AFROTC. Topics include the characteristics, missions, and organization of the Air Force, the qualities of an officer and professionalism, career opportunities, military customs and courtesies, and communication skills.

Courses in the sophomore year focus on the evolution of the United States air and space power. Students study air and space power through historical analysis and examine the capabilities, function, and doctrinal employment of aerospace forces. The course emphasizes oral and written communication skills.

Courses in the junior year focus on Air Force leadership studies. Topics include leadership, management fundamentals, professional knowledge, Air Force personnel system, ethics, and communications. Students apply knowledge and skills required of junior Air Force officers through case studies, practical exercises, and seminar discussion.

Senior year courses cover two subjects, national security affairs and preparation for active duty. Students learn about national security process, international and regional relations, advanced leadership ethics, Air Force doctrine with focus on the military as a profession, military justice, civilian control of the military, and current issues affecting the military. Preparation for active duty focuses on the role of the Air Force officer in contemporary society emphasizing skills to facilitate a smooth transition from civilian to military life.

The leadership laboratory is required for all students every quarter. Students participate in hands-on exercises to learn drill and ceremony; Air Force customs and courtesies; leadership and followership skills; and they hear from guest speakers on a variety of Air Force topics.

Army ROTC

Commanding Officer: Lieutenant Colonel John Tiedeman

Some Army ROTC courses are offered at Santa Clara University and some are offered on Stanford’s campus. See also the Army ROTC web site (http://www.scu.edu/rotc).

Freshman year courses introduce students to leadership and personal development and provide foundations for leadership. Course topics include personal challenges and competencies for effective leadership, goal setting, time management, physical fitness, and stress management related to leadership and officership. Students develop a personal fitness program under the guidance of an Army master fitness trainer. In addition, they learn leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback, and effective writing skills in the context of practical and interactive exercises.

Army courses taught in the sophomore year look at leadership through a variety of lenses using case study and interactive exercises. Topics include creative and innovative leadership strategies and styles, challenges of leading in contemporary operational environments along with crosscultural challenges, and team leading procedures.

In the junior year, students learn adaptive team leadership and situational leadership. They develop skills including decision making, persuading, and motivating team members when under fire in small-unit tactical operations scenarios.

Courses for seniors provide capstone leadership instruction and experiences in a practical and current event driven context. Students plan, execute, and assess complex operations, function as a member of staff, and provide leadership performance feedback to subordinates. They use case studies, scenarios, and exercises to prepare for their first unit assignment and the transition to commissioned officer in a modern world.
All students are also required to take a military history course focused on leadership. This course may be taken any year. The leadership laboratory is required for all students every quarter. In addition, students complete a four-day weekend field training exercise away from the University in the Autumn and Spring quarters, and a formal military dinner during an evening in the Winter Quarter.

**Naval ROTC**

*Commanding Officer:* Captain William Koyama

Naval ROTC courses are offered at the University of California at Berkeley. See also the Naval ROTC web site.

Courses in the freshman year introduce students to the Navy and Marine Corps and to the NROTC program. They also study sea power from a historical and United States centered perspective.

In the sophomore year, students take their first leadership class with a focus on management and their first navigation class with a focus on the fundamentals of nautical navigation. Courses include case studies, student presentations, and practical exercises.

Juniors study introductory naval engineering with a focus on ship systems and modern weapons systems. Example topics include gas turbine propulsion systems, nuclear reactors, and radar and sonar theory.

During their senior year, students study advanced leadership topics within an ethics framework and advanced navigation and naval operations.

Students pursuing a commission in the Marine Corps do not take the two engineering courses or the two navigation courses. Marine option students take two Marine Corps specific courses that examine the history of littoral warfare and the evolution of warfare.

All students are required to take the weekly professional development laboratory course (drill) at UC Berkeley every quarter.
Graduate Education (VPGE)

The Office of the Vice Provost for Graduate Education (VPGE) works collaboratively to ensure that every graduate student has the best possible education. VPGE's initiatives and resources enrich students' academic experiences at Stanford, advancing diversity, preparing leaders, and positioning Stanford at the forefront of innovation in graduate education. VPGE serves Stanford's doctoral, master's, and professional degree students from all seven Stanford schools. VPGE plays a leadership role in initiating and managing policies and programs that enhance and complement the offerings of the departments and programs that have primary responsibility for organizing and delivering graduate education.

In addition to providing University-wide graduate policy direction, the VPGE office has five primary areas of program activity: administering University-wide graduate fellowship programs; advancing graduate student diversity; providing professional development programs and events; promoting interdisciplinary and cross-school learning; and encouraging innovation in graduate programs. The Vice Provost for Graduate Education reports to the Provost.

Graduate Policy

The Faculty Senate Committee on Graduate Studies (https://registrar.stanford.edu/faculty/academic-senate-committees/committee-graduate-studies-c-gs) (C-GS) formulates policy governing the substance and process of graduate education, including dissertation committees, joint degree programs, candidacy issues, and the academic calendar. C-GS is also charged to review graduate interdisciplinary programs (IDPs) in order to recommend renewals or discontinuation of the IDPs and to receive proposals for new IDPs. Committee members include the Vice Provost for Graduate Education or delegated staff (ex officio) and representatives from the faculty at large appointed by the Faculty Senate, administration such as the Office of the University Registrar (ex officio), and students. The Graduate Student Council and the Nominations Committee of the Associated Students of Stanford University (ASSU) choose student members.

Academic Policies

VPGE recommends, promulgates, and interprets University policies related to graduate education. The Graduate Academic Policies and Procedures (http://gap.stanford.edu) (GAP) handbook is the primary source for policies affecting all Stanford graduate students, including policies recommended by C-GS and approved by the Faculty Senate. Several policies referenced frequently include:

General Requirements, Progress and Milestones

Degree-Specific Requirements, Progress and Milestones

Policies specifically related to master's, coterminal, professional, doctoral, and joint degrees including doctoral dissertation policies; see GAP 4. Degree-Specific Requirements, Progress and Milestones (https://gap.stanford.edu/handbooks/gap-handbook/chapter-4).

Changes of Enrollment Status

Policies related to degree or enrollment changes, degree conferral, leaves of absence or discontinuations, exchange programs, and pregnancy, childbirth and adoption; see GAP 5. Changes of Enrollment Status (https://gap.stanford.edu/handbooks/gap-handbook/chapter-5).

Graduate Student Funding

Policies related to graduate student funding including fellowships and research and teaching assistantships; see GAP 7. Graduate Student Funding (https://gap.stanford.edu/handbooks/gap-handbook/chapter-7).

Academic Advising

The University policies on advising and the conduct of research listed below apply to all faculty and the graduate students they advise. In addition, departments and programs may establish specific expectations and requirements for academic advising, and should inform graduate students and faculty of these policies. Additional information and resources about advising can be found on the VPGE's Advising & Mentoring web pages (https://vpge.stanford.edu/academic-guidance/advising-mentoring).

Policy specifying that all matriculated graduate students must be advised by a faculty member, to be designated within students’ first quarter of enrollment; see GAP 3.3. Academic Advising (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3).

Stanford's policies and practices related to the conduct of research, including obligations to students, staff, and sponsors; see Research Policy Handbook 1. Conduct of Research (https://doesearch.stanford.edu/policies/research-policy-handbook/conduct-research).

Policy articulating that all members of the Stanford community are responsible for sustaining the University’s highest ethical standards and values; see Administrative Guide 1.1.1. University Code of Conduct (https://adminguide.stanford.edu/chapter-1/subchapter-1/policy-1-1-1).

Elaboration of the GAP Academic Advising policy, including change of adviser procedures; see Stanford Bulletin: Graduate Degrees. Advising and Credentials (http://exploredegrees.stanford.edu/graduatedegrees/#advisingandcredentialstext).

The ExploreDegrees section of this bulletin outlines University-level policies guiding admissions, financial aid, enrollment, degree progress, and graduation. The graduate programs sections of each department's listing outlines specific department degree requirements. Additional information on professional school programs is available from the Graduate School of Business, the School of Law, and the School of Medicine.

Graduate students must also follow the University's Honor Code and Fundamental Standard (https://communitystandards.stanford.edu/student-conduct-process/honor-code-and-fundamental-standard), which establishes the conditions for academic work and sets the standard of conduct for students at Stanford, respectively. The interpretations and applications of the Honor Code, the Student Judicial Charter of 1997, the Student Conduct Penalty Code, statistics, and other documents are available through the Office of Community Standards (https://communitystandards.stanford.edu).

Research Policies

Graduate education and research are interrelated enterprises. Many Stanford graduate students conduct research under the guidance and sponsorship of Stanford faculty members. The Research Policy Handbook (https://doesearch.stanford.edu/policies) (RPH), overseen by the Office of the Vice Provost and Dean of Research, articulates policies governing research. Several policies that are most relevant to graduate education include:

Academic Authorship

Guidelines related to academic authorship, such as the allocation of responsibility and credit for scholarly publications; see Research Policy Handbook memo 1.5, On Academic Authorship (http://
doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/academic-authorship).

**Intellectual Property**

Policies on copyrights and patents resulting from University work. Graduate students and postdoctoral scholars, as well as all faculty, staff, and visitors engaged in research, must sign the Stanford University Patent and Copyright Agreement (SU-18). For complete text of the currently applicable versions of these policies, see Research Policy Handbook chapter 9, Intellectual Property (http://doresearch.stanford.edu/policies/research-policy-handbook/intellectual-property).

**Openness in Research**

Policy on openness in research, such as the principle of freedom of access by all interested persons to the underlying data, processes, and final results of research. Stanford University does not accept funding for research projects that require secrecy. For complete text of the currently applicable version of this policy, see Research Policy Handbook memo 1.4, Openness in Research (http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/openness-research).

**Relationships between Students and Outside Organizations**

Summary of policies on the establishment of relationships between students and outside entities, such as private companies or nonprofit organizations, as part of or outside the student's academic program at Stanford. This covers open versus proprietary nature of the work, ownership of intellectual property, and possible conflicts of commitment and interest. For complete text of the currently applicable versions of these policies, see Research Policy Handbook memo 10.6, Relationships Between Students (Including Postdoctoral Scholars) and Outside Entities (http://doresearch.stanford.edu/policies/research-policy-handbook/non-faculty-research-appointments/relationships-between-students).

**Research Compliance**

Several administrative panels review and approve research projects to safeguard the rights and welfare of all human research subjects, ensure the humane care and use of laboratory animals, and protect the safety of personnel and the general public in the areas of biosafety and radiological safety. For more information, contact the Research Compliance Office (http://researchcompliance.stanford.edu).

**Research Misconduct**

Policy on allegations, investigations, and reporting of research misconduct. Each member of the University community has a responsibility to foster an environment which promotes intellectual honesty and integrity, and which does not tolerate misconduct in any aspect of research or scholarly endeavor. For complete text of the currently applicable version of this policy, see Research Policy Handbook memo 1.7, Research Misconduct: Policy on Allegations, Investigations and Reporting (http://doresearch.stanford.edu/policies/research-policy-handbook/conduct-research/research-misconduct-policy-allegations).

**Graduate Fellowships**

Several University-wide graduate fellowship programs are administered by VPGE.

The Stanford Graduate Fellowship in Science and Engineering (http://sgf.stanford.edu) (SGF) program awards approximately 100 two- and three-year fellowships providing tuition support and stipend to exceptional incoming and continuing doctoral students in the natural and social sciences, education, engineering, and the basic sciences in the School of Medicine.

The Stanford Interdisciplinary Graduate Fellowship (http://sigf.stanford.edu) (SIGF) program awards fellowships on a competitive basis to doctoral students engaged in interdisciplinary research that crosses traditional disciplinary boundaries. Students in the first three years of their doctoral program are eligible to apply.

VPGE also administers several smaller University-wide fellowships programs to new and continuing doctoral students, either by application or by nomination by faculty or deans.

**Graduate Student Diversity**

VPGE works to diversify the graduate student population by supporting recruitment and retention programs in collaboration with faculty and staff in each of the schools. VPGE funds recruitment activities to expand the pool of qualified applicants, such as visits to campus and travel grants.

The EDGE (Enhancing Diversity in Graduate Education) Doctoral Fellowship (https://vpge.stanford.edu/fellowships-funding/enhancing-diversity-graduate) program supports the recruitment and academic success of outstanding doctoral students who have the potential to enhance the diversity, broadly defined, of their academic disciplines and fields.

VPGE also works collaboratively to develop programs that improve retention in graduate school and cultivate interest in academic careers and diversify the pipeline for future faculty.

The DARE (Diversifying Academia, Recruiting Excellence) Doctoral Fellowship Program (https://vpge.stanford.edu/fellowships-funding/dare) awards two-year fellowships to advanced doctoral students who want to investigate and prepare for academic careers and whose presence will help diversify the professoriate.

**Professional Development**

Leadership, pedagogy, communication, working in teams, career development, and entrepreneurship are topics of interest to graduate students across the University. VPGE collaborates with many campus partners to raise the visibility and expand the breadth of offerings to support graduate students' professional development and academic success. VPGE developed the interactive Graduate Professional Development Framework (https://vpge.stanford.edu/professional-development/framework) to help graduate students navigate graduate school and locate resources for acquiring the skills and experiences they need to succeed at Stanford and in their future careers.

**Interdisciplinary Learning**

VPGE provides seed funding to initiatives that foster interdisciplinary and cross-school learning opportunities and networking for graduate students. The Stanford Graduate Summer Institute (http://sgsi.stanford.edu) (SGSI) offers noncredit interdisciplinary short courses exclusively for Stanford graduate students and postdoctoral scholars. VPGE also seeks to facilitate enrollment in courses outside of students’ home departments and schools.

**Innovation in Graduate Programs**

Academic departments and programs are foundational to graduate education at Stanford. VPGE supports faculty- and student-initiated innovations within and across degree-granting programs.

SCORE (Strengthening the Core) Academic Innovation Funds (https://vpge.stanford.edu/fellowships-funding/score) support one-year, faculty-led projects that explore and experiment with new approaches to graduate education.

Student Projects for Intellectual Community Enhancement (https://vpge.stanford.edu/fellowships-funding/student-projects-intellectual) (SPICE) funds allow graduate students to develop projects
and activities that promote intellectual community in their departments and beyond.

The Diversity and Inclusion Innovation Fund (https://vpge.stanford.edu/fellowships-funding/diversity-innovation-funds) (DIF) supports Stanford graduate students and postdoctoral scholars in the development of projects that advance diversity within those populations.

Vice Provost for Graduate Education: Patricia J. Gumport

Associate Vice Provosts for Graduate Education: John Boothroyd, Helen J. Doyle

Director of Finance, Fellowships, and Operations: Rebecca Jantzen

Assistant Vice Provosts: Chris Gonzalez Clarke, Anika Green
TEACHING AND LEARNING (VPTL)

The Office of the Vice Provost for Teaching and Learning (VPTL) promotes and advances the vibrant, intellectual endeavor of teaching and learning at Stanford.

VPTL provides essential resources and learning support services to Stanford students through its student learning center at Lathrop Library, including:

- peer tutoring (https://undergrad.stanford.edu/tutoring-support/tutoring) in subjects
- academic skills coaching (http://exploredegrees.stanford.edu/teachingandlearning/academicskills.stanford.edu)
- student study space

In addition, VPTL provides residential computing (https://vptl.stanford.edu/teaching-and-learning-innovation/learning-environments/physical-classroom-and-labs/residential) and networking support (https://vptl.stanford.edu/student-resources/computers-printing/network-connections) through Resident Computer Consultants (RCCs), and computing and printing (https://vptl.stanford.edu/printing-resources) services in clusters located throughout campus. VPTL offers a range of student jobs (https://vptl.stanford.edu/job-listings) and internships, and credit-bearing courses to enrolled Stanford students.

In addition to student services, VPTL staff members collaborate (https://vptl.stanford.edu/teaching-innovation-and-practice) with faculty, instructors, and departments to enrich the depth and range of Stanford learning experiences, from classroom practice to classroom technology adoption, from course design to curriculum transformation, and from digital learning initiatives to research-driven learning innovation.

VPTL is developing new learning spaces (https://vptl.stanford.edu/learning-spaces), from flexible classrooms and laboratories to online platforms. It also helps faculty develop new modes of learning and learning content, for example online, flipped, and blended courses that are made available to Stanford students through the SUClass (https://suclass.stanford.edu) instance of the Lagunita online learning platform.

Instructors

Senior Director of Learning Experience Design: Robyn Wright Dunbar

Director of Educational Programs: Mariatte Denman

Director of Faculty Teaching Programs: Jennifer Randall Crosby

Associate Director of Graduate Teaching & Peer Learning Programs: Tim Randazzo
GRADUATE SCHOOL OF BUSINESS

The mission of the Stanford Graduate School of Business is to create ideas that deepen and advance the understanding of management, and with these ideas, develop innovative, principled, and insightful leaders who change the world.

The two-year Master of Business Administration (M.B.A.) degree program prepares change agents to make a meaningful impact in the world through leadership of business, government, and social-sector organizations. The general management curriculum rests on a foundation of social science principles and management functions, tailored to each student’s background and aspirations. Interdisciplinary themes of critical analytical thinking, creativity and innovation, and personal leadership development differentiate the Stanford M.B.A. experience. Each M.B.A. student undertakes a global experience to provide direct exposure to the world’s opportunities. A Joint Degree Program (p. 54) allows Stanford students to combine the M.B.A. with degrees in the Graduate School of Education (M.A.), the School of Engineering (M.S. in C.S., M.S. in E.E.), the Stanford Law School (J.D.) as well as interdisciplinary degrees in Public Policy (M.P.P.) and in Environment and Resources (M.S.). Dual Degree programs are offered with the School of Medicine (M.D./M.B.A.) and the program in International Policy Studies (M.A. in IPS/M.B.A.).

The primary criteria for admission are intellectual vitality, demonstrated leadership potential, and personal qualities and contributions. No specific undergraduate major or courses are required for admission, but experience with analytic and quantitative concepts is important. Almost all students obtain one or more years of work experience before entering, but a few students enroll directly following undergraduate study.

The Stanford Master of Science in Management for Experienced Leaders Program (MX) is an intensive, one-year course of study for middle-management executives leading to the degree of Master of Science in management. Participants generally have eight or more years of work experience, with at least five years of management experience. Some students are sponsored by their company, but most are self-sponsored.

The Doctor of Philosophy (Ph.D) degree program is designed to develop outstanding scholars for careers in research and teaching in various fields of study associated with business education. Students focus on one of seven discrete areas of study including accounting, economic analysis and policy, finance, marketing, operations information and technology, organizational behavior, and political economy.

For detailed information on programs, curricula, and faculty, see the School's (http://gsb.stanford.edu) web site.

Dean: Jonathan D. Levin

Senior Associate Deans: Yossi Feinberg, Maureen McNichols, Paul Pfleiderer, Sarah A. Soule

Associate Deans: Rajkumar Chellarak, Stephanie Frost, Page Heltz, Ranga Jayaraman, Dave Weinstein

Assistants: Margaret Hayes, Mavee Richard, Charlotte Toksvig, Wendy York-Fess

Assistant Professors: Mohammad Akbarpour, Stephen Anderson-Macdonald, Juliane Begena, Justin Berg, David Brockman, Svetlana Bryzgalova, Jung Ho Choi, Sebastian Di Tella, Rebecca Diamond, John-Paul Ferguson, Octavia D. Foarta, Brandon Gipper, Yonatan Gur, Benjamin Hebert, Michal Kosinski, Nicholas S. Lambert, Rebecca Lester, Timothy McCuaide, Aruna Ranganathan, Daniela Saban, Paul Somani, Adina Sterling, Victoria Vanasco, Stefan Wag, Kuang Xu

Adjunct Professors: H. Irving Grousbeck, Joel C. Peterson, Mark A. Wolfson

Visiting Professors: Henri-Claude De Bettignies, Joao de Figueiredo

Adjunct Lecturer: Kathryn Kostopoulos Amarotico

* Recalled to active duty. ** Emeritus Professor from another SU department recalled to active duty.
SCHOOL OF EARTH, ENERGY AND ENVIRONMENTAL SCIENCES

The School of Earth, Energy and Environmental Sciences (formerly the School of Earth Sciences) lists courses under the subject code EARTH on the Stanford Bulletin’s ExploreCourses web site. Courses offered by the School’s departments and inter-departmental programs are linked on their separate sections, and are available at the ExploreCourses (http://explorecourses.stanford.edu) web site.

The School of Earth, Energy and Environmental Sciences includes the departments of Geological Sciences, Geophysics, Energy Resources Engineering (formerly Petroleum Engineering), and Earth System Science; and three interdisciplinary programs: the Earth Systems undergraduate B.S. and coterminal M.A. and M.S. programs, the Emmett Interdisciplinary Program in Environment and Resources (E-IPER) with Ph.D. and joint M.S. and the Sustainability and Science Practice Program with coterminal M.A. and M.S. programs.

The aims of the school and its programs are:

1. to prepare students for careers in the fields of agricultural science and policy, biogeochemistry, climate science, energy resource engineering, environmental science and policy, environmental communications, geology, geobiology, geochemistry, geomechanics, geophysics, geostatistics, sustainability science, hydrogeology, land science, oceanography, paleontology, petroleum engineering, and petroleum geology;
2. to conduct disciplinary and interdisciplinary research on a range of questions related to Earth, its resources and its environment;
3. to provide opportunities for Stanford undergraduate and graduate students to learn about the planet’s history, to understand the energy and resource bases that support humanity, to address the geological and geophysical, and human-caused hazards that affect human societies, and to understand the challenges and develop solutions related to environment and sustainability.

To accomplish these objectives, the school offers a variety of programs adaptable to the needs of the individual student:

- four-year undergraduate programs leading to the degree of Bachelor of Science (B.S.)
- five-year programs leading to the coterminal Bachelor of Science and Master of Science (M.S.)
- five-year programs leading to the coterminal Bachelor of Science and Master of Arts (M.A.)
- graduate programs offering the degrees of Master of Science, Engineer, and Doctor of Philosophy.

Details of individual degree programs are found in the section for each department or program.

Undergraduate Programs in the School of Earth, Energy and Environmental Sciences

Any undergraduate admitted to the University may declare a major in one of the school’s departments or the Earth Systems Program by contacting the appropriate department or program office.

Requirements for the B.S. degree are listed in each department or program section. Departmental academic advisers work with students to define a career or academic goal and assure that the student’s curricular choices are appropriate to the pursuit of that goal. Advisers can help devise a sensible and enjoyable course of study that meets degree requirements and provides the student with opportunities to experience advanced courses, seminars, and research projects. To maximize such opportunities, students are encouraged to complete basic science and mathematics courses in high school or during their freshman year.

Coterminal Master’s Degrees in the School of Earth, Energy and Environmental Sciences

The Stanford coterminal degree program enables an undergraduate to embark on an integrated program of study leading to the master’s degree before requirements for the bachelor’s degree have been completed. This may result in more expeditious progress towards the advanced degree than would otherwise be possible, making the program especially important to Earth scientists because the master’s degree provides an excellent basis for entry into the profession. The coterminal plan permits students to apply for admission to a master’s program after earning 120 units, completion of six non-summer quarters, and declaration of an undergraduate major, but no later than the quarter prior to the expected completion of the undergraduate degree.

The student may meet the degree requirements in the more advantageous of the following two ways: by first completing the 180 units required for the B.S. degree and then completing the three quarters required for the M.S. or the M.A. degree; or by completing a total of 15 quarters during which the requirements for the two degrees are completed concurrently. In either case, the student has the option of receiving the B.S. degree upon meeting all the B.S. requirements or of receiving both degrees at the end of the coterminal program.

Students earn degrees in the same department or program, in two different departments, or even in different schools; for example, a B.S. in Physics and an M.S. in Geological Sciences. Students are encouraged to discuss the coterminal program with their advisers during their junior year. Additional information is available in the individual department offices.

University requirements for the coterminal master’s degree are described in the "Coterminal Master’s Program (p. 46)" section. University requirements for the master’s degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

Graduate Programs in the School of Earth, Energy and Environmental Sciences

Admission to the Graduate Program

A student who wishes to enroll for graduate work in the school must be qualified for graduate standing in the University and also must be accepted by one of the school’s four departments or the Emmett Interdisciplinary Ph.D. program. One requirement for admission is submission of scores on the verbal and quantitative sections of the Graduate Record Exam. Admission to one department of the school does not guarantee admission to other departments.

Faculty Adviser

Upon entering a graduate program, the student should report to the head of the department or program who arranges with a member of the faculty to act as the student’s adviser. Alternatively, in several of the departments, advisers are established through student-faculty discussions prior to admission. The student, in consultation with the adviser(s), then arranges a course of study for the first quarter and ultimately develops a complete plan of study for the degree sought.
Financial Aid
Detailed information on scholarships, fellowships, and research grants is available from the school's individual departments and programs.

Dean: Pamela A. Matson (through December 31, 2017), Stephan A. Graham (effective November 2, 2017)

Associate Dean, Academic Affairs: Scott Fendorf

Senior Associate Dean, Educational Initiatives: Margot Gerritsen

Associate Dean, Educational Initiatives: Robyn Dunbar

Assistant Dean, Multicultural Affairs: Tenea M. Nelson

Lecturer: Jennifer Saltzman
Earth System Science

Courses offered by the Department of Earth System Science are listed under the subject code ESS on the Stanford Bulletin’s ExploreCourses web site.

On April 16, 2015, the Senate of the Academic Council approved the change of name for the department to become the Department of Earth System Science. Prior to April 16, the department was named the Department of Environmental Earth System Science.

Earth System Science studies the planet’s oceans, lands, and atmosphere as an integrated system, with an emphasis on changes occurring during the current period of overwhelming human influence, the Anthropocene. Faculty and students within the department use the principles of biology, chemistry, and physics to study problems involving processes occurring at the Earth’s surface, such as climate change and global nutrient cycles, providing a foundation for problem solving related to environmental sustainability and global environmental change.

Graduate Programs in Earth System Science

The University’s basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin. The Department of Earth System Science does not offer coterminal admission to the master’s in Earth System Science.

Learning Objectives (Graduate)

The objectives of the doctoral program in Earth System Science are to enable students to develop the skills needed to conduct original investigations in environmental and earth system sciences, to interpret the results, and to present the data and conclusions in a publishable manner. Graduates should develop strong communication skills with the ability to teach and communicate effectively with the public.

The objectives of the master’s program in Earth System Science is to continue a student’s training in one of the earth science disciplines and to prepare students for a professional career or doctoral studies.

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Earth System Science. Students who matriculated into the Master of Science in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

Master of Science in Earth System Science

The University’s requirements for M.S. degrees are outlined in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

Unit Requirements

1. A minimum of 45 units of course work at the 100 level or above.
2. Half of the courses used to satisfy the 45-unit requirement must be intended primarily for graduate students, usually at the 200 level or above.
3. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
4. Some students may be required to make up background deficiencies in addition to these basic requirements.
5. By the end of Winter Quarter of the first year in residence, a student must complete at least three courses taught by a minimum of two different department faculty members.

Teaching Assistantship

As a program requirement, advanced degree candidates in ESS complete TA-appointed (25%) quarters at a minimum of: 2 for Ph.D. students and 1 for master’s students, to be completed over the course of study. In addition, additional TA quarters may be considered and/or required in consultation with the research adviser, depending on academic goals, funding availability, or the requirements of individual doctoral programs.
Advising
The department’s graduate coordinator, in coordination with the departmental faculty, appoints an academic adviser prior to registration with appropriate consideration of the student’s background, interests, and professional goals. In consultation with the adviser, the student plans a program of course work for the first year. The faculty adviser is charged with designing the curriculum in consultation with the student specific to the research topic.

Thesis
Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the second year of residence. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis who must be approved by the graduate coordinator; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

Master of Science, Course Work Only Option for ESS Ph.D. Students
The course-work-only M.S. for ESS Ph.D. students requires 45 unduplicated units of which all 45 must be course work (non-research, non-independent study, non-thesis units). All required units must be in courses at the 100-level or above. 50 percent of those units must be in graduate-level courses (generally, at the 200-level or above). No units are awarded for course work completed elsewhere (i.e., not eligible to transfer-in units). All 45 units can be applied to the 135 unit requirement for the Ph.D. The remaining 90 units can consist of all research units.

On April 16, 2015, the Senate of the Academic Council approved the Doctor of Philosophy in Earth System Science. Students who matriculated into the Doctor of Philosophy in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

Doctor of Philosophy in Earth System Science
The University’s requirements for the Ph.D. degree are outlined in the “Graduate Degrees [http://www.stanford.edu/dept/registrar/bulletin/4901.htm]” section of this bulletin.

Admission
For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

Unit Requirements
1. A minimum of 135 units of graduate study at Stanford must be satisfactorily completed.
2. Required courses must be taken for a letter grade, if offered.
3. Ph.D. students registered for 10 units must pass at least 6 units per quarter. Students must maintain at least a 3.0 grade point average.
4. Ph.D. students must complete a minimum of four graduate level, letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University.

5. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different ESS faculty members.

Teaching Assistantship
As a program requirement, advanced degree candidates in ESS complete TA-appointed (25%) quarters at a minimum of: 2 for Ph.D. students and 1 for master’s students, to be completed over the course of study. In addition, additional TA quarters may be considered and/or required in consultation with the research advisor, depending on academic goals, funding availability, or the requirements of individual doctoral programs.

Annual Review
Each year, the department evaluates students to assess progress to degree, identify areas of strength, provide helpful resources, and note potential issues or areas of concern. This annual review includes a record of accomplishments presented by the student, written evaluations by the faculty adviser of the student’s progress, and committee feedback on the academic and research progress of the student. The student should have no “I” grades in core courses, must maintain at least a 3.0 grade-point average, and show evidence of productive and sustained research progress, with no conflict of interest or conflict of commitment.
Possible outcomes of the annual review include: (1) continuation of the student in good standing, and (2) placing the student on probation, with specific written guidelines of the period of probation and the necessary steps for reinstatement to good standing.

Annual reviews are required for all Ph.D. students, including first-year Ph.D. students. In the first year, the annual review is conducted between the student and the Ph.D. adviser(s) (prior to forming a doctoral committee). After the first year, the annual review must be conducted between the student and the student’s doctoral committee. In all years, the written annual review form must be completed and signed by both the student and the adviser.

In the year in which students are undertaking their candidacy exam (research qualifying exam), that exam serves as the annual review. In addition, any student who has scheduled the dissertation defense and petitioned to graduate in Axess may elect not to hold an additional annual review meeting. Annual reviews that are not the qualifying exam or dissertation defense should take place in the Autumn or Winter Quarter (with the exception of first-year students, who may hold their annual review meeting with their adviser(s) in Spring Quarter).

Candidacy and Qualification Exam
Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty in the department or school of the student’s potential to successfully complete the requirements of the degree program. Candidacy is valid for five calendar years (through the end of the quarter in which candidacy expires), unless terminated by the department (for example, for unsatisfactory progress). University policy requires completion of the department qualifying procedures and application for candidacy by the end of the second year in the Ph.D. program. Therefore, it is strongly advised that the qualifying exam be taken during the fifth (non-Summer) quarter so that the student may retake the exam in the case of inadequate performance and still advance to candidacy by the end of the sixth (non-Summer) quarter.

Students must present a draft proposal to their adviser in a timely fashion, and take account of the adviser’s comments and require revisions before preparing a final draft. The student submits a copy of the final draft of the research proposal to each member of the examining committee at least two weeks before the scheduled date of the examination.

The qualifying exam is an oral exam based on the candidate’s written research proposal. The exam is a test of the student’s ability to recognize, evaluate, and plan a significant research project and his/her mastery of fields essential to the completion of research. The research proposal must provide a concise review of the background literature, and must discuss the proposed problem, its importance, and the methods to be applied to its examination. The methods should be made clear. The proposal must contain a timetable and, if appropriate, the student should discuss such matters as funding, field logistics, laboratory scheduling, and availability of equipment. The proposal must be well thought out, carefully written and edited, and finished with appropriate references and illustrations. It must not exceed 15 double-spaced pages in length, exclusive of figures and bibliography. The qualifying exam is oral and consists of three parts:

1. A presentation of the proposed research (no more than 30 minutes duration);
2. An examination of the candidate on the merits of the proposal, touching on but not limited to the aspects listed in the proposal; and
3. An examination of any subject matter judged by committee members to be relevant to the student’s ability to carry out the proposed research.

It is recognized that, in practice, parts 1#3 may not be entirely separate and distinct. The entire examination lasts no less than 2 hours and no more than 3 hours; the examination under part 3 is at least one hour. No part of examination is public.

Doctoral Dissertation and Oral Defense
Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research; curriculum must also be developed with the supervision of the committee, which should be designed to provide a rigorous foundation for the research area. The format of the dissertation must meet University guidelines. The student is urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

The doctoral dissertation is defended in the University oral examination. The department appoints the research adviser and two other members of the research committee to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

Chair: Robert Jackson

Professors: Kevin Arrigo, C. Page Chamberlain, Noah Diffenbaugh, Robert Dunbar, Scott Fendorf, Christopher Field, Steven Gorelick, Robert Jackson, Eric Lambin, Pamela Matson (Dean through December 31, 2017), Rosamond Naylor

5 Joint appointment with Statistics
EARTH SYSTEMS

Mission of the Undergraduate Program in Earth Systems

The Earth Systems Program is an interdisciplinary environmental science major. Students learn about and independently investigate complex environmental problems caused by human activities in conjunction with natural changes in the Earth system. Earth Systems majors become skilled in those areas of science, economics, and policy needed to tackle the world’s most pressing social-environmental problems, becoming part of a generation of scientists, professionals, and citizens who approach and solve problems in a systematic, interdisciplinary way.

For students to be effective contributors to solutions for such problems, their training and understanding must be both broad and deep. To this end, Earth Systems students take fundamental courses in ecology, calculus, chemistry, geology, and physics, as well as economics, policy, and statistics. After completing breadth training, they concentrate on advanced work in one of six focus areas: biology, energy, environmental economics and policy, land systems, sustainable food and agriculture, or oceanography and climate. Tracks are designed to support focus and rigor but include flexibility for specialization. Examples of specialized foci have included but are not limited to environment and human health, sustainable agriculture, energy economics, sustainable development, or oceanography and climate. Tracks are designed to support focus and rigor but include flexibility for specialization. Examples of specialized foci have included but are not limited to environment and human health, sustainable agriculture, energy economics, sustainable development, business and the environment, and marine policy. Along with formal course requirements, Earth Systems students complete a 1-unit (270-hour) internship. The internship provides a hands-on academic experience working on a supervised field, laboratory, government, or private sector project.

The Earth Systems Program provides an advising network that includes faculty, staff, and student peer advisers.

The following is an outline of the sequential topics covered and skills developed in this major.

1. **Fundamentals:** The Earth Systems Program includes courses that describe the natural functioning of the physical and biological components of the Earth and human activities that interact with these components. Training in fundamentals includes introductory course work in geology, biology, chemistry, physics, and economics. Additional training in course work in single and multivariable calculus, linear algebra, and statistics provides students with skills needed for quantifying environmental problems. Training in statistics is specific to the area of focus: geostatistics, biostatistics, econometrics.

2. **System Interactions:** Focus in these courses is on the fundamental interactions among the physical, biological, and human components of the Earth system. Understanding the dynamics between natural variation in and human-imposed influences on the Earth system informs the development of effective solutions to social-environmental challenges.
   a. Earth Systems courses that introduce students to the dynamic and multiple interactions that characterize social-environmental challenges include:

A comprehensive list of environmental courses (p. 151) is available on the “Related Courses” tab. This list as well as advice on courses that focus on problem solving are available in the program office.

Learning Outcomes (Undergraduate)

The program expects majors to be able to demonstrate the following learning outcomes. These learning outcomes serve as benchmarks for evaluating students and the program’s undergraduate degree. Students are expected to:

1. demonstrate knowledge of foundational skills and concepts in order to advance the interdisciplinary study of the environment.
2. demonstrate the ability to analyze, integrate and apply relevant science and policy perspectives to social-environmental problems.
3. demonstrate the ability to communicate complex concepts and data relevant to social-environmental problems and questions to expert and non-expert audiences.

Learning Outcomes (Graduate)
The coterminal master’s degree in Earth Systems provides the student with enhanced analytical tools to evaluate the disciplines most closely associated with the student’s focus area. Specialization is gained through course work and independent research work supervised by the master’s faculty adviser.

Bachelor of Science in Earth Systems
The B.S. in Earth Systems (EARTHSYS) requires the completion of courses divided into three categories:

1. core
2. foundation and breadth
3. track-specific requirements.

The student must fulfill the internship requirement, participate in the Senior Capstone and Reflection course (EARTHSYS 210A or EARTHSYS 210B), complete the Earth Systems Capstone Project (EARTHSYS 210P), and complete the Writing in the Major (WIM) requirement.

Core courses, track courses, and electives must be taken for a letter grade. The WIM course may not also count towards the track or electives, if counted as a WIM.

More extensive work in mathematics and physics may be valuable for those planning graduate study. Graduate study in ecology and evolutionary biology and in economics requires familiarity with differential equations, linear algebra, and stochastic processes. Graduate study in geology, oceanography, and geophysics may require more physics and chemistry. Students should consult their adviser for recommendations beyond the requirements specified above.

1 The Geological Sciences requirement can be fulfilled by completing GS 1, GS 4, or EARTHSYS 117. GS 1A, 1B, and 1C are no longer offered. If taken in previous years, these will still fulfill the Earth Systems’ Geological Sciences requirement.

Elective Requirement 6-10
Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

Biosphere

Additional foundation and breadth courses

Units

Instead of Biology Foundation requirement listed in Required Foundation/Breadth section above, two of the following Bio courses are required:

BIO 81  Introduction to Ecology
BIO 82  Genetics

Or either BIO 81 or BIO 82 AND:

BIOHOPK 43  Plant Biology, Evolution, and Ecology

Additional Chemistry requirement (in addition to 31A/B or X):

CHEM 33  Structure and Reactivity of Organic Molecules

Physics (select one of the following):

PHYSICS 41  Mechanics
PHYSICS 45  Light and Heat
GEOPHYS 111  Introduction to the foundations of contemporary geophysics

Choose two courses from Ecology and Conservation Biology, and one course from each of the remaining sub-categories below, total six required:

Biogeochemistry 3-4

CEE 177  Aquatic Chemistry and Biology
CEE 274A  Environmental Microbiology I
EARTSYS 132  Evolution of Earth Systems
EARTSYS 143  Molecular Geomicrobiology Laboratory
EARTSYS 151  Biological Oceanography
EARTSYS 152  Marine Chemistry
EARTSYS 155  Science of Soils
EARTSYS 158  Geomicrobiology
GS 130  Soil Physics and Hydrology (Not offered in 2017-18.)

Ecology and Conservation Biology 3-12

BIO 115  The Hidden Kingdom: Evolution, Ecology and Diversity of Fungi
BIO 144  Conservation Biology: A Latin American Perspective
BIOHOPK 172  Marine Ecology: From Organisms to Ecosystems
BIOHOPK 173  Marine Conservation Biology
BIOHOPK 177  Dynamics and Management of Marine Populations
BIOHOPK 185  Ecology and Conservation of Kelp Forest Communities
EARTSYS 116  Ecology of the Hawaiian Islands

Ecosystems and Society 3-5

ANTHRO 118  Heritage, Environment, and Sovereignty in Hawaii
ANTHRO 147  Nature, Culture, Heritage
ANTHRO 162  Indigenous Peoples and Environmental Problems
ANTHRO 166  Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
ANTHRO 177  Environmental Change and Emerging Infectious Diseases
ANTHRO 178  Evolution and Conservation in Galapagos
BIOHOPK 168  Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations
Energy, Science and Technology

Instead of Biology Foundation requirement listed in Required Foundation/Breadth section above, select one of the following Bio courses:

8

BIO 81 Introduction to Ecology
BIO 83 Biochemistry & Molecular Biology
BIOHOPK 43 Plant Biology, Evolution, and Ecology
HUMBIO 2A Genetics, Evolution, and Ecology
& HUMBIO 2B Evolution, and Society
EARTHSYS 116 Ecology of the Hawaiian Islands

Additonal Foundation and Breadth Courses

3

PHYSICS 43 Electricity and Magnetism
PHYSICS 45 Light and Heat
CME 100 Vector Calculus for Engineers (preferred over MATH 51 for this track)

Computer science requirement: One-unit of Computer Science is required (unless CME 100 was completed); see Earth Systems staff for approved CS courses.

Energy Fundamentals

3

ENGR 30 (ENGR 30 can count towards this track requirement.)

Select one of the following:

3-4

CEE 272R Modern Power Systems Engineering
ENERGY 120 Fundamentals of Petroleum Engineering
MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

Select one of the following:

3-5

EARTHSYS 101 Energy and the Environment
EARTHSYS 102 Fundamentals of Renewable Power
EARTHSYS 103 Understanding Energy

Choose at least one course in each of the three sub-categories, total five required. Note that many of these have prerequisite work:

Energy Resources & Technology

3-5

CEE 156 Building Systems
CEE 176A Energy Efficient Buildings
EARTHSYS 101 Energy and the Environment
EARTHSYS 103 Understanding Energy
ENERGY 120 Fundamentals of Petroleum Engineering
ENERGY 269 Geothermal Reservoir Engineering
ENERGY 293B Fundamentals of Energy Processes
ENERGY 293C Energy from Wind and Water Currents
MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
ME 250 Internal Combustion Engines
ME 260 Fuel Cell Science and Technology

Sustainable Energy & Development

3-4

cEE 126A (CEE 126A is an option for this track requirement. Enroll in 3 units. Not offered 2017-18.)
CEE 176B Electric Power: Renewables and Efficiency
CEE 221A Planning Tools and Methods in the Power Sector
CEE 226 Life Cycle Assessment for Complex Systems
CEE 272S (Not offered in 2017-18.)
EARTHSYS 102 Fundamentals of Renewable Power
EARTHSYS 146 Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
ENERGY 153 Carbon Capture and Sequestration
MATSCI 156 Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution

Urban 165 Sustainable Urban and Regional Transportation Planning

Energy Policy, Economics & Entrepreneurship

2-4

ENERGY 104 Sustainable Energy for 9 Billion
ENERGY 110 Engineering Economics
ENERGY 171 Energy Infrastructure, Technology and Economics
ENERGY 191 Optimization of Energy Systems
GSB 336 Energy Markets and Policy
MS&E 243 Energy and Environmental Policy Analysis
LAW 2503 Law
MS&E 294 Systems Modeling for Climate Policy Analysis
MS&E 295 Energy Policy Analysis

Elective Requirement

3-5

One additional course at the 100-level or above is required. This course must be a minimum of 3 units. 3 units of approved energy seminars may count as one elective. See Earth Systems staff for the approved seminar list.

Land Systems

4

Additional foundation and breadth courses

PHYSICS 41 Mechanics
or PHYSICS 45 Light and Heat
or GEOPHYS 11 Introduction to the foundations of contemporary geophysics

Choose at least one course in each of the four sub-categories below, total seven required:

Land Ecosystems

3-4

BIO 144 Conservation Biology: A Latin American Perspective
EARTHSYS 128 Evolution of Terrestrial Ecosystems
EARTHSYS 155 Science of Soils
EARTHSYS 180 Principles and Practices of Sustainable Agriculture
ESS 256 Soil and Water Chemistry
OSPSANTG 58 Living Chile: A Land of Extremes

Water

3-4

CEE 101B Mechanics of Fluids
CEE 166A Watersheds and Wetlands
CEE 166B Floods and Droughts, Dams and Aqueducts
CEE 177 Aquatic Chemistry and Biology
EARTHSYS 104 The Water Course
GEOPHYS 190 Near-Surface Geophysics
GS 130  Soil Physics and Hydrology (Not offered 2017-18.)

Land Use  3-5

ANTHRO 166  Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness
CEE 124  Sustainable Development Studio
CEE 176A  Energy Efficient Buildings
EARTHSYS 106  World Food Economy
EARTHSYS 181  Urban Agriculture in the Developing World (Not offered 2017-18.)
EARTHSYS 185  Feeding Nine Billion
ESS 270  Analyzing land use in a globalized world
URBANST 110  Introduction to Urban Studies
URBANST 113  Introduction to Urban Design: Contemporary Urban Design in Theory and Practice
URBANST 163  Land Use Control
URBANST 171  Urban Design Studio

Methods  3-5

EARTHSYS 142  Remote Sensing of Land
EARTHSYS 144  Fundamentals of Geographic Information Science (GIS)
EARTHSYS 211  Fundamentals of Modeling (Not offered in 2017-18.)
HISTORY 401A  (HISTORY 401A can count towards this track requirement. Not offered 17.18.)

Elective Requirement  6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

Sustainable Food and Agriculture

Instead of Biology Foundation requirement listed in Required Foundation/Breadth section above, the following Bio courses are required:

BIO 81  Introduction to Ecology 4
&BIO 82  and Genetics
or BIO 83  Biochemistry & Molecular Biology
OR HUMBIO 2A & HUMBIO 2B
OR EARTHSYS 116
OR BIOHOPK 43

Additional foundation and breadth courses

PHYSICS 41  Mechanics
or PHYSICS 45  Light and Heat
or GEOPHYS 111  Introduction to the foundations of contemporary geophysics

A total of seven courses are required from the Food and Agriculture focus areas:

Fundamentals of Agriculture Production and Economics 9-10
Both required:
EARTHSYS 106  World Food Economy
EARTHSYS 185  Feeding Nine Billion

Biogeophysical Dimensions  9-12

Required:
EARTHSYS 155  Science of Soils
And select two of the following:
BIO 137  Plant Genetics
GS 130  Soil Physics and Hydrology (Not offered 2017-18.)
HUMBIO 113  The Human-Plant Connection
HUMBIO 130  Human Nutrition

Social Dimensions  3-5

Select one of the following:
BIO 144  Conservation Biology: A Latin American Perspective
EARTHSYS 105  Food and Community: Food Security, Resilience and Equity
EARTHSYS 181  Urban Agriculture in the Developing World (Not offered in 2017-18.)
EARTHSYS 187  FEED the Change: Redesigning Food Systems
ECON 118  Development Economics
HISTORY 203G  (HISTORY 203G can count towards this track requirement. Not offered 17.18.)
HUMBIO 113S  Healthy/Sustainable Food Systems: Maximum Sustainability across Health, Economics, and Environment
HUMBIO 166  Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context

Applied Study in the Field  3-4

Required:
EARTHSYS 180  Principles and Practices of Sustainable Agriculture

Elective Requirement  6-10

Two additional courses at the 100-level or above are required. Each must be a minimum of 3 units.

Oceans and Climate (formerly Oceans)

Units

Additional Foundation and Breadth Courses 0-5

MATH 51 & MATH 52  Linear Algebra and Differential Calculus of Several Variables and Integral Calculus of Several Variables (CME 100 preferred over MATH 51 and MATH 52)
or CME 100  Vector Calculus for Engineers

Physics (select one of the following): 3-4

PHYSICS 41  Mechanics
PHYSICS 45  Light and Heat
or GEOPHYS 111  Introduction to the foundations of contemporary geophysics

Physics of the Atmosphere and Climate 3

Select one of the following:
CEE 63  Weather and Storms (Students are discouraged from taking CEE 63 in 2017.18. EARTHSYS 164 is not offered in 2017.18, so EARTHSYS 146A and EARTHSYS 146B should be taken to fulfill these track requirements instead.)
EARTHSYS 146A  Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation (preferred)

Physics of the Ocean 3-4

Select one of the following:
EARTHSYS 164  Introduction to Physical Oceanography (Not given in 2017.18. Students must take EARTHSYS 146A and EARTHSYS 146B instead.)
EARTHSYS 146B  Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation

Spatial Analysis  3-4

EARTHSYS 141  Remote Sensing of the Oceans

Biological Oceanography  3-4

Select one of the following:
EARTHSYS 151  Biological Oceanography (preferred; take at the same time as EARTHSYS 152)
BIOHOPK 163HOceanic Biology
The Earth Systems honors program provides students with an opportunity to pursue interdisciplinary research. It consists of a year-long research project that is mentored by one or more Earth Systems-affiliated faculty members, and culminates in a written thesis. All theses are evaluated for acceptance by the thesis faculty adviser, one additional faculty member (who is the second reader), and the Director of Earth Systems. Both the adviser and second reader must be members of the Academic Council. Acceptance into the Honors program is not a guarantee of graduating with the honors designation.

Honors students are required to present their research publicly, preferably through the School of Earth, Energy, and Environmental Sciences’ Annual Thesis Symposium, which highlights undergraduate and graduate research in the school. Faculty advisers are encouraged to sponsor presentation of student research results at professional society meetings.

### Minor in Earth Systems, Sustainability Subplan

The minor in Earth Systems, Sustainability subplan, provides an introduction to fundamental science, interdisciplinary systems thinking, and environmental justice considerations, as well as a foundation in practical skills and applied problem solving experience needed to understand social-environmental systems and address intergenerational sustainability challenges. Students declaring the minor in Earth Systems must also declare the Sustainability subplan.

Students pursuing the minor must take the courses listed below and approved electives for a minimum of 35 units. Courses that count towards the fulfillment of major requirements may not be counted towards the minor, and all courses must be taken for a letter grade.

### Units

Students declaring a minor in Earth Systems must do so no later than two quarters prior to their intended quarter of degree conferral, for example, a student must declare a minor before the end of Autumn Quarter to graduate the following Spring Quarter. The Sustainability subplan must also be declared in Axess when declaring the minor. In addition, students pursuing the minor must complete the Multiple Major/Minor Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) and have it reviewed by all applicable departments/programs. This form must be submitted to the Student Services Center (https://studentservicescenter.stanford.edu) by the application to graduate deadline for the term in which the student intends to graduate.

### Electives

Students must take a minimum of 19 units of electives at the 100-level or above that address dimensions of environmental systems and social-environmental systems in theory or practice, with at least one course taken in each category.

Of the electives selected from the categories above,
Coterminal Master’s Degrees in Earth Systems

The Earth Systems Program offers current Stanford University undergraduates the opportunity to apply to a one-year coterminal master’s program. Earth Systems offers a coterminal Master of Science (M.S.) degree in Earth Systems and a coterminal Master of Arts (M.A.) degree in Earth Systems, Environmental Communication. The Environmental Communication subplan prints on both the transcript and the diploma.

Application and Admission

The Earth Systems Program has quarterly coterminal degree application deadlines: November 7, 2017; February 20, 2018; and May 15, 2018. Seniors must apply by Winter Quarter deadline. To apply, students should submit an online application. The application includes the following:

- The Stanford coterminal application (https://www.applyweb.com/standterm)
- A statement of purpose
- A resume
- A current Stanford unofficial transcript
- Two letters of recommendation, one of which must be from the master’s adviser (who must be an Academic Council member; each coterminal M.A. student has two advisers: Thomas Hayden and Kevin Arrigo, or another approved faculty adviser)
- Master’s Program Proposal (https://earth.stanford.edu/esys/program-forms): A list of courses that fulfill degree requirements signed by the master’s adviser

1. Applications must be submitted no later than the quarter prior to the expected completion of the B.S. degree (and within quarterly application deadlines). An application fee is assessed by the Registrar’s Office for coterminal applications, once students are matriculated into the program.

2. Students applying to the coterminal master’s program must have completed a minimum of 120 units toward graduation with a minimum overall Stanford GPA of 3.4.

3. All applicants must devise a program of study that shows a level of specialization appropriate to the master’s level, as determined in consultation with the master’s adviser and the Director of Earth Systems. (See also following sections, Master of Science and Master of Arts in Earth Systems Degree Requirements).

4. Students applying from an undergraduate major other than Earth Systems should review their undergraduate course list with Deana Fabbro-Johnston, Richard Nevele, or Thomas Hayden (M.A. only).

5. The student has the option of receiving the B.S. degree after completing that degree’s requirements or receiving the B.S. and M.A./M.S. degrees concurrently at the completion of the master’s program.

6. Students must submit a new application to change from the M.S. to the M.A. in Earth Systems, or from the M.A. to the M.S. in Earth Systems. If accepted, the student must submit a Graduate Authorization Petition through Axess; a $125 fee applies to a successful Graduate Authorization Petition.

University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Coterminal Master of Science in Earth Systems

Degree Requirements

The master of science degree in Earth Systems allows specialization through graduate-level course work that may include up to 9 units of research with the master’s adviser. This may culminate in the preparation of a M.S. thesis; however, a thesis is not required for the degree. The process of building mastery in the field is enriched through steady communication with a faculty adviser.

The following are required of all M.S. students:

- A minimum of 45 units of course work and/or research credit (upon approval).
- At least 34 units of the student’s course work for the master’s program must be at the 200-level or above.
- All remaining course work must be at the 100-level or above.
- All courses for the master’s program must be taken for a letter grade; courses not taken for a letter grade must be approved by the master’s adviser and Director of Earth Systems.
- A minimum overall GPA of 3.4 must be maintained.
- All coterminal master’s students are required to take the capstone course, EARTHSYS 290 Master’s Seminar.

For the Master of Science degree in Earth Systems, the following courses must be taken if not completed in the undergraduate degree program. These courses do not have to be completed before applying to the coterm program. These may not be counted as part of the 45-unit master’s degree:

Core (both required):

Biology: One Biology Foundations/Core course pre-approved by Master’s adviser, OR select from the following:  
- BIOHOPK 43 Plant Biology, Evolution, and Ecology  
- HUMBIO 2A Genetics, Evolution, and Ecology  
- & HUMBIO 2B Culture, Evolution, and Society  
- EARTHSYS 116 Ecology of the Hawaiian Islands

Chemistry (select one of the following):  
- CHEM 31X Chemical Principles Accelerated  
- CHEM 31A Chemical Principles I  
- & CHEM 31B Chemical Principles II

Physics (select one of the following):  
- One physics class from the PHYSICS 20 or 40 series or GEOPHYS 110

Mathematics (select one of the following):  
- MATH 51 Linear Algebra and Differential Calculus of Several Variables  
- CME 100 Vector Calculus for Engineers

Statistics (select one of the following):  
- BIOHOPK 174H Experimental Design and Probability  
- BIO 141 Biostatistics  
- ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists  
- STATS 110 Statistical Methods in Engineering and the Physical Sciences  
- STATS 116 Theory of Probability

Coterminal Master of Arts in Earth Systems, Environmental Communication

Degree Requirements

The Master of Arts in Earth Systems, Environmental Communication, provides an overview of the theory, techniques, and challenges of communicating environmental concepts to non-specialist audiences and includes hands-on experience with different modalities of communication, principally writing, multimedia production, and education. The degree program is built on a three-quarter progression of required core courses, including a required practicum experience, along with electives. Students complete 22 units of required core courses along with 22 units of focus courses to be chosen in close consultation with Thomas Hayden and a faculty co-adviser.

For the master of arts degree, prerequisites may vary based on the interests and academic background of each student, to be determined in consultation with primary adviser Thomas Hayden, the faculty co-adviser, and the Director of Earth Systems. At a minimum, entering students must have completed EARTHSYS 10 Introduction to Earth Systems (may be audited), EARTHSYS 111 Biology and Global Change, and EARTHSYS 112 Human Society and Environmental Change. These courses do not have to be completed before applying to the coterm program. Additional course work in the sciences, mathematics, and other fields may also be required on a case-by-case basis; such required foundational course work may not count toward the 45 units of master’s-level course requirements.

The following are required of all M.A. students:

- All M.A. students must declare the Environmental Communication subplan in Axess.  
- A minimum of 45 units of course work and/or research credit (upon approval).  
- At least 34 units of the student’s course work for the master’s program must be at the 200-level or above.  
- All remaining course work must be at the 100-level or above.

- All courses for the master’s program must be taken for a letter grade; courses not taken for a letter grade must be approved by the master’s adviser and Director of Earth Systems.  
- A minimum overall GPA of 3.4 must be maintained.  
- All coterminal master’s students are required to take the capstone course, EARTHSYS 290 Master’s Seminar.

Director: Kevin Arrigo
Deputy Director: Richard Nevele
Associate Director: Deana Fabbro-Johnston

Michael Osborne (Earth Systems), Stephen Palumbi (Biology, Hopkins Marine Station, Woods Institute for the Environment), Jonathan Payne (Geological Sciences), Kabir Peay (Biology), Emily Polk (Program in Writing and Rhetoric), Thomas Robinson (Medicine), Matt Rothe (Earth Systems, Hasso Plattner Institute of Design, Graduate School of Business), Jennifer Saltzman (Geological Sciences), Dustin Schroeder (Geophysics), Paul Segall (Geophysics), Deborah Sivas (Law), George Somero (Biology, Hopkins Marine Station), Jenny Suckale (Geophysics), James Sweeney (Management Science and Engineering, Woods Institute for the Environment), Leif Thomas (Earth System Science), Barton Thompson, Junior (Law, Woods Institute for the Environment), Sarah Truebe (Earth Systems), Tiziana Vanorio (Geophysics), Peter Vitousek (Biology, Emmett Interdisciplinary Program in Environment and Resources, Woods Institute for the Environment), Virginia Walbot (Biology), Paula Welander (Earth System Science), Cindy Wilber (Jasper Ridge), Michael Wilcox (Anthropology), Mikael Wolfe (History), Jane Woodward (Atmosphere and Energy Operations), Mark Zoback (Geophysics)

Overseas Studies Courses in Earth Systems

The Bing Overseas Studies Program (http://bosp.stanford.edu) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

EMMETT INTERDISCIPLINARY PROGRAM IN ENVIRONMENT AND RESOURCES (E-IPER)

Courses offered by the Emmett Interdisciplinary Program in Environment and Resources are listed under the subject code ENVRES on the Stanford Bulletin's ExploreCourses web site (http://explorecourses.stanford.edu/search?sessionid=75B13D9BD401BF4435773811DC678716?view=catalog&catalog=&page=0&q=ENVRES&filter-catalognumber-ENVRES=on&filter-coursestatus-Active=on).

Mission of the Program

The Emmett Interdisciplinary Program in Environment and Resources develops the knowledge, skills, perspectives, and ways of thinking needed to understand and help solve the world's most significant environmental and resources sustainability challenges. E-IPER strives to be a model for interdisciplinary graduate education. E-IPER offers a Ph.D. in Environment and Resources, a Joint M.S. exclusively for students in Stanford's Graduate School of Business or Stanford Law School, and a Dual M.S. for students in the School of Medicine or a Ph.D. program in another department. E-IPER's home is the School of Earth, Energy & Environmental Sciences; affiliated faculty come from all seven Stanford schools.

Graduate Programs in Environment and Resources

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 50)" section of this bulletin. The E-IPER Ph.D. and M.S. degrees are guided by comprehensive requirements created with faculty and student input and approved by E-IPER's Executive Committee. To access the current Ph.D. and M.S. degree requirement documents, see the E-IPER web site (https://earth.stanford.edu/eiper).

Learning Outcomes (Graduate)

Completion of the Ph.D. and M.S. degrees in Environment and Resources provides students with the knowledge, skills, perspectives, and ways of thinking needed to understand and help solve the world's most significant environmental and resources sustainability challenges.

Master of Science in Environment and Resources

For information on the University's basic requirements for the master's degree, see the "Graduate Degrees (p. 50)" section of this bulletin.

The Master of Science degree, offered as a joint master's degree or a dual master's degree, is an option only for: M.B.A. students in the Graduate School of Business; J.D. students in the Stanford Law School; M.D. students in the School of Medicine; students pursuing a Ph.D. in another Stanford department; and for E-IPER Ph.D. students who do not continue in the Ph.D. degree program.

Joint Master's Degree

Students enrolled in a professional degree program in Stanford's Graduate School of Business or the Stanford Law School are eligible to apply for admission to the Joint M.S. in Environment and Resources Degree program. Enrollment in the joint M.S. program allows students to pursue an M.S. degree concurrently with their professional degree and to count a defined number of units toward both degrees, resulting in the award of Joint M.B.A. and M.S. in Environment and Resources degree or a Joint J.D. and M.S. in Environment and Resources degree.

The joint M.S.-M.B.A degree program requires a total of 129 units: 84 units for the M.B.A. and 45 units for the M.S. (compared to 100 units for the M.B.A. plus 45 units for the M.S. as separate degrees) to be completed over approximately eight academic quarters.

The joint M.S.-J.D. degree program requires a minimum of 113 units; additional units may be necessary to satisfy all requirements. The J.D. degree requires 111 units (minimum of 80 Law units and 31 non-Law units) and the M.S. degree requires 45 units. The joint degree allows up to 43 overlapping units: 31 non-Law units allowed within the J.D. degree plus 12 professional school units allowed within the M.S. degree. The joint M.S.-J.D. may be completed in three years.

Each student's program of study focuses on a specific track (see "Joint M.S. and Dual M.S. Course Tracks" below), and is subject to the approval of the student's faculty adviser and E-IPER staff. The joint degree is conferred when the requirements for both the E-IPER M.S. and the professional degree program have been met.

In addition to requirements for the professional degree, all joint M.S. students are required to complete 45 units within the parameters outlined below and must achieve a 'B' (3.0) grade point average in all letter-graded courses taken toward the M.S. degree. Professional school letter-graded courses are not included in the E-IPER GPA calculation. The student must complete at least 23 units at the 200-level or above. Courses numbered 1 to 99 are not allowable. For application information, see the Admissions page on the E-IPER website.

1. Required Courses: An introductory core course and a capstone project seminar:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENVRES 280</td>
<td>Topics in Environment and Resources</td>
<td>2</td>
</tr>
<tr>
<td>ENVRES 290</td>
<td>Capstone Project Seminar in Environment and Resources</td>
<td>1-3</td>
</tr>
</tbody>
</table>

* The capstone project integrates the student's professional and M.S. degrees and must be taken for a minimum of 3 units, or a maximum of 4 units, over one or two quarters.

2. Track Courses: A minimum of four letter-graded courses from one M.S. course track. Track courses must be taken for a minimum of 3 units. Specific track courses are listed below in the "Joint M.S. and Dual M.S. Course Tracks" section.
   a. Cleantech
   b. Climate and Atmosphere
   c. Energy
   d. Freshwater
   e. Global, Community, and Environmental Health
   f. Land Use and Agriculture
   g. Oceans and Estuaries
   h. Sustainable Built Environment
   i. Sustainable Design

3. Elective Courses: At least four 3-5 unit letter-graded elective courses at the 100-level or higher. Elective courses may be taken from the student's selected course track, another course track, or elsewhere in the University, provided that they are relevant to the student's environment and resources course of study.

There are additional restrictions on course work used to fulfill the joint M.S. degree requirements:
• A maximum of 5 units from courses that are identified as primarily consisting of guest lectures, such as the Energy Seminar, may be counted toward the Joint M.S. degree.

• A maximum of 5 units of individual study courses, directed reading and/or independent research units (such as ENVRES 398 Directed Reading in Environment and Resources or ENVRES 399 Directed Research in Environment and Resources) may be counted toward the joint M.S. degree. One individual study course, if taken for 3-5 letter-graded units, may be counted as one of the four elective courses.

• A maximum of 12 units from approved courses related to environmental and resource fields, from any professional school, may be counted toward the joint M.S. degree. One approved professional school course may be counted as one of the four electives.

**Dual Master’s Degree**

Students in the School of Medicine or students pursuing a Ph.D. in another Stanford department may apply to pursue the M.S. in Environment and Resources dual degree. For the dual degree, students must meet the University’s minimum requirements for their M.D. or Ph.D. degree and also complete an additional 45 units for the M.S. in Environment and Resources. Completion of the M.S. typically requires at least three quarters of study in addition to the time required for the student’s other degree. For additional information, see the E-IPER web site.

Each student’s program of study focuses on a specific track (see “Joint M.S. and Dual M.S. Course Tracks” below), and is subject to the approval of the student’s faculty adviser and E-IPER staff. The two degrees are conferred when the requirements for both the E-IPER M.S. and the other degree program have been met. For application information, see the Admissions (https://earth.stanford.edu/eiper/joint-ms-admissions) page on the E-IPER website (https://earth.stanford.edu/eiper).

In addition to requirements for the M.D. or Ph.D. degree, students are required to complete 45 units within the parameters outlined below and must achieve a 'B' (3.0) grade point average in all letter-graded courses taken toward the M.S. degree. The student must complete at least 23 units at the 200-level or above. Courses numbered 1 to 99 are not allowable.

1. **Required Courses:** completion of a required introductory core course and a capstone project seminar:

   ENVRES 280 Topics in Environment and Resources 2

   ENVRES 290 Capstone Project Seminar in Environment and Resources (see ‘2’ below) 1-3

2. The Capstone Project integrates the student’s professional/Ph.D. and M.S. degrees and must be taken for a minimum of 3 units in one quarter, or a maximum of 4 units, over one or two quarters.

3. **Track Courses:** completion of a minimum of four letter-graded courses from one M.S. Course Track. Track courses must be taken for a minimum of 3 units. Specific track courses are listed below under Joint M.S. and Dual M.S. Course Tracks.

   • Cleantech
   • Climate and Atmosphere
   • Energy
   • Freshwater
   • Global, Community, and Environmental Health
   • Land Use and Agriculture
   • Oceans and Estuaries
   • Sustainable Built Environment
   • Sustainable Design

4. **Elective Courses:** completion of at least four additional 3-5 unit letter-graded elective courses at the 100-level or higher. Elective courses may be taken from the student’s selected course track, another course track, or elsewhere in the University, provided that they are relevant to the student’s environment and resources course of study.

There are additional restrictions on course work used to fulfill the dual M.S. degree requirements:

• A maximum of 5 units from courses that are identified as primarily consisting of guest lectures, such as the Energy Seminar may be counted toward the dual M.S. degree.

• A maximum of 5 units of individual study courses, directed reading, and independent research (such as ENVRES 398 Directed Reading in Environment and Resources or ENVRES 399 Directed Research in Environment and Resources) may be counted toward the Dual M.S. degree. One individual study course, if taken for 3-5 letter-graded units, may be counted as one of the four elective courses.

• A maximum of 12 units from approved courses related to the environmental and resource fields, from any professional school, may be counted toward the dual M.S. degree. One approved professional school course may be counted as one of the four electives.

**Joint M.S. and Dual M.S. Course Tracks**

Students should consult the Stanford Bulletin’s ExploreCourses (http://explorecourses.stanford.edu) web site to view the course description, class schedule, location, eligibility, and prerequisites for all courses. Course track information and other recommended courses are also available on the E-IPER web site.

Doctor of Philosophy in Environment and Resources

For information on the University’s basic requirements for the Ph.D. degree, see the “Graduate Degrees (p. 50)” section of this bulletin.

E-IPER updates the Ph.D. requirements annually, laying out the structure of advising meetings, core courses, program activities, and milestones that guide students’ progress. Each student works with a faculty advising team from different research areas to design a course of study that allows the student to develop and exhibit:

1. understanding of analytical tools and research approaches for interdisciplinary problem solving, and a mastery of those tools and approaches central to the student’s thesis work
2. depth of knowledge in at least two distinct fields of inquiry; and
3. interdisciplinary breadth as determined by faculty advisers and student.

Program-specific Ph.D. requirements, including a timeline to achieve milestones, are outlined in detail in the current year requirements and are summarized below:

1. In the first year, completion of the Ph.D. core course sequence.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENRVS 300 Introduction to Resource, Energy and Environmental Economics</td>
<td>3</td>
</tr>
<tr>
<td>ENRVS 315 Environmental Research Design Seminar</td>
<td>1</td>
</tr>
<tr>
<td>ENRVS 320 Designing Environmental Research</td>
<td>3-4</td>
</tr>
<tr>
<td>ENRVS 330 Research Approaches for Environmental Problem Solving</td>
<td>4-13</td>
</tr>
<tr>
<td>&amp; ENRVS 398 Directed Reading in Environment and Resources</td>
<td></td>
</tr>
</tbody>
</table>

1 Students who took EARTH 300 in previous years may also count this toward the requirement.

2. Fields of Inquiry: Fulfillment of depth in the student’s two chosen fields of inquiry through courses, research, and/or independent studies as determined by the student and his/her faculty advisers and committee members. Fields of inquiry are the central focus of a student’s dissertation research. Students have the freedom to define and choose the fields of inquiry in which they develop depth of understanding through the course of their Ph.D. program and which are distinct enough to ensure that the student’s research is interdisciplinary. Each field of inquiry must correspond to a specific faculty adviser. As part of the qualifying exam, each student is required to submit a detailed essay describing:

- the two fields of inquiry, explaining the development of these fields, and their relationship to the larger disciplines from which they are drawn;
- how rigor is understood and achieved in these fields;
- the importance and applicability of these fields to the student’s research questions; and
- how the student’s work will combine these two fields of inquiry to produce an interdisciplinary research project that demonstrates scholarly rigor.

3. Demonstration of interdisciplinary breadth of knowledge that is more broadly related to environment and resources in the form of courses, independent study, and/or evidence of proficiency through prior course work or experience. Fulfillment of the interdisciplinary breadth
requirement must be certified by the student’s lead faculty advisers and committee members.

4. Completion of quarterly meetings with advisers during the first year, and at minimum, annual meetings thereafter.

5. Submission of a candidacy plan for review at the second-year committee meeting of the minds and subject to the approval of the student’s committee and E-IPER’s faculty director. The candidacy plan should document how the student has fulfilled the program requirements to date and include a summary of research ideas and a list of faculty who might serve as qualifying exam committee members.

6. Completion of the oral qualifying exam and completion of the requirements for candidacy, including at least 25 letter-graded graduate course units (200 level and above) with at least a ‘B’ (3.0) average. The qualifying exam committee must include the student’s two lead advisers and two to three other faculty members with expertise in the student’s research area. The majority of the qualifying exam committee should be members of the Academic Council; the chair of the committee must be an Academic Council member and may not be one of the student’s two lead advisers. In exceptional cases, the committee may include a member-at-large who is not a Stanford faculty member as a fourth or fifth member.

7. Completion of a written dissertation, approved by the student’s dissertation reading committee consisting of the student’s lead advisers and at least one other member, and passage of the University oral examination in defense of the dissertation following the guidelines outlined in the “Graduate Degrees (p. 50)” section of this bulletin. The University oral examination committee comprises the student’s two lead advisers, at least two additional members, and a chair whose academic appointment is in a department outside that of the lead advisers. Normally, all committee members are Academic Council members; appointment of a non-Academic Council member must be petitioned and approved by the faculty director.

In addition to the requirements listed above, all Ph.D. students must:

1. Serve as a teaching assistant (TA) for at least one quarter in a course with a discussion section or with an opportunity to lecture in at least two class sessions, in any department or program, including but not limited to ENVRES 320 Designing Environmental Research or ENVRES 330 Research Approaches for Environmental Problem Solving. Seminars, including Introductory Seminars, may not be used to fulfill this requirement. Students should fulfill the teaching requirement by the end of the third year unless they obtain a firm commitment from a faculty member to TA a future course.

2. On an ongoing basis, submit grant proposals for external funding, defined as fellowship and/or research funds provided by a government agency, a private foundation, or a University entity other than E-IPER or the School of Earth, Energy and Environmental Sciences.

3. Participate each year in a Spring Quarter Annual Review in which the student and lead advisers submit progress reports for review by the E-IPER Academic Guidance Committee.

ENERGY RESOURCES ENGINEERING

Courses offered by the Department of Energy Resources Engineering are listed under the subject code ENERGY on the Stanford Bulletin's ExploreCourses web site.

The Department of Energy Resources Engineering (ERE) awards the following degrees: the Bachelor of Science, Master of Science, Engineer, and Doctor of Philosophy in Energy Resources Engineering. The department also awards the Master of Science, Engineer, and Doctor of Philosophy in Petroleum Engineering. Consult the ERE student services office to determine the relevant program.

Energy Resources Engineering contributes to the engineering science needed to maintain and diversify energy supply while finding the least impactful and most rapid pathways toward greater energy sustainability. Energy Resources Engineering is concerned with the production, transformation, and impacts of energy resources including renewables and fossil fuels. Crude oil and natural gas are especially important components of the current energy system due to their widespread use, economic importance, and contributions to climate change. As such, the flow of water, oil, and gas in the subsurface are important to quantify accurately for energy recovery, energy storage, and environmental assessment.

The program also has a strong interest in related energy topics such as renewable energy, global climate change, carbon capture and sequestration, and energy systems. The Energy Resources Engineering curriculum provides a sound background in basic sciences and their application to practical problems to address the complex and changing nature of the field. Course work includes the fundamentals of chemistry, computer science, engineering, geology, geophysics, mathematics, and physics. Applied courses cover most aspects of energy resources engineering and some related fields such as geostatistics. The curriculum emphasizes the fundamental aspects of fluid flow in the subsurface. These principles apply to optimizing energy recovery from petroleum reservoirs, geothermal energy systems, energy storage, and remediating contaminated groundwater systems.

Faculty and graduate students conduct research in areas including: enhanced oil recovery; geostatistical reservoir characterization and mathematical modeling; geothermal engineering; natural gas engineering; production optimization; data assimilation and uncertainty quantification; properties of petroleum fluids; power production from wind and wave energy; well test analysis; carbon sequestration; multi-scale physics; and energy system modeling and optimization. Undergraduates are encouraged to participate in research projects.

The department is housed in the Green Earth Sciences Building. It operates laboratories for research in enhanced oil recovery processes, geological carbon storage operations, and geothermal engineering. Students have access to a variety of computers, computing platforms and software for research and course work.

Mission of the Undergraduate Program in Energy Resources Engineering

The mission of the Energy Resources Engineering major is to provide students with the engineering skills and foundational knowledge needed to flourish as technical leaders within the energy industry. Such skills and knowledge include resource assessment, choices among energy alternatives, and carbon management, as well as the basic scientific background and technical skills common to engineers. The curriculum is designed to prepare students for immediate participation in many aspects of the energy industry and graduate school.

Learning Outcomes (Undergraduate)
The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. apply skills developed in fundamental courses to engineering problems.
2. research, analyze, and synthesize solutions to an original and contemporary energy problem.
3. work independently and as part of a team to develop and improve engineering solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.

Graduate Programs in Energy Resources Engineering

The Energy Resources Engineering department offers two distinct degree programs at both the M.S. and Ph.D. levels. One program leads to the degrees of M.S. or Ph.D. in Petroleum Engineering, and the other leads to the degrees of M.S. or Ph.D. in Energy Resources Engineering. The Engineer degree, that is offered in either Petroleum Engineering or Energy Resources Engineering, is an extended form of the M.S. degree with additional course work and research.

Learning Outcomes (Graduate)
The objective is to prepare students to be technical leaders in the energy industry, academia and research organizations through completion of independent research as well as fundamental courses in the major field and in related sciences. Students are expected to:

1. apply skills developed in fundamental courses to engineering problems.
2. research, analyze, and synthesize solutions to an original and contemporary energy problem.
3. work independently and as part of a team to develop and improve engineering solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.
5. MS students are expected to develop in-depth technical understanding of energy problems at an advanced level.
6. Ph.D. students are expected to complete a scientific investigation that is significant, challenging and original.

Bachelor of Science in Energy Resources Engineering

The four-year program leading to the B.S. degree provides a foundation for careers in many facets of the energy industry. The curriculum includes basic science and engineering courses that provide sufficient depth for a wide spectrum of careers in the energy, engineering, and environmental fields.

One of the goals of the program is to provide experience integrating the skills developed in individual courses to address a significant design problem. In ENERGY 199 Senior Project and Seminar in Energy Resources, taken in the senior year, student teams identify and propose technical solutions for an energy-resource related problem of current interest.
**Program**

The requirements for the B.S. degree in Energy Resources Engineering are similar, but not identical, to those described in the "School of Engineering" section of this bulletin. Students must satisfy the University general education, writing, and language requirements. The normal Energy Resources Engineering undergraduate program automatically satisfies the University General Education Requirements (GERs) in the Disciplinary Breadth areas of Natural Sciences, Engineering and Applied Sciences, and Mathematics.

Courses taken to fulfill the requirements for the major (energy resources core and depth; mathematics; engineering fundamentals; science; and technology in society) must be taken for a letter grade if the option is offered.

The Energy Resources Engineering undergraduate curriculum is designed to prepare students for participation in the energy industry or for graduate studies, while providing requisite skills to evolve as the energy landscape shifts over the next half century. The program provides a background in mathematics, basic sciences, and engineering fundamentals, such as multiphase fluid flow in the subsurface. In addition, the curriculum is structured with flexibility that allows students to explore energy topics of particular individual interest and to study abroad.

In brief, the unit and subject requirements are:

The following courses constitute the normal program leading to a B.S. in Energy Resources Engineering. The program may be modified to meet a particular student’s needs and interests with the adviser’s prior approval.

**Required Core in Energy Resources Engineering**

**Honors Program**

The program in Energy Resources Engineering leading to the Bachelor of Science with Honors provides an opportunity for independent study and
research on a topic of special interest and culminates in a written report and oral presentation.

The honors program is open to students with a grade point average (GPA) of at least 3.5 in all courses required for the ERE major and minimum of 3.0 in all University course work. Qualified students intending to pursue honors must submit an Honors Program Application to the undergraduate program director no later than the eighth week of their ninth quarter, but students are encouraged to apply to the program during Winter Quarter of their junior year. The application includes a short form, an unofficial transcript, and a 2-3 page research proposal prepared by the student and endorsed by a faculty member who serves as the research adviser.

Upon approval, students enroll in the honors program via Axess. Students must enroll in a total of 9 units of ENERGY 193 Undergraduate Research Problems; these units may be spread out over the course of the senior year, and may include previous enrollment units for the same research project. Research undertaken for the honors program cannot be used as a substitute for regularly required courses. A formal written report must be submitted to the student’s research adviser no later than the fourth week of the student’s final quarter, and the report must be read, approved, and signed by the student’s faculty adviser and a second member of the faculty. Each honors candidate must make an oral presentation of his or her research results.

Minor in Energy Resources Engineering
The minor in Energy Resources Engineering requires the following three courses plus three additional electives. Courses must be planned in consultation with an ERE advisor. Appropriate substitutions are allowed with the consent of the advisor.

Master of Science in Petroleum Engineering
The objective is to prepare the student for professional work in the energy industry, or for doctoral studies, through completion of fundamental courses in the major field and in related sciences as well as independent research.

Students entering the graduate program are expected to have an undergraduate-level engineering or physical science background. Competence in computer programming in a high-level language (CS 106X Programming Abstractions (Accelerated) or the equivalent) and knowledge of engineering and geological fundamentals (ENERGY 120 Fundamentals of Petroleum Engineering, ENERGY 130 Well Log Analysis I, and GS 106 Sedimentary Geology and Depositional Systems) are prerequisites for taking most graduate courses.

The following are minimum requirements for a student in the Department of Energy Resources Engineering to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time
2. a cumulative grade point average (GPA) of 3.0
3. a grade point average (GPA) of 2.7 each quarter
4. a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to "NP" (not passed) at the end of the quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student’s adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

A balanced master’s degree program including engineering course work and research requires a minimum of one maximum-tuition academic year beyond the baccalaureate to meet the University residence requirements. Most full-time students spend at least one additional summer to complete the research requirement. An alternative master’s degree program based only on course work is available, also requiring at least one full tuition academic year to meet University residence requirements.

M.S. students who anticipate continuing in the Ph.D. program should follow the research option. M.S. students receiving financial aid normally require two academic years to complete the degree. Such students must take the research option.

The candidate must fulfill the following requirements:

1. Register as a graduate student for at least 45 units.
2. Submit a program proposal for the Master’s degree approved by the adviser during the first quarter of enrollment.
3. Complete 45 units with a grade point average (GPA) of at least 3.0. This requirement is satisfied by taking the core sequence, selecting one of the seven elective sequences, an appropriate number of
additional courses from the list of technical electives, and completing 6 units of master's level research. Students electing the course work only M.S. degree are strongly encouraged to select an additional elective sequence in place of the research requirement. Students interested in continuing for a Ph.D. are expected to choose the research option and enroll in 6 units of ENERGY 361 Master's Degree Research in Energy Resources Engineering. All courses must be taken for a letter grade.

4. Students entering without an undergraduate degree in Petroleum Engineering must make up deficiencies in previous training. Not more than 10 units of such work may be counted as part of the minimum total of 45 units toward the M.S. degree.

Research subjects include certain groundwater hydrology and environmental problems, energy industry management, flow of non-Newtonian fluids, geothermal energy, natural gas engineering, oil and gas recovery, pipeline transportation, production optimization, reservoir characterization and modeling, carbon sequestration, reservoir engineering, reservoir simulation, and transient well test analysis.

**Recommended Courses and Sequences**

The following list is recommended for most students. With the prior special consent of the student's adviser, courses listed under technical electives may be substituted based on interest or background.

Master of Science in Energy Resources Engineering

The objective of the M.S. degree in Energy Resources Engineering is to prepare the student either for a professional career or for doctoral studies. Students in the M.S. degree program must fulfill the following:

1. Complete a 45-unit program of study. The degree has two options:
   a. a course work degree, requiring 45 units of course work
   b. a research degree, with a minimum of 39 units of course work, and the remainder consisting of no more than 6 research units.
2. Course work units must be divided among two or more scientific and/or engineering disciplines and can include the core courses required for the Ph.D. degree.
3. All courses must be taken for a letter grade.
4. The program of study must be approved by the academic adviser and the department graduate program committee.
5. Students taking the research-option degree are required to complete an M.S. thesis, approved by the student’s thesis committee.

Recommended Courses and Sequences

The following list is recommended for most students. With the prior consent of the student’s adviser, courses listed under technical electives may be substituted based on interest or background.

Coterminal B.S. and M.S. Program in Energy Resources Engineering

The coterminal B.S./M.S. program offers an opportunity for Stanford University students to pursue a graduate experience while completing the B.S. degree in any relevant major. Energy Resources Engineering graduate students generally come from backgrounds such as chemical, civil, or mechanical engineering; geology or other earth sciences; or physics or chemistry.

The two types of M.S. degrees, the course work only degree and the research degree, as well as the courses required to meet degree requirements, are described above in the M.S. section. Both degrees require 45 units and may take from one to two years to complete depending on circumstances unique to each student.
Requirements to enter the program are: three letters of recommendation from faculty members or job supervisors, a statement of purpose, scores from the GRE general test, and a copy of Stanford University transcripts. While the department does not require any specific GPA or GRE score, potential applicants are expected to compete favorably with graduate student applicants.

**University Coterminal Requirements**

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

A Petroleum Engineering or Energy Resources Engineering master’s degree can be used as a terminal degree for obtaining a professional job in the engineering or energy industries, or in any related industry where application of physical principles or computer simulation skills are required. It can also be a stepping stone to a Ph.D. degree, that usually leads to a professional research job or an academic position.

Students should apply to the program any time after they have completed 120 undergraduate units, and in time to take ENERGY 120 Fundamentals of Petroleum Engineering, the basic introductory course in Autumn Quarter of the year they wish to begin the program. Contact the Department of Energy Resources Engineering to obtain additional information. Students should have a background at least through MATH 53 (http://exploredegrees.stanford.edu/schoolofearthsciences/energysourcesengineering/js/fckeditor/editor/fckeditor.html?InstanceName=attr_text&Toolbar=PageWizard) Ordinary Differential Equations with Linear Algebra and CS 106AB (http://exploredegrees.stanford.edu/schoolofearthsciences/energysourcesengineering/js/fckeditor/editor/fckeditor.html?InstanceName=attr_text&Toolbar=PageWizard) Programming Methodology before beginning graduate work in this program.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor’s and Master’s Degrees (p. 46)” section of this bulletin. For University coterminal master’s degree application forms, see the Registrar’s Publications page (https://registrar.stanford.edu/resources-and-help/forms/publications-and-online-guides/#Coterm).

**Doctor of Philosophy in Petroleum Engineering or Energy Resources Engineering**

The Ph.D. degree is conferred upon demonstration of high achievement in independent research and by presentation of the research results in a written dissertation and oral defense.

The following are minimum requirements for a student in the Department of Energy Resources Engineering to remain in good academic standing regarding course work:

1. no more than one incomplete grade at any time
2. a cumulative grade point average (GPA) of 3.25
3. a grade point average (GPA) of 2.7 each quarter
4. a minimum of 15 units completed within each two quarter period (excluding Summer Quarter).

Unless otherwise stated by the instructor, incomplete grades in courses within the department are changed to "NP" (not passed) at the end of the quarter after the one in which the course was given. This one quarter limit is a different constraint from the maximum one-year limit allowed by the University.

Academic performance is reviewed each quarter by a faculty committee. At the beginning of the next quarter, any student not in good academic standing receives a letter from the committee or department chair stating criteria that must be met for the student to return to good academic standing. If the situation is not corrected by the end of the quarter, possible consequences include termination of financial support, termination of departmental privileges, and termination from the University.

Students funded by research grants or fellowships from the department are expected to spend at least half of their time (a minimum of 20 hours per week) on research. Continued funding is contingent upon satisfactory research effort and progress as determined by the student’s adviser. After Autumn Quarter of the first year, students receive a letter from the department chair concerning their research performance. If problems are identified and they persist through the second quarter, a warning letter is sent. Problems persisting into a third quarter may lead to loss of departmental support including tuition and stipend. Similar procedures are applied in subsequent years.

The Ph.D. degree is awarded primarily on the basis of completion of significant, original research. Extensive course work and a minimum of 90 units of graduate work beyond the master’s degree are required. Doctoral candidates planning theoretical work are encouraged to gain experimental research experience in the M.S. program. Ph.D. students receiving financial assistance are limited to 10 units per quarter and often require more than three years to complete the Ph.D. beyond the M.S. degree.

In addition to University and the Department of Energy Resources Engineering basic requirements for the doctorate, the Petroleum Engineering Ph.D. and Energy Resources Engineering Ph.D. degrees have the following requirements:

1. Complete 135 units of total graduate work (90 units beyond the master’s degree). The 90 units are composed of a minimum of 36 units of research and a minimum of 36 units of course work. At least half of the classes must be at a 200 level or higher and all must be taken for a letter grade. Students with an M.S. degree or other specialized training from outside ERE are generally expected to include ENERGY 221 Fundamentals of Multiphase Flow, and ENERGY 240 Data science for geoscience, or their equivalents. The number and distribution of courses to be taken is determined with
input from the research advisers and department graduate program committee.

2. To achieve candidacy (usually during or at the end of the first year of enrollment), the student must complete 24 units of letter-graded course work beyond the M.S. degree, pass a written exam, develop a written Ph.D. research proposal, and choose a dissertation committee.

3. The research adviser(s) and two other faculty members comprise the dissertation reading committee. Upon completion of the dissertation, the student must pass a University oral examination in defense of the dissertation.

4. Act as a teaching assistant at least once, and enroll in ENERGY 359 Teaching Experience in Energy Resources Engineering.

36 units of course work is a minimum; in some cases the research adviser may specify additional requirements to strengthen the student’s expertise in particular areas. The 36 units of course work does not include required teaching experience (ENERGY 359 Teaching Experience in Energy Resources Engineering) nor required research seminars.

The dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy. Candidates who fail to meet this deadline must submit an Application for Extension of Candidacy for approval by the department chair if they wish to continue in the program.

Ph.D. students entering the department are required to hold an M.S. degree in a relevant science or engineering discipline. Students wishing to follow the Ph.D. program in Petroleum Engineering must hold an M.S. degree (or equivalent) in Petroleum Engineering. Students following the Ph.D. program in Energy Resources Engineering must hold an M.S. degree (or equivalent), although it need not be in Energy Resources Engineering.

After the second quarter at Stanford, a faculty committee evaluates the student’s progress. If a student is found to be deficient in course work and/or research, a written warning is issued. After the third quarter, the faculty committee decides whether or not funding should be continued for the student. Students denied funding after the third quarter are advised against proceeding with the Ph.D. proposal, though the student may choose to proceed under personal funding.

**Ph.D. Degree Qualification**

The procedure for Ph.D. qualification is identical for individuals who entered the department as an M.S. or a Ph.D. student. For students completing an M.S. in the department, the student formally applies to the Ph.D. program in the second year of the M.S. degree program. The student is considered for admission to the Ph.D. program along with external applicants. The admission decision is based primarily upon research progress and course work.

There are two steps to the qualification procedure. Students first take a preliminary written exam that is offered at the beginning of Autumn Quarter. The exam focuses upon synthesis of knowledge acquired from core courses in ERE or PE. Exams are different for ERE and PE Ph.D. students, but share a goal of having students exhibit capability to solve an engineering problem. Students take the exam consistent with their Ph.D. degree objective (i.e., ERE or PE).

Students continuing within the department take the written exam at the beginning of their first quarter as Ph.D. students. Students who completed their M.S. outside of the department take the written exam at the beginning of their fourth quarter as Ph.D. students. A student who does not pass the exam may not be allowed to take the exam a second time. Any student who does not pass the written exam is considered to have failed the qualifying exam. Any student who is deemed to have made insufficient research progress may not be allowed to take the preliminary exam and research progress is taken into account for pass, fail, and retake decisions.

A written Ph.D. proposal and oral defense are the main components of the second step. The written proposals are reviewed by three faculty members. Students are provided a template of what constitutes an acceptable proposal. Students subsequently make an oral presentation of their proposal to three faculty members including material such as a literature review, identification of key unanswered research questions, proposed work outline, and an oral presentation. Following the presentation, the student is questioned on the research topic and general field of study. The student can pass, pass with qualifications requiring more classes or teaching assistantships, or fail. Students who completed their M.S. in the department prepare and defend their proposal in their third quarter (not counting Summer) as a Ph.D. student. Their adviser may request an additional quarter given extenuating circumstances such as a major change in research focus between M.S. and Ph.D. programs. Students who completed their M.S. outside of the department complete the proposal in their fourth quarter (not counting summer) of study.

Students who have passed the qualification procedure and later wish to change their degree objective from PE to ERE, or vice versa, may petition the graduate standing committee. A switch of degree objective is not automatically granted. Petitions are made in writing and include a brief explanation of the request for a degree objective and a plan to make up subject matter deficiencies. At the minimum, students who petition are expected to complete ultimately all courses listed as contributing subject matter to the written exam in the area of their degree objective with a minimum grade of 'B'. The graduate standing committee decides whether petitions have merit and if additional steps are needed to address deficiencies. Such switches in degree objective are considered provisional until all conditions have been met.

**Course Work**

The 36 units of course work may include graduate courses in Energy Resources Engineering (numbered 200 and above) and courses chosen from the following list. Other courses may be substituted with prior approval of the adviser. In general, non-technical courses are not approved.

Students who enter directly into the Ph.D. program after receiving an M.S. degree from another university are expected to show expertise in the core courses required for Stanford’s M.S. degree in Energy Resources Engineering, either by including those courses in their Ph.D. degree or by showing that they have taken equivalent courses during their M.S. degree.

For a Ph.D. in Energy Resources Engineering, 12 of the 36 required course units must be completed from the following list of courses. If the student has not taken ENERGY 293A Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution, ENERGY 293B Fundamentals of Energy Processes, ENERGY 293C Energy from Wind and Water Currents or their equivalent during the M.S., then these courses must be taken during the Ph.D. (they satisfy 9 of the required 12 units).

Associate Professors: Margot Gerritsen, Tapan Mukerji

Assistant Professors: Ilenia Battiato, Adam Brandt

Courtesy Professors: Stephan A. Graham, Mark Jacobson

* Joint appointment with Geological Sciences
GEOLOGICAL SCIENCES

Courses offered by the Department of Geological Sciences (formerly the Department of Geological and Environmental Sciences) are listed under the subject code GS on the Stanford Bulletin's ExploreCourses web site [https://exploreCourses.stanford.edu/search?q=GS&view=catalog&palette=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-departmentcode-GS=on&filter-catalognumber-GS=on&filter-coursestatus-Active=on&filter-catalognumber-GS=on].

The geological sciences are naturally interdisciplinary, and include: the study of earth materials, earth processes, and how they have changed over Earth's 4.56 billion year history. More specifically, courses and research within the department address: the chemical and physical makeup and properties of minerals, rocks, soils, sediments, and water; the formation and evolution of Earth and other planets; the processes that deform Earth's crust and shape Earth's surface; the stratigraphic, paleobiological, and geochemical records of Earth history including changes in climate, oceans, and atmosphere; present-day, historical, and long-term feedbacks between the geosphere and biosphere, and the origin and occurrence of our natural resources.

The department's research is critical to the study of natural hazards (earthquakes, volcanic eruptions, landslides, and floods), environmental and geological engineering, surface and groundwater management, the assessment, exploration, and extraction of energy, mineral and water resources, ecology and conservation biology, remediation of contaminated water and soil, geological mapping and land use planning, and human health and the environment.

A broad range of instrumentation for elemental and radiogenic/stable isotope analysis is available, including ion microprobe, electron microprobe, thermal and gas source mass spectrometry, inductively coupled plasma mass spectrometry and nuclear magnetic resonance. The Center for Materials Research and facilities at the SLAC National Accelerator Laboratory, Stanford Synchrotron Radiation Laboratory (SSRL), and the U.S. Geological Survey in nearby Menlo Park are also available for the department's research. Branner Library, devoted exclusively to the Earth Sciences, represents one of the department's most important resources. The department also maintains rock preparation (crushing, cutting, polishing), mineral separation, and microscopy facilities.

Mission of the Undergraduate Program in Geological Sciences

The purpose of the undergraduate program in Geological Sciences is to provide students with a broad background in the fundamentals of the Earth sciences and the quantitative, analytical, and communications skills necessary to conduct research and think critically about questions involving the Earth. The major provides excellent preparation for graduate school and careers in geological and environmental consulting, land use planning, law, teaching, and other professions in which an understanding of the Earth and a background in science are important.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to develop and demonstrate:

1. an understanding of fundamental concepts in Earth science.
2. the ability to collect, analyze, and interpret geological and environmental data using a variety of techniques to test hypotheses.
3. the ability to address real geological and/or environmental problems in the field.
4. the ability to communicate scientific knowledge orally, visually, and in writing.

Graduate Programs in Geological Sciences

Graduate Studies in the Department of Geological Sciences involve academic course work and independent research. Students are prepared for careers as professional scientists in research, education, or the application of the earth sciences to mineral, energy, and water resources. Programs lead to the M.S., Engineer, and Ph.D. degrees. Course programs in the areas of faculty interest are tailored to the student's needs and interests with the aid of his or her research adviser. Students are encouraged to include in their program courses offered in other departments in the School of Earth, Energy and Environmental Sciences as well as in other departments in the University. Diplomas designate degrees in Geological and Environmental Sciences or Geological Sciences and may also indicate the following specialized fields of study: Geostatistics and Hydrogeology.

Learning Outcomes (Graduate)

The purpose of the master's program in Geological Sciences is to continue a student's training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

On April 16, 2015, the Senate of the Academic Council approved the Bachelor of Science in Geological Sciences. Students who declared the Bachelor of Science in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

Bachelor of Science in Geological Sciences

The major consists of five interrelated components:

1. Earth Sciences Fundamentals—Students must complete a set of core courses that introduce the properties of Earth materials, the processes that change the Earth, and the timescales over which those processes act. These courses provide a broad foundational knowledge that can lead to specialization in many different disciplines of the geological and environmental sciences.
2. Quantitative and Analytical Skills—Students must complete adequate course work in mathematics, chemistry, and physics or biology. In addition, they learn analytical techniques specific to the Earth sciences through the laboratory component of courses.
3. Advanced Course Work and Research—Students gain breadth and depth in upper-level electives and are encouraged to apply these skills and knowledge to problems in the Earth sciences through directed research.
4. Field Research Skills—Most GS courses include field trips and/or field-based projects. In addition, students must complete at least six weeks of field research through departmental offerings (GS 105
Introduction to Field Methods and GS 190 Research in the Field), in which they learn and apply field techniques, field mapping, and the prepare a written report.

5. Communication Skills—To fulfill the Writing in the Major requirement, students take a writing-intensive senior seminar (GS 150 Senior Seminar: Issues in Earth Sciences), in which they give both oral and written presentations that address current research in the earth sciences.

The major requires at least 93 units; letter grades are required in all courses if available. Students interested in the GS major should consult with the undergraduate program coordinator for information about options within the curriculum.

**Course Sequence (103-121 units total)**

**Core Requirement**

Students are required to take all of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>

</tbody>
</table>

**Depth in the Discipline Requirement (10 Units)**

To allow students to go into greater depth in the major, students must complete at least 10 units of electives drawn primarily from the list above and other upper-level courses in GS (including graduate-level courses). Additional courses in Geophysics, ESS, and ERE may be counted towards the elective units if they allow a student to pursue a topic in depth; these options should be discussed with an adviser. A maximum of 3 elective units may be fulfilled by:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>GS 192</td>
<td>Undergraduate Research in Geological Sciences</td>
</tr>
<tr>
<td>GS 197</td>
<td>Senior Thesis</td>
</tr>
<tr>
<td>GS 198</td>
<td>Special Problems in Geological Sciences</td>
</tr>
</tbody>
</table>

Honors research (GS 199 Honors Program) may fulfill up to 4 elective units.

**Required Supporting Mathematics (20 Units)**

Choose one of the following equivalent series:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 19 &amp; MATH 20 &amp; MATH 21</td>
<td>Calculus and Calculus and Calculus</td>
<td>10</td>
</tr>
<tr>
<td>or a score of 4-5 on the Calculus BC exam</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

And at least TWO of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CME 100</td>
<td>Vector Calculus for Engineers</td>
<td>5</td>
</tr>
<tr>
<td>or MATH 51</td>
<td>Linear Algebra and Differential Calculus of Several Variables</td>
<td></td>
</tr>
<tr>
<td>CME 102</td>
<td>Ordinary Differential Equations for Engineers</td>
<td>5</td>
</tr>
<tr>
<td>or MATH 52</td>
<td>Integral Calculus of Several Variables</td>
<td></td>
</tr>
<tr>
<td>CME 104</td>
<td>Linear Algebra and Partial Differential Equations for Engineers</td>
<td>5</td>
</tr>
</tbody>
</table>
Required Supporting Sciences (16-23 Units)
Advanced placement credit may be accepted for these courses as determined by the relevant departments.

Chemistry

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEM 31A</td>
<td>Chemical Principles I</td>
<td>5-10</td>
</tr>
<tr>
<td>&amp; CHEM 31B</td>

</tbody>
</table>

Field Research

Field research skills are a critical component of the undergraduate curriculum in GS. The conventional and most straightforward way for undergraduates to meet the field requirement is to take the GS courses (GS 105 Introduction to Field Methods and GS 190 Research in the Field):

- GS 105 Introduction to Field Methods, is a two-week introduction to field techniques and geologic mapping that is taught every year in the White Mountains of eastern California prior to the start of Autumn Quarter in September. This course gives students the tools to undertake geologic research in the field. GS 105 Introduction to Field Methods is required of all GS majors and is the framework upon which all subsequent undergraduate field-related instruction is based.
- GS 190 Research in the Field, gives GS undergraduates additional training in field research. This course provides undergraduates with a team-based experience of collecting data to answer research questions and is directed by faculty and graduate students. Offered in June and/or September.

By taking GS 105 Introduction to Field Methods and two iterations of GS 190 Research in the Field, GS undergraduates develop the broad experience and confidence necessary to go out and evaluate a geological or environmental geology question by collecting field-based data. The main goal is that, upon graduation, GS undergraduates will be able to plan and execute independent field research.

It is also possible to substitute non-Stanford courses to allow flexibility in fulfilling the field requirement. A modified version of an existing field-based course such as Stanford at Sea/Australia/Hawaii may fulfill one GS 190 Research in the Field requirement. To receive credit for GS 190, a proposal must be filed at the end of Winter Quarter with the field program committee which evaluates it for suitability. Students subsequently enroll in GS 190 with a specific instructor or their faculty mentor who evaluates the final report from the fieldwork.

GS 190 Research in the Field can also be satisfied by enrolling in a single four-to-six week geology field camp offered by another institution. This externally administered experience can substitute for two GS 190 courses, subject to approval by the Undergraduate Curriculum Committee.

Engineering Geology and Hydrogeology

Undergraduate Specialized Curriculum

The Engineering Geology and Hydrogeology curriculum is intended for undergraduates interested in the application of geological and engineering data and principles to the study of rock, soil, and water to recognize and interpret geological and environmental factors affecting engineering structures and groundwater resources. Students learn to characterize and assess the risks associated with natural geological hazards, such as landslides and earthquakes, and with groundwater flow and contamination. The curriculum prepares students for graduate programs and professional careers in engineering, environmental geology, geology, geotechnical engineering, and hydrogeology.

GS majors who elect the Engineering Geology and Hydrogeology curriculum are expected to complete a core course sequence and a set of courses in supporting sciences and mathematics. The core courses come from Earth Sciences and Engineering. Any substitutions for core courses must be approved by the faculty adviser and through a formal petition to the undergraduate program director. In addition, four elective courses, consistent with the core curriculum and required of all majors, are to be chosen with the advice and consent of the adviser. Typically, electives are chosen from the list below. Letter grades are required if available.

Course Sequence (100-113 Units Total)

Breadth (15-20 Units)

Select one course from each of the five topics listed below. Courses listed as options in multiple categories (either required foundations or breadth requirements) can only be used to fulfill one requirement. Students are encouraged to work with their academic advisor to develop cross-cutting themes among their breadth requirements. Examples of cross-cutting themes could include: Earth and Energy Resources, Natural Hazards, Coastal Processes, Freshwater, etc.

Honors Program
The honors program provides an opportunity for year-long independent study and research on a topic of special interest, culminating in a written thesis. Students select research topics in consultation with the faculty adviser of their choosing. Research undertaken for the honors program may be of a theoretical, field, or experimental nature, or a combination of these approaches. The honors program is open to students with a GPA of at least 3.5 in GS courses and 3.0 in all university course work. Modest financial support is available from several sources to help defray laboratory and field expenses incurred in conjunction with honors research. Interested students must submit an application, including a research proposal, to the department by the end of their junior year.

Upon approval of the research proposal and entrance to the program, course credit for the honors research project and thesis preparation is assigned by the student's faculty adviser within the framework of GS 199 Honors Program; the student must complete a total of 9 units over the course of the senior year. Up to 4 units of GS 199 may be counted towards the elective requirement, but cannot be used as a substitute for regularly required courses.

Both a written and oral presentation of research results are required. The thesis must be read, approved, and signed by the student’s faculty adviser and a second member of the faculty. In addition, honors students must participate in the GS Honors Symposium in which they present their research to the broader community. Honors students in GS are also eligible for the Firestone medal, awarded by Undergraduate Advising and Research (http://ual.stanford.edu) for exceptional theses.

Minor in Geological Sciences
The minor in GS consists of a small set of required courses plus 12 elective units. A wide variety of courses may be used to satisfy these elective requirements. All courses must be taken for a letter grade.

Electives (12 Units)
Students must take a minimum of 12 additional units drawn primarily from the Breadth in the Discipline list in the GS major (http://www.stanford.edu/dept/registrar/bulletin/5038.htm); a majority of units must be from classes within the GS department. Up to 3 units of Stanford Introductory Seminars in GS may be counted.

Students pursuing a minor in GS are encouraged to participate in the senior seminar (GS 150 Senior Seminar: Issues in Earth Sciences) and in field research (GS 105 Introduction to Field Methods)

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Geological Sciences. Students who matriculated into the Master of Science in Geological and Environmental Sciences have the option of changing the name of their degree to Geological Sciences. Degree requirements remain the same.

Coterminal Master of Science Degree in Geological Sciences
The coterminal B.S./M.S. program offers students the opportunity to pursue graduate research and an M.S. degree concurrently with or subsequent to their B.S. studies. The M.S. degree can serve as an entrance to a professional degree in subdisciplines within the Earth sciences such as engineering geology and environmental geology, or to graduate course work and research as an intermediate step in pursuit of the Ph.D. Regardless of professional goals, coterminal B.S./M.S. students are treated as members of the graduate community and are expected to meet all of the standards set for regular M.S. students. Applicants must have earned no fewer than 120 units toward graduation, and must submit their application no later than the quarter prior to the expected completion of their undergraduate degree, normally the Winter Quarter prior to Spring Quarter graduation. The application includes a statement of purpose, a current Stanford transcript, official Graduate Record Examination (GRE) scores, letters of recommendation from two members of the Stanford faculty (at least one of whom must be in the GS department), and a list of courses in which they intend to enroll to fulfill the M.S. degree requirements. Specific research interests should be noted in the statement of purpose and discussed with a member of the GS faculty prior to submission of the application. Coterminal students must complete a thesis describing research results.

Students must meet all requirements for both the B.S. and M.S. degrees. Students may either:
1. complete 180 units required for the B.S. degree and then complete three full-time quarters (45 units at the 100-level or above) for the M.S. degree
2. complete a total of fifteen quarters during which the requirements of the two degrees are fulfilled concurrently.

At least half of the courses used to satisfy the 45-unit requirement must be designated as being primarily for graduate students, normally at the 200-level or above. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement. Further information about this program may be obtained from the GS office.

University Coterminal Requirements
Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer
of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Admission
For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

Master of Science in Geological Sciences
Objectives
The purpose of the master’s program in Geological Sciences is to continue a student’s training in one of a broad range of earth science disciplines and to prepare students for either a professional career or doctoral studies.

Procedures
In consultation with the adviser, the student plans a program of course work for the first year. The student should select a thesis adviser within the first year of residence and submit to the thesis adviser a proposal for thesis research as soon as possible. The academic adviser supervises completion of the department requirements for the M.S. program (as outlined below) until the research proposal has been accepted; responsibility then passes to the thesis adviser. The student may change either thesis or academic advisers by mutual agreement and after approval of the Director of Graduate Studies.

Requirements
The University’s requirements for M.S. degrees are outlined in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.html) section of this bulletin. Practical training (GS 385 Practical Experience in the Geosciences) may be required by some programs, with adviser approval, depending on the background of the student. Additional department requirements include the following:

1. A minimum of 45 units of course work at the 100 level or above.  
   a. Half of the courses used to satisfy the 45-unit requirement must be intended as being primarily for graduate students, usually at the 200 level or above.
   b. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
   c. Some students may be required to make up background deficiencies in addition to these basic requirements.

2. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different GS faculty members.

3. Each student must have a research adviser who is a faculty member in the department and is within the student’s thesis topic area or specialized area of study.

4. M.S. students must complete at least one TA appointment (25%). Additional TA quarters may be considered and/or required in consultations with the research adviser, depending on academic goals, funding availability, or the requirements of individual graduate programs.

5. Each student must complete a thesis describing his or her research. Thesis research should begin during the first year of study at Stanford and should be completed before the end of the second year of residence.

6. Early during the thesis research period, and after consultation with the student, the thesis adviser appoints a second reader for the thesis, who must be approved by the Director of Graduate Studies; the thesis adviser is the first reader. The two readers jointly determine whether the thesis is acceptable for the M.S. degree in the department.

Doctor of Philosophy in Geological Sciences
Objectives
The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship, high attainment in a particular field of knowledge, and the ability to conduct independent research. To this end, the objectives of the doctoral program are to enable students to develop the skills needed to conduct original investigations in a particular discipline or set of disciplines in the earth sciences, to interpret the results, and to present the data and conclusions in a publishable manner.

Admission
For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores. Previously admitted students who wish to change their degree objective from M.S. to Ph.D. may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Requirements
The University’s requirements for the Ph.D. degree are outlined in the "Graduate Degrees (p. 50)" section of this bulletin. Practical training (GS 385 Practical Experience in the Geosciences) may be required by some programs, with adviser approval, depending on the background
of the student. A summary of additional department requirements is presented below:

1. Ph.D. students must complete the required courses in their individual program or in their specialized area of study with a grade point average (GPA) of 3.0 (B) or higher, or demonstrate that they have completed the equivalents elsewhere. Ph.D. students must complete a minimum of four graduate level, letter-grade courses of at least 3 units each from four different faculty members on the Academic Council in the University. By the end of Spring Quarter of their first year in residence, students must complete at least three graduate level courses taught by a minimum of two different GS faculty members.

2. Ph.D. students must complete at least one TA appointment (25%). Additional TA quarters may be considered and/or required in consultations with the research advisor, depending on academic goals, funding availability, or the requirements of individual doctoral programs.

3. Each student must qualify for candidacy for the Ph.D. by the end of the sixth quarter in residence, excluding summers. Department procedures require selection of a faculty thesis adviser, preparation of a written research proposal, approval of this proposal by the thesis adviser, selection of a committee for the Ph.D. qualifying examination, and approval of the membership by the graduate coordinator and chair of the department. The research examination consists of three parts: oral presentation of a research proposal, examination on the research proposal, and examination on subject matter relevant to the proposed research. The exam should be scheduled prior to May 1, so that the outcome of the exam is known at the time of the annual spring evaluation of graduate students.

4. Upon qualifying for Ph.D. candidacy, the student and thesis adviser, who must be a department faculty member, choose a research committee that includes a minimum of two faculty members in the University in addition to the adviser. Annually, during the Spring Quarter, the candidate must organize a meeting of the research committee to present a brief progress report covering the past year.

5. Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research. The format of the dissertation must meet University guidelines. The student is strongly urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

6. The doctoral dissertation is defended in the University oral examination. The research adviser and two other members of the research committee are determined to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

Ph.D. Minor in Geological Sciences

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in Geological Sciences must complete, with a GPA of 3.0 (B) or better, 20 units in the geosciences in lecture courses intended for graduate students. The selection of courses must be approved by the student’s GS advisor and the department chair.

Emeriti: (Professors) Atilla Aydin, Dennis K. Bird*, W. Gary Ernst, James C. Ingle, Jr., Juhn G. Liou, Keith Loague, David D. Pollard

Chair: Jonathan Payne

* Recalled to active duty

Cognate Courses

Many courses offered within the School of Earth, Energy and Environmental Sciences, as well as courses in other schools with a significant Earth sciences component, may be used in satisfaction of optional requirements for the Geological Sciences degree. Undergraduates should discuss the options available to them with the undergraduate program coordinator; graduate students should discuss options with their advisers.

The following courses outside the School of Earth, Energy and Environmental Sciences are particularly applicable:

Overseas Studies Courses in Geological Sciences

The Bing Overseas Studies Program (http://bosp.stanford.edu) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).
GEOPHYSICS

Courses offered by the Department of Geophysics are listed under the subject code GEOPHYS on the Stanford Bulletin’s ExploreCourses web site.

Geophysics is the branch of Earth science concerned with exploring and analyzing active processes of the Earth through physical measurement. The undergraduate and graduate programs are designed to provide a background of fundamentals in science, and courses to coordinate these fundamentals with the principles of geophysics. The program leading to the Bachelor of Science (B.S.) in Geophysics permits many electives and a high degree of flexibility for each student. Graduate programs provide specialized training for professional work in resource exploration, research, and education, and lead to the degrees of Master of Science and Doctor of Philosophy.

The Department of Geophysics is housed in the Ruth Wattis Mitchell Earth Sciences Building. It has numerous research facilities, among which are a state-of-the-art broadband seismic recording station, high pressure and temperature rock properties and rock deformation laboratories, various instruments for field measurements including seismic recorders, nine dual frequency GPS receivers, and field equipment for measuring in-situ stress at great depth. Current research activities include crustal deformation; earthquake seismology and earthquake mechanics; reflection, refraction, and tomographic seismology; rock mechanics, rock physics; seismic studies of the continental lithosphere; remote sensing; environmental geophysics; and synthetic aperture radar studies.

**Mission of the Undergraduate Program in Geophysics**

The mission of the undergraduate program in Geophysics is to expose students to a broad spectrum of geophysics, including resource exploration, environmental geophysics, seismology, and tectonics. Students in the major obtain a solid foundation in the essentials of mathematics, physics, and geology, and build upon that foundation with advanced course work in Geophysics to develop the in-depth knowledge they need to pursue advanced graduate study and professional careers in government or the private sector.

**Learning Outcomes (Undergraduate)**

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department’s undergraduate program. Students are expected to:

1. understand the physics and geology that form the basis for geophysical observation and measurement.
2. understand Earth structure and evolution.
3. identify the physical processes governing the behavior of common geophysical systems.
4. be able to explain the principles of applying geophysical methods to societally relevant problems, including natural hazards, resource exploration and management, and environmental issues.
5. be able to quantitatively describe the behavior of natural systems and the principles of geophysical measurement with physics-based mathematical models.
6. investigate these models by solving the governing equations with a combination of analytical and computational methods.
7. make their own observations with a variety of geophysical instruments, and reduce, model, and interpret their data and uncertainties.
8. effectively communicate their scientific knowledge through written and oral presentations.
9. be able to interpret and evaluate the published literature and oral and poster presentations at national meetings.

**Graduate Programs in Geophysics**

University requirements for the M.S. and Ph.D. are described in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin. Lecture course units applied to graduate degree program requirements must be taken for a letter grade if the course is offered for a letter grade.

**Learning Outcomes (Graduate)**

The objective of the graduate program in Geophysics is to prepare students to be leaders in the geophysics industry, academia, and research organizations through completion of fundamental courses in the major field and in related sciences, as well as through independent research. Students are expected to:

1. apply skills developed in fundamental courses to geophysical problems.
2. research, analyze, and synthesize solutions to an original and contemporary geophysics problem.
3. work independently and as part of a team to develop and improve geophysics solutions.
4. apply written, visual, and oral presentation skills to communicate scientific knowledge.
5. master’s students are expected to develop in-depth technical understanding of geophysics problems at an advanced level.
6. doctoral students are expected to complete a scientific investigation that is significant, challenging and original.

**Bachelor of Science in Geophysics**

The following courses are required for the B.S. degree in Geophysics. A written report on original research or an honors thesis is also required through participation in and GEOPHYS 199 Senior Seminar: Issues in Earth Sciences in Autumn Quarter of the senior year. Seniors in Geophysics who expect to do graduate work should take the Graduate Record Examination (GRE) early in their final undergraduate year.

**Student Internship and Research**

Students are encouraged to participate in research and field activities, either for credit through the Undergraduate Research (GEOPHYS 197) or approved research internships. Faculty members in the department can provide students with research opportunities. Students are expected to undergo some form of research training, either in independent study or through participation in and GEOPHYS 199 Senior Seminar: Issues in Earth Sciences in Autumn Quarter of the senior year. A written report on original research or an honors thesis is also required through participation in and GEOPHYS 199 Senior Seminar: Issues in Earth Sciences in Autumn Quarter of the senior year.
or GEOPHYS 198 Honors Program
GEOPHYS 199 Senior Seminar: Issues in Earth Sciences 3
GEOPHYS 201 Frontiers of Geophysical Research at Stanford: Faculty Lectures 1

Total Units 29-34

Geophysics Breadth Courses (18-29 units)
Choose six upper-level courses, one from each of the following six areas (but an additional Geophysics class may substitute for either the Physics or the Geology breadth areas):

1. Resources, hazards, and the environment

   Select one of the following:
   - GEOPHYS 118 3-5
   - GEOPHYS 182 Reflection Seismology 3
   - GEOPHYS 183 Reflection Seismology Interpretation 1-4
   - GEOPHYS 185 Rock Physics for Reservoir Characterization 3
   - ENERGY 120 Fundamentals of Petroleum Engineering 3

   Total Units 16-21

2. Whole-Earth Geophysics

   Select one of the following:
   - GS 122 Planetary Systems: Dynamics and Origins 3-4
   - GEOPHYS 141 Remote Sensing of the Oceans 3-4
   - GEOPHYS 184 Journey to the Center of the Earth 3
   - GEOPHYS 186 Tectonophysics 3

   Total Units 15-17

3. Numerical and computational methods

   Select one of the following:
   - GEOPHYS 188 Basic Earth Imaging (Practical Earth Imaging) 2-3
   - GEOPHYS 211 Environmental Soundings Image Estimation 3
   - GEOPHYS 281 Geophysical Inverse Problems 3
   - ENERGY 160 Modeling Uncertainty in the Earth Sciences 3
   - EARTH 211 Software Development for Scientists and Engineers 3
   - ENERGY 160 Modeling Uncertainty in the Earth Sciences 3
   - EE 102A Signal Processing and Linear Systems I 4
   - CME 108 Introduction to Scientific Computing 3
   - CS 106A Programming Methodology and Programming Abstractions 6-10
   - CS 106B Programming Abstractions 3-5
   - PHYSICS 113 Computational Physics 4

   Total Units 15-27

4. Geophysical fluid dynamics

   Select one of the following:
   - GEOPHYS 146A 3
   - ESS 146B 3
   - GEOPHYS 181 Fluids and Flow in the Earth: Computational Methods 3
   - ENERGY 121 Fundamentals of Multiphase Flow 3
   - ESS 220 Physical Hydrogeology 4
   - CEE 162D Introduction to Physical Oceanography 4

5. Physics

   Select one of the following:
   - EE 142 Engineering Electromagnetics (formerly EE 141) 4
   - ME 80 Mechanics of Materials 4
   - PHYSICS 110 Advanced Mechanics 4
   - PHYSICS 120 Intermediate Electricity and Magnetism I 4

6. Geology

   Select one of the following:
   - GS 102 Earth Materials: Introduction to Mineralogy 3
   - GS 104 Introduction to Petrology 3-4
   - GS 110 Rock Deformation and Tectonics 3-5
   - GS 106 Sedimentary Geology and Depositional Systems 4

Supporting Mathematics Courses
Students must take one of the following series (15 or 19 units):

- CME 100 Vector Calculus for Engineers 5
- CME 102 Ordinary Differential Equations for Engineers 5
- CME 104 Linear Algebra and Partial Differential Equations for Engineers 5

Supporting Science Courses
Students must take all of the following (8-27 units):

- CHEM 31A & CHEM 31B Chemical Principles I and Chemical Principles II 5-10
- CHEM 31X Chemical Principles Accelerated or a score of 5 on the Chemistry AP exam 5
- PHYSICS 41 Mechanics or PHYSICS 61 Mechanics and Special Relativity or a score of 4-5 on the Physics C Mechanics AP exam 4
- PHYSICS 43 Electricity and Magnetism or PHYSICS 63 Electricity, Magnetism, and Waves or a score of 4-5 on the Physics C E & M AP exam 4
- PHYSICS 45 Light and Heat or PHYSICS 65 Quantum and Thermal Physics 4

Optional Field Class
- GS 105 Introduction to Field Methods 3
- GEOPHYS 171 Tectonics Field Trip 3

Honors Program
The department offers a program leading to the B.S. degree in Geophysics with honors. The guidelines are:

1. Select a research project, either theoretical, field, or experimental, that has the approval of an adviser.
2. Submit a proposal to the department, which decides on its suitability as an honors project. Necessary forms are in the department office.
3. Course credit for the project is assigned by the adviser within the framework of GEOPHYS 198 Honors Program.
4. The decision whether a given independent study project does or does not merit an award of honors is made jointly by the department and the student’s adviser. This decision is based on the quality of both the honors work and the student’s other work in Earth Sciences.
5. The work done on the honors program cannot be used as a substitute for regularly required courses.

**Minor in Geophysics**

The Geophysics minor provides students with a general knowledge of Geophysics in addition to a background in the related fields of physics, mathematics, and geology. The minor consists of one required class (3 units), three electives (min. 9 units), and supporting classes in geology, mathematics, and physics.

**Geophysics Core Courses (12-14 units)**

1. Required course:
   - GEOPHYS 110 Introduction to the foundations of contemporary geophysics

2. Plus three additional approved electives, typically chosen from:
   - Select three of the following:
     - GEOPHYS 118 Ice, Water, Fire
     - GEOPHYS 130 Introductory Seismology
     - GEOPHYS 150 Geodynamics: Our Dynamic Earth
     - GEOPHYS 162 Laboratory Methods in Geophysics
     - GEOPHYS 184 Journey to the Center of the Earth
     - GEOPHYS 186 Tectonophysics
     - GEOPHYS 190 Near-Surface Geophysics

3. Supporting Math & Science:
   - GS 1 Introduction to Geology
   - CME 100 Vector Calculus for Engineers
   - MATH 51 Linear Algebra and Differential Calculus of Several Variables
   - PHYSICS 21 Mechanics, Fluids, and Heat
   - PHYSICS 22 Mechanics, Fluids, and Heat Laboratory
   - PHYSICS 23 Electricity, Magnetism, and Optics
   - PHYSICS 24 Electricity, Magnetism, and Optics Laboratory
   - PHYSICS 41 Mechanics
   - PHYSICS 43 and Electricity and Magnetism
   - PHYSICS 41 Mechanics
   - PHYSICS 45 and Light and Heat
   - or equivalent AP scores

**Coterminal Master of Science Program in Geophysics**

The department offers a coterminal M.S. degree for students wishing to obtain more specialized training in Geophysics than is normally possible during study for the B.S. degree alone. An M.S. degree should be considered as the professional degree in Geophysics, and is aimed at students wishing to work in a related industry, or students desiring more focused academic study in the field than the B.S. program allows.

The coterminal M.S. degree in Geophysics is offered in conjunction with any relevant undergraduate program at Stanford. Geophysics students often enter the department with degrees in Earth Sciences, Mathematics, Physics, Chemistry, or other natural science or engineering fields. Any of these are suitable for the coterminal Geophysics program, and interested students are encouraged to discuss their own background with a Geophysics faculty member.

**Admission**

To apply for admission to the Geophysics coterminal M.S. program, students must submit the Coterminal Online Application (https://applyweb.com/stanterm), including submission of a transcript, a statement of purpose, and at least two letters of recommendation. Applications with a letter of recommendation from a Geophysics faculty are generally considered the strongest. Additional letters from other academic or work-related persons also strengthen the application. There are no specific GPA requirements for entry, but the department looks for proven performance in a rigorous undergraduate curriculum as a prerequisite for admission.

Undergraduates with at least junior-level standing may apply, and applications should be submitted by the Autumn Quarter of the senior year.

**Units**

The graduation requirements to obtain the degree are identical to those for the regular Geophysics master’s degree.

**University Coterminal Requirements**

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

**Master of Science in Geophysics**

**Objectives**

To enhance the student’s training for professional work in geophysics through the completion of fundamental courses, both in the major fields and in related sciences, and to begin independent work and specialization.

**Degree Requirements**

The candidate must complete 45 units from the following groups of courses:

1. Complete 15 units of Geophysics lecture courses with at least 9 units numbered 200 or higher.
2. Complete 9 units of non-Geophysics lecture courses in the School of Earth, Energy, and Environmental Sciences, with at least 3 units numbered 200 level or higher.
3. Complete 1-4 electives selected from courses numbered 100 or higher from mathematics, chemistry, engineering, physics, relevant biology, computer science, ecology, hydrology, or within the School of Earth, Energy, and Environmental Sciences. At least one course must be numbered 200 or higher. (GEOPHYS 201 and EARTH 300 are excluded.)

4. Enroll for at least three quarters of research seminar (GEOPHYS 385 series).

5. At least 6, but not more than 15, of the 45 units must be earned by enrollment in GEOPHYS 400 Research in Geophysics for independent work on a research problem resulting in a written report accepted and archived by the candidate’s faculty. A summer internship is encouraged as venue for research, but no academic credit is given.

6. Submit a program proposal for approval by a faculty adviser in the first quarter of enrollment.

7. Each candidate must present and defend the results of his or her research at a public oral presentation attended by at least two faculty members; and turn in a thesis/report to adviser.

8. Students are required to attend department seminars.

**Doctor of Philosophy in Geophysics**

**Objectives**

The Ph.D. degree is conferred upon evidence of high attainment in Geophysics and ability to conduct an independent investigation and present the results of such research.

**Transfer Credit**

An incoming student with a relevant master of science degree may apply for a departmental waiver of up to 12 units of the 30 lecture units required for the Ph.D. degree, for certain courses as approved by the departmental graduate faculty adviser. Credit for courses generally requires that students identify an equivalent Stanford course and obtain the signature of the Stanford faculty responsible for that course, stating its equivalence.

**Requirements for the Degree**

A minimum of 135 units of graduate study at Stanford must be satisfactorily completed. Required courses used to fulfill requirements for the Ph.D. in Geophysics must be lecture courses (component LEC) taken for a letter grade (unless S/NC is the only option offered). Geophysics courses used to fulfill requirements for the Ph.D. must be taught by Geophysics faculty (or senior academic staff if supervised by a faculty member). Lecture courses on geophysical topics taught by visiting faculty can only be counted as fulfilling a Geophysics requirement if approved in advance by the department Chair and the Director of Graduate Studies. Students are required to attend the department seminars and to complete sufficient units of independent work on a research problem to meet the 135-unit University requirement. 12 units must be met by participation in the GEOPHYS 385 series, or equivalent series in other departments with approval of the adviser and graduate coordinator. Students are encouraged to participate in the GEOPHYS 385 series from more than one faculty member or group and relevant equivalent series in other departments. Students with a master’s degree may waive up to 12 units for approved courses.

ENGR 202W Technical Writing, is recommended but not required.

The student’s record must indicate outstanding scholarship, and deficiencies in previous training must be removed. Experience as a teaching assistant (quarter-time for at least two academic quarters) is required for the Ph.D. degree. For more information, see the Geophysics Administrative Guide, section 1.4.1.

The student must pass the departmental oral examination by the end of the sixth academic quarter (third academic quarter for students with an M.S. degree); prepare under faculty supervision a dissertation that is a contribution to knowledge and the result of independent work expressed in satisfactory form; and pass the University oral examination.

The Ph.D. dissertation must be submitted in its final form within five calendar years from the date of admission to candidacy. Upon formal acceptance into a research group, the student and faculty adviser form a supervising committee consisting of at least three members who are responsible for overseeing satisfactory progress toward the Ph.D. degree. At least two committee members must be Geophysics faculty members. The committee conducts the department oral examination, and meets thereafter annually with the student to review degree progress. The Geophysics faculty monitors progress of all students who have not yet passed their department oral examination by carrying out an annual performance appraisal at a closed faculty meeting.

**Course requirements**

1. Geophysics: 12 units, lecture courses numbered 200 and above, from 4 different Geophysics faculty with different research specializations. These units cannot be waived.

2. Additional Geophysics: 3 units, lecture courses numbered 150 and above

3. School of Earth Sciences (non-Geophysics): 3 units, lecture courses numbered 100 or above

4. Mathematics (numbered 100 or above), Science, and Engineering (non-School of Earth Sciences): 6 units, lecture courses numbered 200 or above

5. Any of the above categories: 6 units, lecture courses numbered 200 or above

6. Total required units: 30 units.

**Ph.D. Department Examination Requirement**

1. One research proposal (10-20 pages) with a completed component that outlines a plan of research for 2 - 3 years

2. Second scientific proposal or paper (4-10 pages) with a professor in another area

3. An oral presentation with the student’s advising committee on both the research proposal (~30-40 min) and the second proposal/paper (~10 min), with questions by the committee constituting the qualifying exam.

**Second Project**

The purpose of the second research project is to add breadth to Ph.D. study and give the student the opportunity, ability and confidence to carry out research in multiple areas.

**Description/Scope:**

The second project should stand alone as a separate piece of work from the primary research project.

- The second project must be in Geophysics or a closely related discipline
- The topic must be substantially different from the topic of the Ph.D. thesis; i.e., it should not be the same method applied to a different problem, or a different method applied to the same problem.
- The second project should be supervised by a Stanford Geophysics faculty member (Academic Council or research faculty) who does not serve as the primary research adviser, and who must be in a separate research group. Exceptions allowing for second project advisers who are not Stanford Geophysics faculty must be approved by both the research adviser and the Director of Graduate Studies.
- Completion of the second project ideally results in a publication in the refereed literature, or a presentation at a scientific conference.
- Most students are expected to complete the second research project as part of their Ph.D. studies. However, the department allows an option of meeting academic breadth requirements through...
additional focused course work; see the Geophysics (https://pangea.stanford.edu/departments/geophysics/academics/graduate-program/graduation-requirements) web site for further information on program requirements and the coursework breadth option.

Chair: Howard Zebker

Associate Chair: Biondo Biondi

Professors: Greg Beroza, Biondo Biondi, Jerry M. Harris, Simon Klemperer, Rosemary J. Knight, Paul Segall, Norman H. Sleep, Howard Zebker,* Mark D. Zoback

Associate Professor: Eric Dunham

Assistant Professors: Tiziana Vanorio, Jenny Suckale, Dustin Schroeder

Professor (Research): Gerald M. Mavko, William Ellsworth

Emeriti: Jon Claerbout, Robert Kovach, Amos Nur,

Courtesy Professors: Stephan A. Graham, Wendy Mao, David D. Pollard

* Joint appointment with Electrical Engineering

** Joint appointment with Energy Resources Engineering
SUSTAINABILITY SCIENCE AND PRACTICE

Courses offered by the Sustainability Science and Practice program are listed under the subject code SUST on the Stanford Bulletin’s ExploreCourses (https://explorecourses.stanford.edu) website.

Mission of the Coterminal Program in Sustainability Science and Practice.

The Sustainability Science and Practice program is an interdisciplinary program hosted by the School of Earth, Energy and Environmental Sciences (p. 138). As the global human population climbs toward 11 billion this century and consumption demands increase, we must find ways to meet the needs of people in ways that do not forgo possibilities for future generations. These sustainability challenges are marked by extreme complexity, urgency, conflicting demands, and often a paucity of resources or political will to address them.

The program integrates theoretical and conceptual knowledge with practical skills and tools to prepare students to both envision a prosperous future for all, and know how to design the practices and cultivate partnerships essential to building that future.

The curriculum covers three main elements:

Understanding complex social-environmental systems

Students explore tools to measure, map, and model five capital assets – social, natural, human, manufactured, and knowledge capital – and their complex interactions in order to recognize potential feedbacks, thresholds, and unintended interactions and outcomes, as well as to identify leverage points and opportunities for interventions that can have transformative impact.

Understanding decision making and developing strategies for change

Students examine the roles of diverse actors who influence change in social-environmental systems and explore strategies to align decision making and behavior with sustainability goals. They explore mindsets and attributes of transformative leaders and their organizations while building a range of skills, including decision making, the use of inclusive metrics and evaluation approaches, and communication approaches.

Designing innovations with impact at scale

Students learn a framework and methods of practice for innovation in the context of complex and systemic challenges, including systems thinking, social cognitive theory, behavioral economics, technology strategy, business model innovation, and system based theories of change, in order to generate creative interventions to bring about change.

In addition, students complete a 4 unit (120 hour) practicum placement which provides a hands-on experience working with a partner organization on a real-life challenge.

Learning Outcomes

The Sustainability Science and Practice program integrates theoretical and conceptual knowledge, mindsets and practical skills and tools to enable students to understand and manage complex systems, understand decision making and develop strategies for change, and develop partnerships and design innovations with potential for large scale impact.

The program prepares students to become effective participants and agents of change as individuals and within organizations across all sectors of society, contributing to the advancement of the goal of sustainability, i.e., the well-being of people around the world and across generations. Using a conceptual framework that connects human well-being with key underlying assets, students learn how social-environmental systems work, how decisions are and can be made to influence system dynamics in a way that supports sustainability goals, and how to engage with others to design new ways of managing these systems.

Coterminal Master’s Degrees in Sustainability Science and Practice

The Sustainability Science and Practice program offers current Stanford University undergraduates the opportunity to apply to a one-year coterminal master’s program. Sustainability Science and Practice offers both a coterminal Master of Arts (M.A.) and a coterminal Master of Science (M.S.) degree.

Application and Admission

Sustainability Science and Practice accepts applications in the Autumn, Winter, and Spring quarters. Application deadline is 11.59pm on the seventh Monday of the quarter. If the seventh Monday is an official University holiday, applications are due by 11.59pm on the seventh Tuesday of the quarter. Seniors intending to confer their degrees at the end of the Spring Quarter must apply by Winter Quarter deadline.

To apply, students should submit an online application. The application includes the following:

- The online Stanford coterminal application (https://www.applyweb.com/stanterm)
- A statement of purpose
- A resume
- A current Stanford unofficial transcript
- Two letters of recommendation, one of which must be from the master’s advisor (who must be an Academic Council member)
- Master’s program proposal (link): a list of proposed courses that fulfill degree requirements, signed by the master’s adviser.

Applications must be submitted no later than the quarter prior to the expected completion of the bachelor’s degree (and within quarterly application deadlines). An application fee is assessed by the Registrar’s Office for coterminal applications once students are matriculated into the program.

Students applying to the coterminal master’s program must have completed a minimum of 120 units towards graduation with a minimum overall Stanford GPA of 3.4.

All applicants must devise a program of study that shows a level of courses appropriate to the master’s level, as determined in consultation with the masters advisor and the Director of Sustainability Science and Practice.

The student has the option of receiving the bachelor’s degree after completing the degree’s requirements, or receiving the bachelors and masters degrees concurrently at the completion of the master’s program.

Students must submit a new application to change from the M.S to the M.A. in Sustainability Science and Practice, or from the M.A. to the M.S. in Sustainability Science and Practice. If accepted, the student must submit a Graduate Authorization Petition through Axess; a $125 fee applies to a successful Graduate Authorization Petition.

University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the
"Coterminal Master’s Program (p. 46)” section. University requirements for the master's degree are described in the "Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

### Master of Arts in Sustainability Science and Practice

#### Degree Requirements

The following are required of all M.A. students:

- A minimum of 45 units of course work.
- At least 34 units of the student’s course work for the master’s program must be at the 200 level or above.
- All remaining coursework must be at the 100 level or above.
- All courses for the master’s program must be taken for a letter grade; courses not taken for a letter grade must be approved by the master’s adviser and the Director of Sustainability Science and Practice.
- A minimum overall GPA of 3.4 must be maintained.
- 25 or more of the 45 units must be designated as arts units. Course coding can be seen in the master list of courses, available here.

For the Master of Arts in Sustainability Science and Practice, an ethics course must be taken if not completed in the undergraduate degree program. This course does not have to be completed before applying to the coterm program. The ethics course may count it towards the degree. Students who did not take the undergraduate offering of this course may count it towards the degree. Students who did not take the undergraduate offering must enroll in the graduate (200-level) offering.

#### Required Courses

### Master of Science in Sustainability Science and Practice

#### Degree Requirements

The following are required of all M.A. students:

- A minimum of 45 units of course work.
- At least 34 units of the student’s course work for the masters program must be at the 200 level or above.
- All remaining coursework must be at the 100 level or above.
- All courses for the master’s program must be taken for a letter grade; courses not taken for a letter grade must be approved by the master’s adviser and Director of Sustainability Science and Practice.
- A minimum overall GPA of 3.4 must be maintained.
- Twenty five or more of the 45 units must be designated as ‘science’ units. Course coding can be seen in the master list of courses, available here.

For the Master of Arts in Sustainability Science and Practice, the following courses must be taken if not completed in the undergraduate degree program. These courses do not have to be completed before applying to the coterm program. The ethics course can be taken as an elective. The Math and Stats courses may not be counted as part of the 45-unit masters degree.

**Affiliated Faculty and Lecturers:**

- Kevin Arrig (Donald & Donald M. Steel Professor in Earth Sciences; Victoria and Roger Sant Director, Earth Systems Program)
- Nicole Ardo (Associate Professor of Education and Senior Fellow at the Woods Institute for the Environment)
- Shilajeet Banerjee (Professor of Practice, Emmett Interdisciplinary Program in Environment and Resources)
- William Barnett (Thomas M. Siebel Professor In Business Leadership, Strategy, & Organizations)
- Sally Benson (Director, Precourt Institute for Energy and Professor of Energy Resources Engineering and Senior Fellow at The Precourt Institute For Energy)
- Paul Brest (University Faculty Law Teaching Professor Emeritus)
- Marshall Burke (Assistant Professor of Earth System Science and Center Fellow at the Freeman Spogli Institute for International Studies and, by courtesy, at the Woods Institute for the Environment)
- Gretchen C. Daily (Bing Professor in Environmental Science and Senior Fellow the Woods Institute for the Environment)
- Jenna Davis (Associate Professor of Civil and Environmental Engineering and Senior Fellow the Woods Institute for the Environment)
- Rob Dunbar (W.M. Keck Professor in the School of Earth, Energy & Environmental Sciences and Senior Fellow, by courtesy, at the Woods Institute for the Environment)
- Zephyr Frank (Professor of History and, by courtesy, Iberian and Latin American Cultures)
- Pamela Hinds (Professor of Management Science and Engineering)
- Rob Jackson (Michelle and Kevin Douglas Provostial Professor and Senior Fellow at the Woods Institute for the Environment and at The Precourt Institute for Energy)
- James Holland Jones (Associate Professor of Earth System Science and Senior Fellow at the Woods Institute for the Environment)
- Jeffrey R. Koseff (William Alden Campbell and Martha Campbell Professor in the School of Engineering and Senior Fellow at the Woods Institute for the Environment)
- Eric Lambin (George and Setsuko Ishiyama Provostial Professor and Senior Fellow at the Woods Institute for the Environment)
- Hazel Markus (Davis-Brack Professor in the Behavioral Sciences)
- Pamela Matson (Chester Naramore Dean of the School of Earth, Energy & Environmental Sciences, Richard and Rhoda Goldman Professor in Environmental Studies and Senior Fellow at the Woods Institute)
- Rosamond Naylor (William Wrigley Professor, Senior Fellow at the Woods Institute for the Environment and at the Freeman Spogli Institute for International Studies and Professor, by courtesy, of Economics)
- Julia Novy-Hildesley (Professor of the Practice, Emmett Interdisciplinary Program in Environment and Resources)
- Burke Robinson (Lecturer, Management Science and Engineering)
- Jenny Suckale (Assistant Professor of Geophysics and, by courtesy, of Civil and Environmental Engineering)
- Barton Thompson (Robert E. Paradise Professor in Natural Resources Law and Senior Fellow at the Woods Institute for the Environment)
- Peter Vitousek (Clifford G. Morrison Professor in Population and Resource Studies, Senior Fellow at the Woods Institute for the Environment and Professor, by courtesy, of Earth System Science)
- Jeremy Weinstein (Professor of Political Science and Senior Fellow at The Freeman Spogli Institute for International Studies)
- Mikael Wolfe (Assistant Professor of History)
GRADUATE SCHOOL OF EDUCATION

Courses offered by the Graduate School of Education are listed under the subject code EDUC on the Stanford Bulletin’s ExploreCourses website.

The Stanford Graduate School of Education is a leader in pioneering new and better ways to achieve high-quality education for all. Faculty and students engage in groundbreaking and creative interdisciplinary scholarship that informs how people learn and shapes the practice and understanding of education. Through state-of-the-art research and innovative partnerships with educators worldwide, the school develops knowledge, wisdom, and imagination in its diverse and talented students so they can lead efforts to improve education around the globe.

Two graduate degrees with specialization in education are granted by the University: Master of Arts and Doctor of Philosophy.

While no undergraduate majors are offered, the school offers courses for undergraduates, an undergraduate minor and an undergraduate honors program.

The Graduate School of Education is organized into three area committees: Curriculum Studies and Teacher Education (CTE); Developmental and Psychological Sciences (DAPS); and Social Sciences, Humanities, and Interdisciplinary Policy Studies in Education (SHIPS).

In addition, several cross-area programs are sponsored by faculty from more than one area. These programs include the doctoral program in Learning Sciences and Technology Design (LSTD); the doctoral program in Race, Inequality, and Language in Education (RILE); two master’s level programs, the Stanford Teacher Education Program (STEP) and the Learning, Design, and Technology Program (LDT); and the undergraduate honors and minor programs.

These area committees function as administrative units that act on admissions, plan course offerings, assign advisers, monitor student academic progress, and determine program requirements. Various concentrations exist within most of these areas. Faculty members are affiliated primarily with one area but may participate in several programs. While there is a great deal of overlap and interdisciplinary emphasis across areas and programs, students are affiliated with one area committee or program and must meet its degree requirements.

Detailed information about admission and degree requirements, faculty members, and specializations related to these area committees and programs can be found in the Academics section of the School’s website (https://ed.stanford.edu/academics).

The Graduate School of Education offers no correspondence or programs. While there is a great deal of overlap and interdisciplinary emphasis across areas and programs, students are affiliated with one area committee or program and must meet its degree requirements.

The Honors Program in Education is available to undergraduates to supplement their declared majors by applying their studies to a research project inspired by their interests in education. This program enables qualified undergraduates at Stanford to extend the training in their major field of study by pursuing education courses and undertaking a supervised research thesis involving the study of education. Students typically apply for entry during either the Autumn or Winter Quarter of their junior year. Application information can be found at the Graduate School of Education (https://ed.stanford.edu/undergraduate/honors) website. The current director of the honors program is John Willinsky, Khosla Family Professor of Education.

In addition to completing an honors thesis over the course of their senior year, successful candidates for honors present brief reports on their research at a mini-conference held in the Spring Quarter that all the honors students in Education, as well as other members of the academic community, are invited to attend.

Required Coursework:

1. Students are required to enroll in the Undergraduate Honors Seminar during their senior year: EDUC 199A (Autumn, 3 units), EDUC 199B (Winter, 1 unit), and EDUC 199C (Spring, 1 unit)
2. Students are required to enroll in Honors Research (EDUC 140) with their adviser during Winter and Spring quarters of their senior year. The number of units is to be determined in consultation with the faculty adviser.
3. Students must also complete a minimum of 3 courses taken for a minimum of 3 units each in Education (EDUC units) before the end of their senior year. All courses must be taken for a letter grade and must be approved by the honors director.

Minor in Education (Undergraduate)

The Graduate School of Education awards an undergraduate minor in the field of Education. The minor is structured to provide a substantial introduction to Education through a broad-based and focused study of research, theory and practice. The goals of the minor are to allow
undergraduates to develop an understanding of the core issues facing educators and policymakers, to make connections to their major programs of study, and to provide rigorous preparation for graduate studies in Education.

Students interested in pursuing an undergraduate minor in Education begin by contacting the minor director (Jennifer Lynn Wolf, jlwolf@stanford.edu), who is responsible for advising all candidates and approving each student’s minor plan of study. Applications for the minor are due no later than the second quarter of the junior year.

The Education minor requires three core courses to ensure coverage of the field disciplines, while offering flexibility for students pursuing specific interests. In order to graduate with a minor in Education, undergraduates must complete the minor program of study as described here, for a total of not less than 20 units and not more than 30 units, with a minimum of six courses.

**Course Requirements and Distribution**

1. All minor students are required to take the minor core course:

   **EDUC 101**  Introduction to Teaching and Learning  4

2. All students are also required to take two of the following foundational courses:

   **EDUC 103B**  Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices  3-5
   **EDUC 110**  Sociology of Education: The Social Organization of Schools  4
   **EDUC 120C**  Education and Society  4-5
   **EDUC 201**  History of Education in the United States  3-5
   **EDUC 204**  Introduction to Philosophy of Education  3

3. Each student identifies a subfield of study in which to take at least three elective courses. Established subfields of study within the Graduate School of Education include: Teaching and Learning; Education Research and Policy; and Educational Technology. A comprehensive list of suitable elective courses is provided below.

   **1. Subfield 1: Teaching and Learning—**

   **EDUC 111**  The Young Adult Novel: A Literature For and About Adolescents  4
   **EDUC 112**  Urban Education  3-5
   **EDUC 130**  Introduction to Counseling  3
   **EDUC 148**  Critical Perspectives on Teaching and Tutoring English Language Learners  3
   **EDUC 149**  Theory and Issues in the Study of Bilingualism  3-5
   **EDUC 165**  History of Higher Education in the U.S.  3-5
   **EDUC 171**  Preschool Counts: Engaging Young Children in Math  3
   **EDUC 213**  Introduction to Teaching  3-4
   **EDUC 217**  Free Speech, Academic Freedom, and Democracy  3
   **EDUC 218**  Topics in Cognition and Learning: Technology and Multitasking  3
   **EDUC 241**  Race, Justice, and Integration  3
   **EDUC 245**  Understanding Racial and Ethnic Identity Development  3-5
   **EDUC 256**  Psychological and Educational Resilience Among Children and Youth  4
   **EDUC 266**  Educational Neuroscience  3

   **2. Subfield 2: Education Research and Policy—**

   **EDUC 111**  The Young Adult Novel: A Literature For and About Adolescents  4
   **EDUC 114N**  Growing Up Bilingual  3
   **EDUC 116N**  Howard Zinn and the Quest for Historical Truth  3
   **EDUC 117**  Research and Policy on Postsecondary Access  3
   **EDUC 122Q**  Democracy in Crisis: Learning from the Past  3
   **EDUC 123**  Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms  3-5
   **EDUC 145**  Writing Across Languages and Cultures: Research in Writing and Writing Instruction  3-5

   **Units**  
   **EDUC 149**  Theory and Issues in the Study of Bilingualism  3-5
   **EDUC 151**  The Future of Information  4
   **EDUC 165**  History of Higher Education in the U.S.  3-5
   **EDUC 177A**  Well-Being in Immigrant Children & Youth: A Service Learning Course  4

   **Units**  
   **EDUC 197**  Gender and Education in Global and Comparative Perspectives  4
   **EDUC 203**  Using International Test Results in Educational Research  4
   **EDUC 217**  Free Speech, Academic Freedom, and Democracy  3
   **EDUC 220D**  History of School Reform: Origins, Policies, Outcomes, and Explanations  3-5
   **EDUC 222**  Resource Allocation in Education  4-5
   **EDUC 241**  Race, Justice, and Integration  3
   **EDUC 245**  Understanding Racial and Ethnic Identity Development  3-5
   **EDUC 256**  Psychological and Educational Resilience Among Children and Youth  4
   **EDUC 266**  Educational Neuroscience  3

   **Units**  
   **EDUC 277**  Education of Immigrant Students: Psychological Perspectives  4
   **EDUC 280**  Learning & Teaching of Science  3
   **EDUC 328**  Theory and Practice of Environmental Education  3
   **EDUC 357**  Science and Environmental Education in Informal Contexts  3
   **EDUC 357**  Science and Environmental Education in Informal Contexts  3

4. Course work completed for the Education Minor must meet the following criteria:
   - All courses must be taken for a letter grade.
Coterminal Master's Program in Education

The Graduate School of Education admits a limited number of students from undergraduate departments within the University into a coterminal master's program. For information about the coterminal option through the Stanford Teacher Education Program (STEP), see the details under STEP (https://ed.stanford.edu/step). Students in a coterminal program receive the bachelor's degree in their undergraduate major and the master's degree in Education. Approval of the student’s undergraduate department and admission to the Graduate School of Education’s M.A. program are required. Undergraduates may apply when they have completed at least 120 units toward graduation (UTG). The number of units required for the M.A. degree depends on the program requirements; see the Master’s Handbook (https://ed.stanford.edu/academics/masters-handbook) for additional information.

Applicants may learn more about the GSE's coterminal application process from the Graduate School of Education’s (https://ed.stanford.edu/admissions/application-reqs) web site. All coterm programs accept online applications. Information regarding University rules about application and eligibility for coterm admission can be found on the Registrar’s web site (https://registrar.stanford.edu/students/coterm-degree-programs).

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 46)" section. University requirements for the master’s degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Master of Arts in Education

The M.A. degree is conferred upon fulfillment of degree requirements and by recommendation of the faculty of the Graduate School of Education. Depending on the specialization (please see below), students must complete a minimum of 45-48 units at Stanford, and 27-36 units in the Graduate School of Education (EDUC units) to receive a master’s degree in Education. All M.A. students must maintain a grade point average (GPA) of 3.0 or better in courses applicable to the degree. Master's students should obtain detailed program requirements from the Master’s Handbook (https://ed.stanford.edu/academics/masters-handbook).

Additional detailed information regarding program content and degree requirements is available on the Graduate School of Education’s (https://ed.stanford.edu/admissions/application-reqs) website.

The Graduate School of Education offers Master of Arts degrees in the following specializations:

- Curriculum and Teacher Education (CTE) (This is not a credentialing program; see STEP below.)
- International Comparative Education (ICE)
- International Education Policy Analysis (IEPA)
- Joint Degree with Graduate School of Business (M.A./M.B.A.)
- Joint Degree with Law School (M.A./J.D.)
- Joint Degree with Public Policy Program (M.A./M.P.P.)
- Learning, Design, and Technology (LDT)
- Policy, Organization, and Leadership Studies (POLS)

In addition, an M.A. degree with a teaching credential is offered in the Stanford Teacher Education Program.

Stanford Teacher Education Program (STEP)

STEP is a 12-month, full-time program leading to a Master of Arts and a preliminary California teaching credential. STEP offers a Master of Arts in Education that prepares program graduates for careers as teachers in single or multiple subject classrooms. STEP Elementary prepares students to become teachers in multiple subject classrooms. STEP Secondary prepares students to become teachers of English, World Languages (French, German, Japanese, Mandarin, Spanish), Mathematics, Science (biology, chemistry, earth science, physics), and History/Social Science. STEP seeks to prepare and support teacher candidates to work with diverse learners to achieve high intellectual, academic, and social standards by creating equitable and successful schools and classrooms.

The 12-month STEP year begins in June with a summer quarter of intensive academic preparation and placement in a local summer school. During the academic year, students continue their course work and begin year-long field placements under the guidance of expert teachers in local schools. The Master of Arts and teaching credential require a minimum of 45 quarter units, taken during four quarters of continuous residency.

Stanford undergraduates who enroll in STEP through the coterminal program must complete their undergraduate coursework and have their bachelor's degree conferred prior to beginning in the STEP year. Coterminal STEP students graduate with a Master of Arts in Education and a recommendation for a preliminary California teaching credential.

Applicants to STEP Elementary are required to meet the basic skills requirement by one of the following methods: pass the California Basic Educational Skills Test (CBEST), an approved out of state basic skills exam, the CSET: Writing Skills or achieve qualifying scores on the SAT, ACT or AP examinations. Applicants must also pass the California Multiple Subject Examination for Teachers (CSET), and the Reading Instruction Competence Assessment Test (RICA).

Applicants to STEP Secondary are required to meet the basic skills requirement by one of the following methods: pass the California Basic Educational Skills Test (CBEST), an approved out of state basic skills exam, or achieve qualifying scores on the SAT, ACT or AP examinations. Additionally, applicants must demonstrate subject matter competence in one of two ways:

1. by passing the California Subject Examination for Teachers (CSET) in their content area; or
2. by completing a California state-approved subject matter preparation program.
Further information regarding admission requirements, course work, and credential requirements is available at the Stanford Teacher Education Program website. (https://gse-step.stanford.edu)

Doctoral Degrees in Education

The Graduate School of Education offers the Doctor of Philosophy (Ph.D.) degree in all program area committees. The degree is conferred by the University upon recommendation by the faculty of the Graduate School of Education and the University Committee on Graduate Studies. The Ph.D. requires a minimum of 135 units of course work and research completed at Stanford beyond the baccalaureate degree. Students may transfer up to 45 units of graduate course work. Students must consult with the doctoral programs officer if they intend to transfer prior course work. Students must maintain a grade point average (GPA) of 3.0 (B) or better in courses applicable to the degree.

Students should note that admission to the doctoral program does not constitute admission to candidacy for the degree. Students must qualify and apply for candidacy by the end of their second year of study and should obtain information about procedures and requirements during their first year from the doctoral programs officer in Cubberley 135.

The Ph.D. degree is designed for students who are preparing for research work in public school systems, branches of government, or specialized institutions; teaching roles in education in colleges or universities, and research connected with such teaching; or other careers in educational scholarship and research.

Ph.D. students must complete a minor in another discipline taught outside the school, or hold an acceptable master’s degree outside the field of education, or complete an approved individually designed distributed minor that combines relevant advanced work taken in several disciplines outside the school.

Upon admission, the admitting area committee assigns an initial adviser from its faculty who works with the student to establish an appropriate and individualized course of study, a relevant minor, and project research plans. Other faculty members may also be consulted in this process. Details about administrative and academic requirements for each area committee and the Graduate School of Education, along with the expected time frame to complete program milestones, are given in the publication Graduate School of Education Doctoral Degree Handbook, available for download at http://ed.stanford.edu/academics/doctoral-handbook.

The following doctoral specializations, with their sponsoring area and concentration, are offered:

- Anthropology of Education (SHIPS)
- Developmental and Psychological Sciences (DAPS)
- Economics of Education (SHIPS)
- Educational Linguistics (SHIPS)
- Educational Policy (SHIPS)
- Elementary Education (CTE)
- Higher Education (SHIPS)
- History/Social Science Education (CTE)
- History of Education (SHIPS)
- International Comparative Education (SHIPS)
- Learning Sciences and Technology Design (CTE, DAPS, SHIPS)
- Literacy, Language, and English Education (CTE)
- Mathematics Education (CTE)
- Organizational Studies (SHIPS)
- Philosophy of Education (SHIPS)
- Race, Inequality, and Language in Education (CTE, DAPS, SHIPS)
- Science Education (CTE)
- Sociology of Education (SHIPS)
- Teacher Education (CTE)

Ph.D. Minor in Education

Candidates for the Ph.D. degree in other departments or schools of the University may elect to minor in Education. Requirements include a minimum of 20 quarter units of graduate course work in Education and a field of concentration. Students choosing to minor in Education should meet with the Associate Dean for Student Affairs to determine a suitable course of study early in their program.

Dean: Dan Schwartz

Associate Dean for Faculty Affairs: Tom Dee
Associate Dean for Student Affairs: Bryan Brown
Senior Associate Dean for Administration: Geoff Cox
Associate Dean for External Relations: Heather Trippel
Assistant Dean for Academic Services: Shu-Ling Chen
Associate Dean for Administration: Priscilla Fiden
Assistant Dean for Information Technology and CTO: Paul Kim

Professors: Ametha Ball, Adam J. Banks, Brigid J. Barron, Jo Boaler, Hilda Borko, Eamonn Callan, Martin Carney, Geoffrey Cohen, William Damon, Tom Dee, Claude Goldenberg, Patricia J. Gumpert, David F. Labaree, Teresa D. LaFromboise, Susanna Loeb, Bruce D. McCandliss, Raymond P. McDermott, Daniel A. McFarland, Jonathan Osborne, Amado M. Padilla, Roy Pea, Walter Powell, Francisco O. Ramirez, Sean Reardon, Daniel Schwartz, Guillermo Solano-Flores, Deborah J. Stipek, Guadalupe Valdés, Carl Wieman, John Willinsky, Sam Wineburg

Associate Professors: Anthony L. Antonio, Nicole M. Ardoin, Eric Bettinger, Bryan Brown, Ari Y. Kelman, Jelena Obradović, David Rogosa, Maria Araceli Ruiz-Primo, Mitchell Stevens
Assistant Professors: Maren Songmy Aukerman, Paulo Blikstein, Patricia Bromley, Benjamin Domingue, Antero Garcia, Leah Gordon, Jennifer Langer-Osuna, Sarah R. Levine, Ramón Antonio Martinez, Jonathan Rosa, Candace Thille

Professors (Teaching): Shelley Goldman
Associate Professors (Teaching): David Brazer, Ira Lit, Peter Williamson, Christine Min Wotipka
Professor (Research): David Plank
Associate Professor (Research): Janet Carlson
Assistant Professor (Research): Michelle Reininger, Prashant Loyalka

Courtesy Professors: Jeremy Bailenson, Richard Banks, Stephen Barley, Albert Camarillo, Carol Dweck, Eric Hanushek, John C. Mitchell, Terry Moe, Brad Osgood, Byron Reeves, Robert Reich, John Rickford, Cecilia Ridgeway, Caroline Winterer

Courtesy Associate Professors (Teaching): Shashank Joshi
Courtesy Professor (Teaching): Don Barr, William Koski

Senior Lecturers: Gay Hoagland, Denise Pope, Ann Porteus, Jennifer Wolf
SCHOOL OF ENGINEERING

Courses offered by the School of Engineering are listed under the subject code ENGR on the Stanford Bulletin’s ExploreCourses web site.

The School of Engineering offers undergraduate programs leading to the degree of Bachelor of Science (B.S.), programs leading to both B.S. and Master of Science (M.S.) degrees, other programs leading to a B.S. with a Bachelor of Arts (B.A.) in a field of the humanities or social sciences, dual-degree programs with certain other colleges, and graduate curricula leading to the degrees of M.S., Engineer, and Ph.D.

The school has nine academic departments: Aeronautics and Astronautics, Bioengineering, Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Management Science and Engineering, Materials Science and Engineering, and Mechanical Engineering. These departments and one interdisciplinary program, the Institute for Computational and Mathematical Engineering, are responsible for graduate curricula, research activities, and the departmental components of the undergraduate curricula.

In research where faculty interest and competence embrace both engineering and the supporting sciences, there are numerous interdisciplinary research centers and programs within the school as well as several interschool activities, including the Army High Performance Computing Research Center, Biomedical Informatics Training Program, Center for Integrated Systems, Center for Work, Technology, and Organization, Collaboratory for Research on Global Projects, National Center for Physics-Based Simulation in Biology, Center for Position, Navigation, and Time, the Energy Modeling Forum, the NIH Biotechnology Graduate Training Grant in Chemical Engineering, and the Stanford Technology Ventures Program. Energy Resources Engineering (formerly Petroleum Engineering) is offered through the School of Earth, Energy, and Environmental Sciences.

The School of Engineering’s Hasso Plattner Institute of Design (also known as “the d.school,” http://dschool.stanford.edu) brings together students and faculty in engineering, business, education, medicine, and the humanities to learn design thinking and work together to solve big problems in a human-centered way.

The Woods Institute for the Environment (http://environment.stanford.edu) brings together faculty, staff, and students from the schools, institutes and centers at Stanford to conduct interdisciplinary research, education, and outreach to promote an environmentally sound and sustainable world.

The Global Engineering Program (https://engineering.stanford.edu/students/global-engineering-programs/) offers a portfolio of international opportunities for Stanford undergraduate and graduate students majoring within the School of Engineering. Opportunities range from service learning programs to internships to study tours. These opportunities enhance engineering education by providing students with an opportunity to learn about technology and engineering globally, to build professional networks, and to gain real world experience in a culturally diverse and international environment. For more information and application deadlines, please see gep.stanford.edu

Instruction in Engineering is offered primarily during Autumn, Winter, and Spring quarters of the regular academic year. During the Summer Quarter, a small number of undergraduate and graduate courses are offered.

Undergraduate Programs in the School of Engineering

The principal goals of the undergraduate engineering curriculum are to provide opportunities for intellectual growth in the context of an engineering discipline, for the attainment of professional competence, and for the development of a sense of the social context of technology. The curriculum is flexible, with many decisions on individual courses left to the student and the adviser. For a student with well-defined educational goals, there is often a great deal of latitude.

In addition to the special requirements for engineering majors described below, all undergraduate engineering students are subject to the University general education, writing, and foreign language requirements outlined in the first pages of this bulletin. Depending on the program chosen, students have the equivalent of from one to three quarters of free electives to bring the total number of units to 180.

The School of Engineering’s Handbook for Undergraduate Engineering Programs is the definitive reference for all undergraduate engineering programs. It is available online at http://ughb.stanford.edu and provides detailed descriptions of all undergraduate programs in the school, as well as additional information about extracurricular programs and services. Because it is revised in the summer, and updates are made to the web site on a continuing basis, the handbook reflects the most up-to-date information on School of Engineering programs for the academic year.

Accreditation

The Accreditation Board for Engineering and Technology (ABET) accredits college engineering programs nationwide using criteria and standards developed and accepted by U.S. engineering communities. At Stanford, the following undergraduate programs are accredited:

• Chemical Engineering
• Civil Engineering
• Mechanical Engineering

In ABET-accredited programs, students must meet specific requirements for engineering science, engineering design, mathematics, and science course work. Students are urged to consult the School of Engineering Handbook for Undergraduate Engineering Programs and their adviser.

Accreditation is important in certain areas of the engineering profession; students wishing more information about accreditation should consult their department office or the office of the Senior Associate Dean for Student Affairs in 135 Huang Engineering Center.

Policy on Satisfactory/No Credit Grading and Minimum Grade Point Average

All courses taken to satisfy major requirements (including the requirements for mathematics, science, engineering fundamentals, Technology in Society, and engineering depth) for all engineering students (including both department and School of Engineering majors) must be taken for a letter grade if the instructor offers that option.

For departmental majors, the minimum combined GPA (grade point average) for all courses taken in fulfillment of the Engineering Fundamentals requirement and the Engineering Depth requirement is 2.0. For School of Engineering majors, the minimum GPA on all engineering courses taken in fulfillment of the major requirements is 2.0.

Admission

Any students admitted to the University may declare an engineering major if they elect to do so; no additional courses or examinations are required for admission to the School of Engineering.

Recommended Preparation

Freshman

Students who plan to enter Stanford as freshmen and intend to major in engineering should take the highest level of mathematics offered in high school. (See the “AP Credit (p. 36)” section of this bulletin for information on advanced placement in mathematics.) High school courses in physics
and chemistry are strongly recommended, but not required. Additional elective course work in the humanities and social sciences is also recommended.

**Transfer Students**

Students who do the early part of their college work elsewhere and then transfer to Stanford to complete their engineering programs should follow an engineering or pre-engineering program at the first school, selecting insofar as possible courses applicable to the requirements of the School of Engineering, that is, courses comparable to those mentioned under the Majors tab. In addition, students should work toward completing the equivalent of Stanford's foreign language requirement and as many of the University’s General Education Requirements (GERs) as possible before transferring. Some transfer students may require more than four years (in total) to obtain the B.S. degree. However, Stanford affords great flexibility in planning and scheduling individual programs, which makes it possible for transfer students, who have wide variations in preparation, to plan full programs for each quarter and to progress toward graduation without undue delay.

Transfer credit is given for courses taken elsewhere whenever the courses are equivalent or substantially similar to Stanford courses in scope and rigor. The policy of the School of Engineering is to study each transfer student’s preparation and make a reasonable evaluation of the courses taken prior to transfer by means of a petition process. Inquiries may be addressed to the Office of Student Affairs in 135 Huang Engineering Center. For more information, see the transfer credit section of the Handbook for Undergraduate Engineering Programs at http://ughb.stanford.edu.

**Degree Program Options**

In addition to the B.S. degrees offered by departments, the School of Engineering offers two other types of B.S. degrees:

- Bachelor of Science in Engineering (see subplan majors listed below)
- Bachelor of Science for Individually Designed Majors in Engineering (IDMEN)

There are six Engineering B.S. subplans that have been proposed by cognizant faculty groups and approved by the Undergraduate Council:

- Architectural Design
- Atmospheric/Energy
- Biomedical Engineering
- Biomedical Computation
- Engineering Physics
- Product Design

The B.S. for an Individually Designed Major in Engineering has also been approved by the council.

Curricula for majors are offered by the departments of:

- Aeronautics and Astronautics
- Bioengineering
- Chemical Engineering
- Civil and Environmental Engineering
- Computer Science
- Electrical Engineering
- Management Science and Engineering
- Materials Science and Engineering
- Mechanical Engineering

Curricula for majors in these departments have the following components:

- 36–45 units of mathematics and science (see Basic Requirements 1 and 2 at the end of this section)
- Engineering fundamentals (two-three courses minimum, depending up individual program requirements; see Basic Requirement 3)
- Technology in Society (TIS) (one course minimum, see Basic Requirement 4)
- Engineering depth (courses such that the total number of units for Engineering Fundamentals and Engineering Depth is between 60 and 72)
- ABET accredited majors must meet a minimum number of Engineering Science and Engineering Design units; (see Basic Requirement 5)

Consult the 2017-18 Handbook for Undergraduate Engineering Programs (http://ughb.stanford.edu) for additional information.

**Dual and Coterminal Programs**

A Stanford undergraduate may work simultaneously toward two bachelor’s degrees or toward a bachelor’s and a master’s degree, that is, B.A. and M.S., B.A. and M.A., B.S. and M.S., or B.S. and M.A. The degrees may be granted simultaneously or at the conclusion of different quarters. Five years are usually required for a dual or coterminal program or for a combination of these two multiple degree programs. For further information, inquire with the School of Engineering’s student affairs office, 135 Huang Engineering Center, or with department contacts listed in the Handbook for Undergraduate Engineering Programs, available at http://ughb.stanford.edu.

Dual B.A. and B.S. Degree Program—To qualify for both degrees, a student must:

1. complete the stated University and department requirements for each degree
2. complete 15 full-time quarters (3 full-time quarters after completing 180 units)
3. complete a total of 225 units (180 units for the first bachelor’s degree plus 45 units for the second bachelor’s degree)

Coterminal Bachelor’s and Master’s Degree Program—A Stanford undergraduate may be admitted to graduate study for the purpose of working simultaneously toward a bachelor’s degree and a master’s degree, in the same or different disciplines. To qualify for both degrees, a student must:

1. complete, in addition to the units required for the bachelor’s degree, the number of units required by the graduate department for the master’s degree which in no event is fewer than the University minimum of 45 units
2. complete the requirements for the bachelor’s degree (department, school, and University) and apply for conferral of the degree at the appropriate time
3. complete the department and University requirements for the master’s degree and apply for conferral of the degree at the appropriate time

A student may complete the bachelor’s degree before completing the master’s degree, or both degrees may be completed in the same quarter.

**Procedure for Applying for Admission to Coterminal Degree Programs**

Stanford undergraduates apply to the pertinent graduate department using the University coterminal application. Application deadlines and admissions criteria vary by department, but in all cases the student must apply early enough to allow a departmental decision at least one quarter in advance of the anticipated date of conferral of the bachelor’s degree.

Students interested in coterminal degree programs in Engineering should refer to our departments’ sections of this bulletin for more detailed
information. The University requirements for the coterminal master’s degree are described in the "Coterminal Master’s Degrees (http://exploredegrees.stanford.edu/cotermdegrees/#text)" section of this bulletin.

Graduate Programs in the School of Engineering

Admission
Application for admission with graduate standing in the school should be made to the graduate admissions committee in the appropriate department or program. While most graduate students have undergraduate preparation in an engineering curriculum, it is feasible to enter from other programs, including chemistry, geology, mathematics, or physics.

For further information and application instructions, see the department sections in this bulletin or http://gradadmissions.stanford.edu. Stanford undergraduates may also apply as coterminal students; details can be found under "Degree Program Options" in the "Undergraduate Programs in the School of Engineering (http://www.stanford.edu/dept/registrar/bulletin/5144.htm)" section of this bulletin.

Fellowships and Assistantships
Departments and divisions of the School of Engineering award graduate fellowships, research assistantships, and teaching assistantships each year.

Curricula in the School of Engineering
For further details about the following programs, see the department sections in this bulletin.

Related aspects of particular areas of graduate study are commonly covered in the offerings of several departments and divisions. Graduate students are encouraged, with the approval of their department advisers, to choose courses in departments other than their own to achieve a broader appreciation of their field of study. For example, most departments in the school offer courses concerned with nanoscience, and a student interested in an aspect of nanotechnology can often gain appreciable benefit from the related courses given by departments other than her or his own.

Departments and programs of the school offer graduate curricula as follows:

Aeronautics and Astronautics
- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Autonomy
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Decision Making under Uncertainty
- Direct and Large-Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Micro and Nano Systems and Materials
- Multidisciplinary Design Optimization
- Navigation Systems (especially GPS)
- Optimal Control, Estimation, System Identification
- Sensors for Harsh Environments
- Space Debris Characterization
- Space Environment Effects on Spacecraft
- Space Plasmas
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

Bioengineering
- Biomedical Computation
- Biomedical Devices
- Biomedical Imaging
- Cell and Molecular Engineering
- Regenerative Medicine

Chemical Engineering
- Applied Statistical Mechanics
- Biocatalysis
- Biochemical Engineering
- Bioengineering
- Biophysics
- Computational Materials Science
- Colloid Science
- Dynamics of Complex Fluids
- Energy Conversion
- Functional Genomics
- Hydrodynamic Stability
- Kinetics and Catalysis

### Bachelor of Science in the School of Engineering

Departments within the School of Engineering offer programs leading to the Bachelor of Science degree in the following fields:

- Aeronautics and Astronautics
- Bioengineering
- Chemical Engineering
- Civil Engineering
- Computer Science
- Electrical Engineering
- Environmental Systems Engineering
- Management Science and Engineering
- Materials Science and Engineering
- Mechanical Engineering

The School of Engineering itself offers interdisciplinary programs leading to the Bachelor of Science degree in Engineering with specializations in:

- Architectural Design
- Atmosphere/Energy
- Biomechanical Engineering
- Biomedical Computation
- Engineering Physics
- Product Design

In addition, students may elect a Bachelor of Science in an Individually Designed Major in Engineering.

### Bachelor of Arts and Science (B.A.S.) in the School of Engineering

This degree is available to students who complete both the requirements for a B.S. degree in engineering and the requirements for a major or program ordinarily leading to the B.A. degree. For more information, see the "Undergraduate Degrees (p. 29)" section of this bulletin.

### Independent Study, Research, and Honors

The departments of Aeronautics and Astronautics, Bioengineering, Chemical Engineering, Civil and Environmental Engineering, Computer Science, Electrical Engineering, Materials Science and Engineering, and Mechanical Engineering, as well as the faculty overseeing the Architectural Design, Atmosphere/Energy, Biomechanical Engineering, Biomedical Computation, and Engineering Physics majors, offer qualified students opportunities to do independent study and research at an advanced level with a faculty mentor in order to receive a Bachelor of Science with honors. An honors option is also available to students pursuing an independently designed major, with the guidance and approval of their adviser.

### Petroleum Engineering

Petroleum Engineering is offered by the Department of Energy Resource Engineering in the School of Earth, Energy, and Environmental Sciences. Consult the "Energy Resources Engineering (p. 170)" section of this bulletin for requirements. School of Engineering majors who anticipate summer jobs or career positions associated with the oil industry should consider enrolling in ENGR 120.

### Programs in Manufacturing

Programs in manufacturing are available at the undergraduate, master's, and doctorate levels. The undergraduate programs of the departments of Civil and Environmental Engineering, Management Science and Engineering, and Mechanical Engineering provide general preparation for any student interested in manufacturing. More specific interests can be accommodated through Individually Designed Majors in Engineering (IDMENs).

### Basic Requirements

#### Basic Requirement 1 (Mathematics)

Engineering students need a solid foundation in the calculus of continuous functions, linear algebra, an introduction to discrete mathematics, and an understanding of statistics and probability theory. Students are encouraged to select courses on these topics. To meet ABET accreditation criteria, a student's program must include the study of differential equations. Courses that satisfy the math requirement are listed at http://ughb.stanford.edu in the Handbook for Undergraduate Engineering Programs.

#### Basic Requirement 2 (Science)

A strong background in the basic concepts and principles of natural science in such fields as physics, chemistry, geology, and biology is essential for engineering. Most students include the study of physics and chemistry in their programs. Courses that satisfy the science requirement are listed at http://ughb.stanford.edu in the Handbook for Undergraduate Engineering Programs.

#### Basic Requirement 3 (Engineering Fundamentals)

The Engineering Fundamentals requirement is satisfied by a nucleus of technically rigorous introductory courses chosen from the various engineering disciplines. It is intended to serve several purposes. First,
it provides students with a breadth of knowledge concerning the major fields of endeavor within engineering. Second, it allows the incoming engineering student an opportunity to explore a number of courses before embarking on a specific academic major. Third, the individual classes each offer a reasonably deep insight into a contemporary technological subject for the interested non-engineer.

The requirement is met by taking two to three courses from the following list (the number depends upon the individual requirements of each major program):

<table>

1 Only one course from each numbered series can be used in the Engineering Fundamentals category within a major program.
2 ENGR 40M Making Stuff: What is EE and ENGR 50 Introduction to Materials Science, Nanotechnology Emphasis may be taken on video at some of Stanford’s Overseas Centers.

Basic Requirement 4 (Technology in Society)

It is important for the student to obtain a broad understanding of engineering as a social activity. To foster this aspect of intellectual and professional development, all engineering majors must take one course devoted to exploring issues arising from the interplay of engineering, technology, and society. Courses that fulfill this requirement are listed online at http://ughb.stanford.edu in the Handbook for Undergraduate Engineering Programs.

Basic Requirement 5 (Engineering Topics)

In order to satisfy ABET (Accreditation Board for Engineering and Technology) requirements, a student majoring in Chemical, Civil, or Mechanical Engineering must complete one and a half years of engineering topics, consisting of a minimum of 68 units of Engineering Fundamentals and Engineering Depth appropriate to the student’s field of study. In most cases, students meet this requirement by completing the major program core and elective requirements. A student may need to take additional courses in Depth in order to fulfill the minimum requirement. Appropriate courses assigned to fulfill each major’s program are listed online at http://ughb.stanford.edu in the Handbook for Undergraduate Engineering Programs.

Experimentation

Chemical Engineering, Civil Engineering, and Mechanical Engineering must include experimental experience appropriate to the discipline. Lab courses taken in the sciences, as well as experimental work taken in courses within the School of Engineering, will fulfill this requirement.

Overseas Studies Courses in Engineering

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

Aeronautics and Astronautics (AA)

Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments, and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, autonomous systems, computational engineering, embedded programming, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, autonomy, robotics, unmanned aerial vehicles, drones, space exploration, air and space-based telecommunication industries, computational engineering, teaching, research, military service, and other related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Aeronautics and Astronautics.

or MATH 52 Integral Calculus of Several Variables
CME 108 Introduction to Scientific Computing (recommended)

Science
20 units minimum

PHYSICS 41 Mechanics (required) 4
PHYSICS 43 Electricity and Magnetism (required) 4
PHYSICS 45 Light and Heat (required)
CHEM 31X Chemical Principles Accelerated (or CHEM 31A and CHEM 31B, or AP Chemistry) (required)
ENGR 80 Introduction to Bioengineering (Engineering Living Matter) (recommended)

School of Engineering approved Science Electives: See Undergraduate Handbook, Figure 4-2

Technology in Society (one course required)
School of Engineering approved Technology in Society courses: See Undergraduate Handbook, Figure 4-3. The course must be on the School of Engineering approved list the year you take it.
ENGR 131 Ethical Issues in Engineering (recommended)

Engineering Fundamentals (three courses required)
11 units minimum
ENGR 21 Engineering of Systems (required)
ENGR 70A/CS 106A Programming Methodology (required)
ENGR 10 Introduction to Engineering Analysis (recommended)
ENGR 40M An Intro to Making: What is EE (recommended)

Fundamentals Elective, see list of Approved Courses in Undergraduate Engineering Handbook website at ughb.stanford.edu, Figure 4-4

Aero/Astro Depth Requirements
27 units minimum
ENGR 14 Intro to Solid Mechanics (required)
ENGR 15 Dynamics (required)
ENGR 105 Feedback Control Design (required)
ME 30 Engineering Thermodynamics (required)
AA 100 Introduction to Aeronautics and Astronautics (required)

AA 101 Introduction to Aero Fluid Mechanics, required 1
AA 131 Space Flight, required 1
AA 141 (required)
AA 171 Autonomous Systems, required 1
AA 190 Directed Research and Writing in Aero/Astro 3-5

Aero/Astro Focus Electives
15 units minimum
AA 102 Introduction to Applied Aerodynamics 1
AA 103 Air and Space Propulsion 1
AA 111 Introduction to Aerospace Computational Engineering 1
AA 135 Introduction to Space Policy 1
AA 151 Lightweight Structures 1
AA 156 Mechanics and Composites 1
AA 173 Flight Mechanics and Controls 1
AA 175 Embedded Programming 1
AA 272C Global Positioning Systems 3
AA 279A Space Mechanics 3
AA 199 Independent Study in Aero/Astro 1-5
MS&E 178 The Spirit of Entrepreneurship 2

Aero/Astro Suggested Courses (not required)
AA 149 Operation of Aerospace Systems 1

Aero/Astro Capstone Requirement
7 units minimum
AA 123A Air Capstone I, satisfies the Writing in the Major requirement, (WIM) 1
AA 123B Air Capstone II 1
AA 124A Space Capstone I, satisfies the Writing in Major requirement, (WIM) 1
AA 124B Space Capstone II 1

For additional information and sample programs see the Handbook for Undergraduate Engineering (http://ughb.stanford.edu) and the Aeronautics and Astronautics Undergraduate Program Sheet (https://stanford.box.com/s/e61zom3k92zihqisyl89r82skeon0nm).

All courses taken for the major must be taken for a letter grade if that option is offered by the instructor.

Minimum Combined GPA for all courses in Engineering Topics (Engineering Fundamentals and Depth courses) is 2.0.

Transfer and AP credits in Math, Science, Fundamentals, and the Technology in Society course must be approved by the School of Engineering Dean's office.

1 This course will be offered in the near future. See the department's web site for more information about our future course offerings (https://aa.stanford.edu/academics/undergraduate-program).
2 A score of 4 on the Calculus BC test or 5 on the AB test only gives students 8 units, not 10 units, so is equal to MATH 19 + MATH 20, but not MATH 21. The Math Placement Exam determines what math course the student starts with.
3 It is recommended that the CME series (100, 102, 104) be taken rather than the MATH series (51, 52, 53). It is recommended that students taking the MATH series also take CME 192 Introduction to MATLAB.
4 A score of 4 or 5 on the AP Physics C Mechanics test places the student out of PHYSICS 41. Similarly, a 4 or 5 on the AP Physics Electricity and Magnetism test places the student out of PHYSICS 43.

Architectural Design (AD)

Completion of the undergraduate program in Architectural Design leads to the conferral of the Bachelor of Science in Engineering. The subplan "Architectural Design" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Architectural Design

The mission of the undergraduate program in Architectural Design is to develop students' ability to integrate engineering and architecture in ways that blend innovative architectural design with cutting-edge engineering technologies. Courses in the program combine hands-on architectural design studios with a wide variety of other courses. Students can choose from a broad mix of elective courses concerning energy conservation, sustainability, building systems, and structures, as well as design foundation and fine arts courses. In addition to preparing students for advanced studies in architecture and construction management, the program's math and science requirements prepare students well for...
graduate work in other fields such as civil and environmental engineering, law, and business.

Requirements

**Mathematics and Science (36 units minimum)**

**Mathematics**
- MATH 19: Calculus (3 units)
- MATH 20: Calculus (3 units)
- MATH 21: Calculus (4 units)
- Or 10 units AP Calculus or MATH 41 & MATH 42
- CME 100: Vector Calculus for Engineers (Recommended) (5 units)

One course in Statistics (required) 3-5 units

**Science**
- PHYSICS 41: Mechanics (4 units)

Recommended:
- EARTHSYS 101: Energy and the Environment
- EARTHSYS 102: Fundamentals of Renewable Power
- CEE 64: Air Pollution and Global Warming: History, Science, and Solutions
- CEE 70: Environmental Science and Technology
- PHYSICS 23: Electricity, Magnetism, and Optics
- Or PHYSICS 43: Electricity and Magnetism

Or from School of Engineering approved list

**Technology in Society**

One course required; course chosen must be on the SoE Approved Courses list at [ughb.stanford.edu](http://ughb.stanford.edu) the year taken.

**Engineering Fundamentals**

Two courses minimum, see Basic Requirement 3 6-8 units

**ENGR 14**: Intro to Solid Mechanics (3 units)

**AD Depth Core**

- CEE 31: Accessing Architecture Through Drawing (5 units)
- or CEE 31Q: Accessing Architecture Through Drawing
- CEE 100: Managing Sustainable Building Projects (or CEE 32B or CEE 32D) (4 units)
- CEE 120A: Building Information Modeling Workshop (2-4 units)
- CEE 130: Architectural Design: 3-D Modeling, Methodology, and Process (5 units)
- CEE 137B: Advanced Architecture Studio (6 units)
- ARTHIST 3: Introduction to World Architecture (5 units)

**Depth Options**

12 units

See Note 2 for course options

**Depth Electives**

Elective units must be such that courses in ENGR Fundamentals, Core, Depth Options, and Depth Electives total at least 63 units. One of the following must be taken:

- CEE 131C: How Buildings are Made – Materiality and Construction Methods (4 units)
- CEE 131D: Urban Design Studio (5 units)
- CEE 32D: Construction: The Writing of Architecture (5 units)
- CEE 32G: Responsive Structures (5 units)
- CEE 32V: Architectural Design Lecture Series Course (2 units)
- CEE 32T: Making and Remaking the Architect: Edward Durell Stone and Stanford (3 units)
- CEE 32U: California Modernism: The Web of Apprenticeship (4 units)
- CEE 32W: Making Meaning: A Purposeful Life in Design (5 units)
- CEE 133F: Principles of Freehand Drawing (4 units)

**Architectural Design Honors Program**

The AD honors program offers eligible students the opportunity to engage in guided original research, or project design, over the course of an academic year. For interested students the following outlines the process:

1. The student must submit a letter applying for the honors option endorsed by the student’s primary adviser and honors adviser and submitted to the student services office in CEE. Applications must be received in the fourth quarter prior to graduation. It is strongly suggested that students meet with the Architectural Design Program Director well in advance of submitting an application.
2. The student must maintain a GPA of at least 3.5.
3. The student must complete an honors thesis or project. The timing and deadlines are to be decided by the program or honors adviser. At least one member of the evaluation committee must be a member of the Academic Council in the School of Engineering.
4. The student must present the work in an appropriate forum, e.g., in the same session as honors theses are presented in the department of the advisor. All honors programs require some public presentation of the thesis or project.

**Atmosphere/Energy (A/E)**

Completion of the undergraduate program in Atmosphere/Energy leads to the conferral of the Bachelor of Science in Engineering. The subplan “Atmosphere/Energy” appears on the transcript and on the diploma.

**Mission of the Undergraduate Program in Atmosphere/Energy**

Atmosphere and energy are strongly linked: fossil-fuel energy use contributes to air pollution, global warming, and weather modification; and changes in the atmosphere feed back to renewable energy resources, including wind, solar, hydroelectric, and wave resources. The mission of the undergraduate program in Atmosphere/Energy (A/E) is to provide students with the fundamental background necessary to understand large- and local-scale climate, air pollution, and energy problems and solve them through clean, renewable, and efficient energy systems.
To accomplish this goal, students learn in detail the causes and proposed solutions to the problems, and learn to evaluate whether the proposed solutions are truly beneficial. A/E students take courses in renewable energy resources, indoor and outdoor air pollution, energy efficient buildings, climate change, renewable energy and clean-vehicle technologies, weather and storm systems, energy technologies in developing countries, electric grids, and air quality management. The curriculum is flexible. Depending upon their area of interest, students may take in-depth courses in energy or atmosphere and focus either on science, technology, or policy. The major is designed to provide students with excellent preparation for careers in industry, government, and research; and for study in graduate school.

### Requirements

#### Mathematics and Science (45 units minimum):

**Mathematics**

- 23 units minimum, including at least one course from each group:
  - **Group A**
    - MATH 53: Ordinary Differential Equations with Linear Algebra
    - CME 102: Ordinary Differential Equations for Engineers
  - **Group B**
    - CME 106: Introduction to Probability and Statistics for Engineers
    - STATS 60: Introduction to Statistical Methods: Precalculus
    - STATS 101: Data Science 101
    - STATS 110: Statistical Methods in Engineering and the Physical Sciences

**Science**

- 20 units minimum, including all of the following:
  - PHYSICS 41: Mechanics
  - PHYSICS 43: Electricity and Magnetism
  - or PHYSICS 45: Light and Heat
  - CHEM 31B: Chemical Principles II
  - or CHEM 31X: Chemical Principles Accelerated
  - CEE 70: Environmental Science and Technology

**Technology in Society (1 course)**

- 3-5 units

One 3-5 unit course required; must be on School of Engineering Approved List the year taken.

#### Writing in the Major (WIM)

- One 3-5 unit course required. Choose a TiS course that fulfills a WIM:
  - BIOE 131: Ethics in Bioengineering
  - COMM 120W: Digital Media in Society
  - OR one of these WIM courses:
    - CEE 100: Managing Sustainable Building Projects
    - EARTHSYS 200: Environmental Communication in Action: The SAGE Project

#### Engineering Fundamentals

Two courses minimum (recommend 3), including at least one of the following: 7-9 units

- ENGR 25E: Energy: Chemical Transformations for Production, Storage, and Use
- ENGR 50E: Introduction to Materials Science, Energy Emphasis
- Plus at least one of the following:
  - ENGR 10: Introduction to Engineering Analysis
  - ENGR 70A: Programming Methodology
  
A third Fundamental is optional but recommended (3-4 units)

#### Engineering Depth

- Required: 6-8 units

#### Group A: Atmosphere

- AA 100: Introduction to Aeronautics and Astronautics
- CEE 63: Weather and Storms
- CEE 101B: Mechanics of Fluids
- or ME 70: Introductory Fluids Engineering
- CEE 161C: Natural Ventilation of Buildings
- CEE 161I: Atmosphere, Ocean, and Climate Dynamics: The Atmospheric Circulation
- CEE 162I: Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation
- CEE 172: Air Quality Management
- CEE 178: Introduction to Human Exposure Analysis
- EARTHSYS 41N: The Global Warming Paradox
- EARTHSYS 111: Biology and Global Change
- EARTHSYS 142: Remote Sensing of Land
- or EARTHSYS 11Fundamentals of Geographic Information Science (GIS)
- EARTHSYS 188: Social and Environmental Tradeoffs in Climate Change and Decision-Making
- ME 131B: Fluid Mechanics: Compressible Flow and Turbomachinery
- MS&E 92Q: International Environmental Policy
- PHYSICS 199: The Physics of Energy and Climate Change
- EARTH 2: Climate and Society
- EARTHSYS 196: Implementing Climate Solutions at Scale

#### Group B: Energy

- APPPHYS 79Q: Energy Options for the 21st Century
- AA 116Q: Electric Automobiles and Aircraft
- or EE 155: Green Electronics
- CEE 156: Building Systems
- CEE 176A: Energy Efficient Buildings
- CEE 176B: Electric Power: Renewables and Efficiency
- CEE 176C: Energy Storage Integration - Vehicles, Renewables, and the Grid
- CEE 177S: Design for a Sustainable World
- EARTHSYS 46C: Environmental Impact of Energy Systems: What are the Risks?
- EARTHSYS 101: Energy and the Environment
- EARTHSYS 102: Fundamentals of Renewable Power
- ECON 17N: Energy, the Environment, and the Economy (OR OSPKYO TO 45 OR SIW 144)
- EE 151: Sustainable Energy Systems
- ENERGY 104: Sustainable Energy for 9 Billion
- ENGR 50E: Introduction to Materials Science, Energy Emphasis
- MATSCI 156: Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
- ME 182: Electric Transportation
- POLSCI 73: Energy Policy in California and the West
- OSPSANTG 29: Sustainable Cities: Comparative Transportation Systems in Latin America
Honors Program
The A/E honors program offers eligible students the opportunity to engage in guided original research, or project design, over the course of an academic year. Interested student must adhere to the following requirements:

1. Prospective honors students write up and submit a 1-2 page letter applying to the honors program in A/E describing the problem to be investigated. The letter must be signed by the student, the current primary adviser, and the proposed honors adviser, if different, and submitted to the student services office in the Department of Civil and Environmental Engineering (CEE). The application must include an unofficial Stanford transcript. Applications must be received in the fourth quarter prior to graduation. It is strongly suggested that prospective honors students meet with the proposed honors adviser well in advance of submitting an application.

2. Students must maintain a GPA of at least 3.5.

3. Students must complete an honors thesis or project over a period of three quarters. The typical length of the written report is 15-20 pages. The deadline for submission of the report is to be decided by the honors adviser, but should be no later than the end of the third week in May.

4. The report must be read and evaluated by the student’s honors adviser and one other reader. It is the student’s responsibility to find and obtain both the adviser and the reader. At least one of the two must be a member of the Academic Council in the School of Engineering.

5. Students must present the completed work in an appropriate forum, e.g. in the same session as honors theses are presented in the department of the adviser. All honors programs require some public presentation of the thesis or project.

6. Students may take up to 10 units of CEE 199H Undergraduate Honors Thesis (optional). However, students must take ENGR 202S Directed Writing Project or its equivalent sometime (required). Units for the writing class are beyond those required for the A/E major.

7. Two copies of the signed thesis must be provided to the CEE student services office no later than two weeks before the end of the student’s graduation quarter.

For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

Bioengineering (BIOE)
Completion of the undergraduate program in Bioengineering leads to the conferment of the Bachelor of Science in Bioengineering.

Mission of the Undergraduate Program in Bioengineering
The Stanford Bioengineering major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

Students will complete engineering fundamentals courses, including an introduction to bioengineering and computer programming. A series of core BIOE classes beginning in the second year leads to a student-selected depth area and a senior capstone design project. The department also organizes a summer Research Experience for Undergraduates (REU) (http://bioengineering.stanford.edu/student-resources/reu) program. BIOE graduates are well prepared to pursue careers and lead projects in research, medicine, business, law, and policy.

Requirements
Mathematics
14 units minimum
May also be satisfied with AP Calculus.

1 It is strongly recommended that CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers be taken rather than MATH 51 Linear Algebra and Differential Calculus of Several Variables and MATH 53 Ordinary Differential Equations with Linear Algebra. If you are taking the MATH 50 series, it is strongly recommended to take CME 192 Introduction to MATLAB. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. Although not required, CME 104 Linear Algebra and Partial Differential Equations for Engineers is recommended for some Bioengineering courses.

2 Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II; or CHEM 31X Chemical Principles Accelerated) and calculus-based Physics (PHYSICS 41 Mechanics and PHYSICS 43 Electricity and Magnetism), with at least 2 quarters of coursework in each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters.

For more information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu). Students pursuing a premed program need to take additional courses; see the UGHB, BioE Premed 4-Year Plan.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Bioengineering with Honors (BIOE-BSH). This program provides the opportunity for qualified BioE majors to conduct independent research at an advanced level with a faculty research adviser and documented in an honors thesis.

In order to receive departmental honors, students admitted to the program must:

1. Declare the honors program in Axess (BIOE-BSH).
2. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
3. Complete at least two quarters of research with a minimum of nine units of BIOE 191 Bioengineering Problems and Experimental Investigation or BIOE 191X Out-of-Department Advanced Research Laboratory in Bioengineering for a letter grade; up to three units may be used towards the bioengineering depth elective requirements.
4. Submit a completed thesis draft to the honors adviser and second reader by the third week of Spring Quarter. Further revisions and final endorsement are to be finished by the second Monday in May, when two signed bound copies plus one PC-compatible CD-ROM are to be submitted to the student services officer.
5. Attend the Bioengineering Honors Symposium at the end of Spring Quarter and give a poster or oral presentation, or present in another approved suitable forum.

For more information and application instructions, see the Bioengineering Honors Program (http://bioengineering.stanford.edu/academics/undergraduate-programs/bioengineering-honors-program) web site.

Biomechanical Engineering (BME)

Completion of the undergraduate program in Biomechanical Engineering leads to the conferral of the Bachelor of Science in Engineering. The subplan "Biomechanical Engineering" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Biomechanical Engineering

The mission of the undergraduate program in Biomechanical Engineering is to help students address health science challenges by applying engineering mechanics and design to the fields of biology and medicine. The program is interdisciplinary in nature, integrating engineering course work with biology and clinical medicine. Research and teaching in this discipline focus primarily on neuromuscular, musculoskeletal, cardiovascular, and cell and tissue biomechanics. This major prepares students for graduate studies in bioengineering, biomechanics, medicine or related areas.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Biomedical Engineering with Honors. This program provides an opportunity for qualified BME majors to conduct independent study and research related to biomedical engineering at an advanced level with a faculty mentor.

Honors Criteria:

• GPA of 3.5 or higher in the major
• Arrangement with an ME faculty member (or a faculty member from another department who is approved by the BME Undergraduate Program Director) who agrees to serve as the honors adviser, plus a second faculty member who reads and approves the thesis. The honors adviser must be a member of the Academic Council in the School of Engineering.
• Applications are subject to the review and final approval by the BME Undergraduate Program Director. Applicants and thesis advisers receive written notification when a decision has been made. Submit application documents to the student services office, Building 530, room 125.
• An application consists of
  • One page written statement describing the research topic
  • Unofficial Stanford transcript
  • Signature of thesis adviser and thesis reader agreeing to serve on the committee
  • Deadline: No later than the second week of the Autumn Quarter of the senior year
• In order to graduate with honors:
  • Declare ENGR-BSH (honors) program in Axess
  • Maintain 3.5 GPA
  • Submit a completed thesis draft to the adviser and reader by April 1
  • Present the thesis synopsis at the Mechanical Engineering Poster Session held in April
  • Further revisions and a final endorsement by the adviser and reader are to be completed by May 15 when two bound copies are to be submitted to the Mechanical Engineering student services office.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

Biomedical Computation (BMC)

Completion of the undergraduate program in Biomedical Computation leads to the conferral of the Bachelor of Science in Engineering. The subplan "Biomedical Computation" appears on the transcript and on the diploma.

Mission of the Undergraduate Program in Biomedical Computation

Quantitative and computational methods are central to the advancement of biology and medicine in the 21st century. These methods span the analysis of biomedical data, the construction of computational models for biological systems, and the design of computer systems that help biologists and physicians create and administer treatments to patients. The Biomedical Computation major prepares students to work at the cutting edge of this interface between computer science, biology, and medicine. Students begin their journey by acquiring foundational knowledge in the underlying biological and computational disciplines. They learn techniques in informatics and simulation and their numerous applications in understanding and analyzing biology at all levels, from individual molecules in cells to entire organs, organisms, and populations. Students then focus their efforts in a depth area of their choosing, and participate in a substantial research project with a
Stanford faculty member. Upon graduation, students are prepared to enter a range of disciplines in either academia or industry.

2. Research projects require pre-approval of BMC Coordinators.
Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students’ understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program’s core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government, or for graduate study.

**CHEMENG 174** Environmental Microbiology I
**CHEMENG 183** Biochemistry II
**CHEMENG 196** Creating New Ventures in Engineering and Science-based Industries

**Total Units** 125-135

1 Unit count is higher if program includes one or more of the following: MATH 51 and MATH 52 in lieu of CME 100; or CHEM 31A and CHEM 31B in lieu of CHEM 31X.
2 Any two acceptable except combining 160 and 162.
3 Students may substitute two of the depth electives with two other science and engineering 3-unit lecture courses. See Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu) for additional details.
4 For additional information and sample programs, see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu)

---

**Civil Engineering (CE)**

Completion of the undergraduate program in Civil Engineering leads to the conferral of the Bachelor of Science in Civil Engineering.

**Mission of the Undergraduate Program in Civil Engineering**

The mission of the undergraduate program in Civil Engineering is to provide students with the principles of engineering and the methodologies necessary for civil engineering practice. This pre-professional program balances the fundamentals common to many specialties in civil engineering and allows for concentration in structures and construction or environmental and water studies. Students in the major learn to apply knowledge of mathematics, science, and civil engineering to conduct experiments, design structures and systems to creatively solve engineering problems, and communicate their ideas effectively. The curriculum includes course work in structural, construction, and environmental engineering. The major prepares students for careers in consulting, industry and government, as well as for graduate studies in engineering.

**Other School of Engineering Electives** 3-0

**Total Units** 109-111

1 Mathematics must include CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers (or Math 51 Linear Algebra and Differential Calculus of Several Variables and MATH 53 Ordinary Differential Equations with Linear Algebra) and a Statistics course. Science must include Physics 41 Mechanics, either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM31A Chemical Principles I or CHEM 31X Chemical Principles; two additional quarters in either chemistry or physics, and GS 1A Introduction to Geology: The Physical Science of the Earth (or GS 1B or 1C); for students in the Environmental and Water Studies track, the additional chemistry or physics must include CHEM 33; for students in the Structures and Construction track, it must include PHYSICS 43 or 45. Please note that the only quarter GS 1A is offered for AY 2015-16 is Spring Quarter.

2 Chosen TiS class must specifically include an ethics component, as indicated in Figure 3-3 in the Engineering Undergraduate Handbook (http://web.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Handbooks)

3 CEE 100 meets the Writing in the Major (WIM) requirement
Structures and Construction Focus

CEE 102  Legal Principles in Design, Construction, and Project Delivery  3
CEE 120A  Building Information Modeling Workshop (or CEE 120S)  3-4
CEE 156  Building Systems  4
CEE 180  Structural Analysis  4
CEE 181  Design of Steel Structures  4
CEE 182  Design of Reinforced Concrete Structures  4
CEE 183  Integrated Civil Engineering Design Project  4
CE 199  Undergraduate Research in Civil and Environmental Engineering  1-4

Select one of the following (beyond the 2 required Engineering Fundamentals):

ENGR 50  Introduction to Materials Science, Nanotechnology Emphasis  4
ENGR 50E  Introduction to Materials Science, Energy Emphasis
ENGR 50M  Introduction to Materials Science, Biomaterials Emphasis

Remaining specialty units from:

ENGR 15  Dynamics  3
CME 104  Linear Algebra and Partial Differential Equations for Engineers  5
CEE 101D  Compendium in Civil and Environmental Engineering (or CEE 101S)  3
CEE 112A  Industry Applications of Virtual Design & Construction  2-4
CEE 112B  Industry Applications of Virtual Design & Construction  2-4
CEE 122A  Computer Integrated Architecture/Engineering/Construction  2
CEE 122B  Computer Integrated A/E/C  2
CEE 131A  Professional Practice: Mixed Use Design in an Urban Setting (not given AY 2015-16)  2
CEE 131B  Financial Management of Sustainable Urban Systems  3
CEE 141A  Infrastructure Project Development  3
CEE 141B  Infrastructure Project Delivery  3
CEE 151  Negotiation  3
CEE 155  Introduction to Sensing Networks for CEE  4
CEE 161C  Natural Ventilation of Buildings  3
CEE 162E  Rivers, Streams, and Canals  3-4
CEE 171  Environmental Planning Methods  3
CEE 176A  Energy Efficient Buildings  3-4
CEE 176B  Electric Power: Renewables and Efficiency  3-4
CEE 195  Fundamentals of Structural Geology  3
CEE 196  Engineering Geology and Global Change  3
CEE 199  Undergraduate Research in Civil and Environmental Engineering  1-4
CEE 203  Probabilistic Models in Civil Engineering  3-4

One of the following can also count as remaining specialty units.  3-4
CEE 120B  Building Information Modeling Workshop  2-4
CEE 130  Architectural Design: 3-D Modeling, Methodology, and Process
CEE 131A  Professional Practice: Mixed-Use Design in an Urban Setting
CEE 134B  Intermediate Arch Studio

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

Computer Science (CS)

Completion of the undergraduate program in Computer Science leads to the conferral of the Bachelor of Science in Computer Science.

Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students’ breadth of knowledge across the subject areas of computer science, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, the corporate sector, and for graduate study.

Requirements

Mathematics (26 units minimum)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 103</td>
<td>5</td>
</tr>
<tr>
<td>CS 109</td>

<td>3</td>
</tr>
<tr>
<td>MATH 20</td>
<td>3</td>
</tr>
<tr>
<td>MATH 21</td>
<td>4</td>
</tr>
<tr>
<td>Plus two electives</td>
<td></td>
</tr>
</tbody>
</table>

Science (11 units minimum)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYSICS 41</td>
<td>4</td>
</tr>
<tr>
<td>PHYSICS 43</td>
<td>4</td>
</tr>
<tr>
<td>Science elective</td>
<td>3</td>
</tr>
</tbody>
</table>

Technology in Society (3-5 units)—

One course; course chosen must be on the SoE Approved Courses list at <ughb.stanford.edu> the year taken; see Basic Requirements 4 in the School of Engineering section.
Engineering Fundamentals (13 units minimum; see Basic Requirement 3 in the School of Engineering section)—

- CS 106B Programming Abstractions 5
- or CS 106X Programming Abstractions (Accelerated)
- ENGR 40M An Intro to Making: What is EE (or ENGR 40A and ENGR 40B) 3-5

Fundamentals Elective (May be an ENGR fundamentals or an additional CS Depth course. See Fig. 3-4 in the UGHB for approved ENGR fundamentals list. May not be any CS 106)

*Students who take ENGR 40A or 40M for fewer than 5 units are required to take 1-2 additional units of ENGR Fundamentals (13 units minimum), or 1-2 additional units of Depth (27 units minimum for track and elective courses).

Writing in the Major—
Select one of the following:

- CS 181W Computers, Ethics, and Public Policy
- CS 191W Writing Intensive Senior Project
- CS 194W Software Project
- CS 210B Software Project Experience with Corporate Partners
- CS 294W Writing Intensive Research Project in Computer Science

Computer Science Core (15 units)—

- CS 107 Computer Organization and Systems 5
- or CS 107E Computer Systems from the Ground Up
- CS 110 Principles of Computer Systems 5
- CS 161 Design and Analysis of Algorithms 5

Senior Project (3 units)—

- CS 191 Senior Project
- CS 191W Writing Intensive Senior Project
- CS 194 Software Project
- CS 194H User Interface Design Project
- CS 194W Software Project
- CS 210B Software Project Experience with Corporate Partners
- CS 294 Writing Intensive Research Project in Computer Science

Computer Science Depth B.S.

Choose one of the following ten CS degree tracks (a track must consist of at least 25 units and 7 classes):

Artificial Intelligence Track—

- CS 221 Artificial Intelligence: Principles and Techniques 4

Select two courses, each from a different area:

Area I, AI Methods:

- CS 228 Probabilistic Graphical Models: Principles and Techniques
- CS 229 Machine Learning
- CS 234 Reinforcement Learning
- CS 238 Decision Making under Uncertainty

Area II, Natural Language Processing:

- CS 124 From Languages to Information
- CS 224N Natural Language Processing with Deep Learning
- CS 224S Spoken Language Processing

CS 224U Natural Language Understanding

Area III, Vision:

- CS 131 Computer Vision: Foundations and Applications
- CS 231A Computer Vision: From 3D Reconstruction to Recognition
- CS 231N Convolutional Neural Networks for Visual Recognition

Area IV, Robotics:

- CS 223A Introduction to Robotics

Select one additional course from the Areas above or from the following:

AI Methods:

- CS 157 Logic and Automated Reasoning
- STATS 315A Modern Applied Statistics: Learning
- STATS 315B Modern Applied Statistics: Data Mining

Vision:

- CS 231B
- CS 231M
- CS 331A

Comp Bio:

- CS 262
- CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells
- CS 371 Computational Biology in Four Dimensions
- CS 374

Information and the Web:

- CS 276 Information Retrieval and Web Search
- CS 224W Analysis of Networks

Other:

- CS 227B General Game Playing
- CS 277
- CS 379 Interdisciplinary Topics

Robotics and Control:

- CS 327A Advanced Robotic Manipulation
- CS 329 Topics in Artificial Intelligence (with advisor approval)
- ENGR 205 Introduction to Control Design Techniques
- EE 209
- MS&E 251 Introduction to Stochastic Control with Applications
- MS&E 351 Dynamic Programming and Stochastic Control

Track Electives: at least three additional courses selected from the Areas and lists above, general CS electives, or the following: 4

- CS 238 Decision Making under Uncertainty
- CS 275 Translational Bioinformatics
- CS 326 Topics in Advanced Robotic Manipulation
- CS 334A Convex Optimization I
- or EE 364A Convex Optimization I
- CS 428 Computation and cognition: the probabilistic approach
- EE 278 Introduction to Statistical Signal Processing
- EE 364B Convex Optimization II
- ECON 286 Game Theory and Economic Applications
- MS&E 252 Decision Analysis I: Foundations of Decision Analysis
The Mathematics, Science, and Engineering Fundamentals requirements are non-standard for this track. See Handbook for Undergraduate Engineering Programs for details.

Select one of the following: 3-4

CS 221 Artificial Intelligence: Principles and Techniques
CS 228 Probabilistic Graphical Models: Principles and Techniques
CS 229 Machine Learning
CS 231A Computer Vision: From 3D Reconstruction to Recognition

Select one of the following:

CS 262
CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
CS 273A The Human Genome Source Code
CS 274 Representations and Algorithms for Computational Molecular Biology
CS 275 Translational Bioinformatics
CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells

One additional course from the lists above or the following: 3-4

CS 124 From Languages to Information
CS 145 Introduction to Databases
CS 147 Introduction to Human-Computer Interaction Design
CS 148 Introduction to Computer Graphics and Imaging
CS 248 Interactive Computer Graphics

One course selected from the following: 3-4

CS 108 Object-Oriented Systems Design
CS 124 From Languages to Information
CS 131 Computer Vision: Foundations and Applications
CS 140 Operating Systems and Systems Programming
or CS 140E Operating Systems and Systems Design and Implementation
CS 142 Web Applications
CS 143 Compilers
CS 144 Introduction to Computer Networking
CS 145 Introduction to Databases
CS 147 Introduction to Human-Computer Interaction Design
CS 148 Introduction to Computer Graphics and Imaging
CS 149 Parallel Computing
CS 154 Introduction to Automata and Complexity Theory
CS 155 Computer and Network Security
CS 157 Logic and Automated Reasoning
or PHIL 151 Metalogic
CS 164
CS 166 Data Structures 3-4
CS 167
CS 168 The Modern Algorithmic Toolbox 3-4
CS 190 Software Design Studio 3
CS 205B Mathematical Methods for Fluids, Solids, and Interfaces 3
CS 210A Software Project Experience with Corporate Partners 3-4
CS 221 Artificial Intelligence: Principles and Techniques 3-4
CS 223A Introduction to Robotics 3
CS 224N Natural Language Processing with Deep Learning 3-4
CS 224S Spoken Language Processing 2-4
CS 224U Natural Language Understanding 3-4
CS 224W Analysis of Networks 3-4
CS 225A Experimental Robotics 3
CS 227B General Game Playing 3
CS 228 Probabilistic Graphical Models: Principles and Techniques
CS 229 Machine Learning 3-4
CS 229T Statistical Learning Theory 3
CS 231A Computer Vision: From 3D Reconstruction to Recognition 3-4
CS 243 Programming Languages 3
CS 244 Advanced Topics in Networking 3-4
CS 244B Distributed Systems 3
CS 245 Database Systems Principles 3
CS 246 Mining Massive Data Sets 3-4
CS 247 Human-Computer Interaction Design Studio 3-4
CS 248 Interactive Computer Graphics 3-4
CS 249A Bitcoin and Crypto Currencies 3
CS 251 Computational Complexity 3
CS 255 Introduction to Cryptography 3
CS 261 Optimization and Algorithmic Paradigms 3
CS 262
CS 263 Algorithms for Modern Data Models 3
CS 264 Beyond Worst-Case Analysis 3
CS 265 Randomized Algorithms and Probabilistic Analysis 3
CS 266
CS 267 Graph Algorithms 3
CS 269I Incentives in Computer Science 3

Optional Elective 4

Information Track—

Units
CS 124 From Languages to Information 4
CS 145 Introduction to Databases 4
Two courses, from different areas: 6-9
1) Information-based AI applications
   CS 224N Natural Language Processing with Deep Learning
   CS 224S Spoken Language Processing
   CS 229 Machine Learning
   CS 233 Geometric and Topological Data Analysis
   CS 234 Reinforcement Learning
2) Database and Information Systems
   CS 140 Operating Systems and Systems Programming
   or CS 140E Operating systems design and implementation
   CS 142 Web Applications
   CS 245 Database Systems Principles
   CS 246 Mining Massive Data Sets
   CS 341 Project in Mining Massive Data Sets
   CS 345 (Offered occasionally)
   CS 346
   CS 347
3) Information Systems in Biology
   CS 262
   CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
   CS 274 Representations and Algorithms for Computational Molecular Biology
4) Information Systems on the Web
   CS 224W Analysis of Networks
   CS 276 Information Retrieval and Web Search
At least three additional courses from the above areas or the general CS electives list. 4

Systems Track—

Units
CS 140 Operating Systems and Systems Programming 4
or CS 140E Operating systems design and implementation
Select one of the following: 3-4
   CS 143 Compilers
   EE 180 Digital Systems Architecture
Two additional courses from the list above or the following: 6-8
<table>

Select one of the following: 4

- CS 140
- CS 140E

One additional course from the list above or the following: 3-4

- CS 144
- CS 155
- CS 190
- CS 242
- CS 244
- EE 180

Select one of the following: 3-4

- CS 221
- CS 228
- CS 229
- CS 231A

Select one of the following: 3-4

- CS 145
Individually Designed Track—

Students may propose an individually designed track. Proposals should include a minimum of 25 units and seven courses, at least four of which must be CS courses numbered 100 or above. See Handbook for Undergraduate Engineering Programs for further information.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

1. MATH 19, MATH 20, and MATH 21 OR MATH 41 and MATH 42 OR AP Calculus Credit may be used as long as at least 26 MATH units are taken. AP Calculus Credit must be approved by the School of Engineering.

2. The math electives list consists of: MATH 51, MATH 104, MATH 108, MATH 109, MATH 110, MATH 113; CS 157, CS 205A; PHIL 151; CME 100, CME 102, CME 103 (or EE103); CME 104. Completion of MATH 52 and MATH 53 will together count as one math elective. Restrictions: CS 157 and PHIL 151 may not be used in combination to satisfy the math electives requirement. Students who have taken both MATH 51 and MATH 52 may not count CME 100 as an elective. Courses counted as math electives cannot also count as CS electives, and vice versa.

3. The science elective may be any course of 3 or more units from the School of Engineering Science list (Fig. 4-2 in the UGHB), PSYCH 30, or AP Chemistry Credit. Either of the PHYSICS sequences 61/63 or 41/43 can be used as long as at least 11 science units are taken. AP Chemistry Credit and AP Physics Credit must be approved by the School of Engineering.

5. CS 205A Mathematical Methods for Robotics, Vision, and Graphics is strongly recommended in this list for the Graphics track. Students taking CME 104 Linear Algebra and Partial Differential Equations for Engineers are also required to take its prerequisite, CME 102 Ordinary Differential Equations for Engineers.

6. Independent study projects (CS 191 Senior Project or CS 191W Writing Intensive Senior Project) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS senior project adviser (P. Young). A signed approval form, along with a brief description of the proposed project, should be filed the quarter before work on the project is begun. Further details can be found in the Handbook for Undergraduate Engineering Programs.

Electrical Engineering (EE)

Completion of the undergraduate program in Electrical Engineering leads to the conferral of the Bachelor of Science in Electrical Engineering.
Minimum 60 units comprised of: Engineering Fundamentals (minimum 10 units), Core Electrical Engineering Courses (minimum 16 units), Disciplinary Area (minimum 17 units), Electives (maximum 17 units, restrictions apply).

**Electives**

Disciplinary Area. Select one. Students may select their Design course from any Design Requirements. Select one. A single course can concurrently meet the WIM and Writing in the Major (WIM) disciplinary area electives.

Minimum 17 units, 5 courses: 1-2 Required, 1 WIM/Design and 2-3 disciplinary area electives. The EE introductory class ENGR 40A and ENGR 40B or ENGR 40M may be taken concurrently with either EE 42 or PHYSICS 43. There are no prerequisites for ENGR 40A and ENGR 40B or ENGR 40M.

**Core Electrical Engineering Courses**

EE 100 The Electrical Engineering Profession
EE 101A Circuits I
EE 102A Signal Processing and Linear Systems I
EE 108 Digital System Design

Physics of Electrical Engineering.

EE 65 Modern Physics for Engineers

**Disciplinary Area**

Minimum 17 units, 5 courses: 1-2 Required, 1 WIM/Design and 2-3 disciplinary area electives.

**Writing in the Major (WIM)**

Select one. A single course can concurrently meet the WIM and Design Requirements.

EE 109 Digital Systems Design Lab (WIM/Design)
EE 133 Analog Communications Design Laboratory (WIM/Design)
EE 134 Introduction to Photonics (WIM/Design)
EE 153 Power Electronics (WIM/Design)
EE 155 Green Electronics (WIM/Design)
EE 168 Introduction to Digital Image Processing (WIM/Design)
EE 191W Special Studies and Reports in Electrical Engineering (WIM; Department approval required)
EE 264W Digital Signal Processing (WIM/Design)
CS 194W Software Project (WIM/Design)

**Design Course**

Select one. Students may select their Design course from any Disciplinary Area.

EE 109 Digital Systems Design Lab (WIM/Design)
EE 133 Analog Communications Design Laboratory (WIM/Design)
EE 134 Introduction to Photonics (WIM/Design)
EE 153 Power Electronics (WIM/Design)
EE 155 Green Electronics (WIM/Design)
EE 168 Introduction to Digital Image Processing (WIM/Design)
EE 262 Two-Dimensional Imaging (Design)
EE 264 Digital Signal Processing (Design)
EE 264W Digital Signal Processing (WIM/Design)
EE 267 Virtual Reality (Design)
CS 194 Software Project (Design)
CS 194W Software Project (WIM/Design)

**Electives**

Minimum 17 units. Students may select electives from the disciplinary areas; from the multidisciplinary elective areas; or any combination of disciplinary and multidisciplinary areas. May include up to two additional Engineering Fundamentals, any CS 133 course and any letter graded EE courses (minus any previously noted restrictions). Freshman and Sophomore seminars, EE 191 and CS 106A do not count toward the 60 units. Students may have fewer elective units if they have more units in their disciplinary area.

1. Math 41 and Math 42 are no longer offered and have been replaced by Math 19, Math 20, and Math 21.
2. MATH 52 may be taken in place of MATH 51. CME 102 can be taken in place of MATH 53.
3. EE 42 may be used in place of PHYSICS 43 (if not used in EE electives area). The EE introductory class ENGR 40A and ENGR 40B or ENGR 40M may be taken concurrently with either EE 42 or PHYSICS 43. There are no prerequisites for ENGR 40A and ENGR 40B or ENGR 40M.
4. For upper division students, a 200-level seminar in their disciplinary area will be accepted, on petition.
5. Students may petition to have either PHYSICS 65 or the combination of PHYSICS 45 and PHYSICS 70 count as an alternative to EE 65.
6. EE 191W may satisfy WIM only if it is a follow-up to an REU, independent study project or as part of an honors thesis project where a faculty agrees to provide supervision of writing a technical paper and with suitable support from the Writing Center.
7. To satisfy Design, must take EE 264 or EE 267 for 4 units and complete the laboratory project.

---

**Engineering Physics (EPHYS)**

Completion of the undergraduate program in Engineering Physics leads to the conferral of the Bachelor of Science in Engineering. The subplan 'Engineering Physics' appears on the transcript and on the diploma.

**Mission of the Undergraduate Program in Engineering Physics**

The mission of the undergraduate program in Engineering Physics is to provide students with a strong foundation in physics and mathematics, together with engineering and problem-solving skills. All majors take high-level math and physics courses as well as engineering courses. This background prepares them to tackle complex problems in multidisciplinary areas that are at the forefront of 21st-century technology such as aerospace physics, biophysics, computational science, quantum science & engineering, materials science, nanotechnology, electromechanical systems, energy systems, renewable energy, and any other engineering field that requires a solid background in physics. Because the program emphasizes science, mathematics, and engineering, students are well prepared to pursue graduate work in engineering, physics, or applied physics.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Engineering: Engineering Physics with Honors.

Honors Criteria

1. Minimum overall GPA of 3.5.
2. Independent research conducted at an advanced level with a faculty research adviser and documented in an honors thesis. The honors candidate must identify a faculty member who will serve as his or her honors research adviser and a second reader who will be asked to read the thesis and give feedback before endorsing the thesis. One of the two must be a member of the Academic Council and in the School of Engineering.

Application: The deadline to apply is October 15 in Autumn Quarter of the senior year. The application documents should be submitted to the Student Services Officer. Applications are reviewed by a subcommittee of the faculty advisers for Engineering Physics majors. Applicants and thesis advisers receive written notification when the application is approved. An application consists of three items:

1. One-page description of the research topic
3. Unofficial Stanford transcript

Requirements and Timeline for Honors in Engineering Physics:

1. Declare the honors program in Axess (ENGR-BSH, Subplan: Engineering Physics)
2. Obtain application form from the student services officer.
3. Apply to honors program by October 15 in the Autumn Quarter of the senior year.
4. Maintain an overall GPA of at least 3.5.
5. Optional: Under direction of the thesis adviser, students may enroll for research units in ENGR 199(W) or in departmental courses such as AA 190 or ME 191(H).
6. Submit a completed thesis draft to the research adviser and second reader by April 15.
7. Present the thesis work in an oral presentation or poster session in an appropriate forum (e.g., an event that showcases undergraduate research and is organized by the department of the adviser, the school of the adviser, or the University).
8. Incorporate feedback, which the adviser and second reader should provide by April 30, and obtain final endorsement signatures from the thesis adviser and second reader by May 15.
9. Submit one signed, single-sided copy to the student services officer by May 15. Students are sent email instructions on how to archive a permanent electronic copy in Terman Engineering Library.

Environmental Systems Engineering (EnvSE)

Completion of the undergraduate program in Environmental Systems Engineering leads to the conferral of the Bachelor of Science in Environmental Systems Engineering.

Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math/science/engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the twenty-first century involving natural and built environments, in consulting and industry as well as in graduate school.

Requirements

Mathematics and Science

See Basic Requirement 1 and 2

Technology in Society (TiS)

One 3-5 unit course required, course chosen must be on the SoE Approved Courses list at <ughb.stanford.edu> the year taken; see Basic Requirement 4

Engineering Fundamentals

Two courses minimum (see Basic Requirement 3), including:

ENGR 70A Programming Methodology
(or ENGR 70X)
ENGR 14 Intro to Solid Mechanics
Fundamental Tools/Skills

in visual, oral/written communication, and modeling/analysis

Specialty Courses, in either

Coastal environments (see below)
or freshwater environments (see below)
or urban environments (see below)

Total Units

96-100
Urban Environments Focus Area (37 units)

Individually Designed Majors in Engineering (IDMENS)

Completion of the undergraduate program in Individually Designed Majors in Engineering (IDMEN) leads to the conferral of the Bachelor of Science in an Individually Designed Major: (approved title). The approved title of the IDMEN also appears on the transcript.

Mission of the Undergraduate Program in Individually Designed Majors in Engineering

The mission of the undergraduate program in Individually Designed Majors in Engineering (IDMEN) is to provide students with an understanding of engineering principles and the analytical and problem solving, design, and communication skills necessary to be successful in the field. The B.S. for IDMENs is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. Core courses in the curriculum include engineering fundamentals, mathematics, technology in society, and the sciences. Students then take additional courses pertinent to their IDMEN major. The program prepares students for careers in government and the corporate sector, and for graduate study.

B.S. in Individually Designed Majors in Engineering

The B.S. degree for IDMENs is intended for undergraduates interested in pursuing engineering programs that, by virtue of their focus and intellectual content, cannot be accommodated by existing departmental majors or the pre-approved School of Engineering majors. IDMEN curricula are designed by students with the assistance of two faculty advisers of their choice and are submitted to the Undergraduate Council's Subcommittee on Individually Designed Majors. The degree conferred is "Bachelor of Science in Individually Designed Major in Engineering: (approved title)."

Students must submit written proposals to the IDMEN subcommittee detailing their course of study. Programs must meet the following requirements: mathematics (21 units minimum, see Basic Requirement 1 in right sidebar); science (17 units minimum, see Basic Requirement 2); a Technology in Society (one course from School of Engineering Approved Courses list; the course must be on the list the year it is taken; see Basic Requirement 4); at least two Engineering Fundamentals courses, see Basic Requirement 3 for a list of courses; a minimum of 34 units of engineering depth courses, including a capstone depth course with content relevant to proposed goals; and sufficient relevant additional course work to bring the total number of units to at least 90 and at most 107. Students may take additional courses pertinent to their IDMEN major, but the IDMEN proposal itself may not exceed 107 units. Students are responsible for completing the prerequisites for all courses included in their majors.
Each proposal should begin with a statement describing the proposed major. In the statement, the student should make clear the motivation for and goal of the major, and indicate how it relates to her or his projected career plans. The statement should specify how the courses to be taken relate to and move the student toward realizing the major’s goal. A proposed title for the major should be included. The title approved by the IDMEN Subcommittee is listed on the student’s official University transcript and on the diploma in this form: “Individually Designed Major in Subplan”, where “Subplan” is the title approved by the IDMEN Subcommittee.

The proposal statement should be followed by a completed Program Sheet listing all the courses comprising the student’s IDMEN curriculum, organized by the five categories printed on the sheet (mathematics, science, technology in society, engineering fundamentals, and engineering depth). Normally, the courses selected should comprise a well-coordinated sequence or sequences that provide mastery of important principles and techniques in a well-defined field. In some circumstances, especially if the proposal indicates that the goal of the major is to prepare the student for graduate work outside of engineering, a more general engineering program may be appropriate. A four-year study plan, showing courses to be taken each quarter, should also be included in the student’s IDMEN proposal.

The proposal must be signed by two faculty members who certify that they endorse the major as described in the proposal and that they agree to serve as the student’s permanent advisers. One of the faculty members, who must be a member of the School of Engineering and of the Academic Council, acts as the student’s primary adviser. The proposal must be accompanied by a statement from that person giving an appraisal of the academic value and viability of the proposed major.

Students proposing IDMENs must have at least four quarters of undergraduate work remaining at Stanford after the quarter in which their proposals are first submitted. Any changes in a previously approved major must be endorsed by the advisers and re-approved by the IDMEN subcommittee. A request by a student to make changes in her or his approved curriculum must be made sufficiently far in advance so that, should the request be denied, adequate time remains to complete the original, approved curriculum. Proposals are reviewed and acted upon once a quarter. Planning forms may be obtained from the Handbook for Undergraduate Engineering Programs at http://ughb.stanford.edu. Completed proposals should be submitted to Darlene Lazar in the Office of Student Affairs, Huang Engineering Center, Suite 135. An IDMEN cannot be a student’s secondary major.

Management Science and Engineering (MS&E)

Area Courses (see below)
Choose four or five courses (minimum 15 units) from a primary area and two courses (minimum 6 units) from each of the other two areas.

**Depth Areas**

**Finance and Decision Area**

Students choosing F&D as their primary area must take at least two of ECON 51, MS&E 145 (or 245A), and MS&E 152 (or 252), as part of their 15 units.

Introductory (no prerequisites)
- MS&E 147 Finance and Society for non-MBAs
- MS&E 152 Introduction to Decision Analysis

Intermediate (has prerequisites and/or appropriate for juniors and seniors)
- MS&E 145 Introduction to Investment Science
- MS&E 146 Corporate Financial Management
- MS&E 252 Decision Analysis I: Foundations of Decision Analysis

Advanced (intended primarily for graduate students, but may be taken by advanced undergraduates)
- MS&E 245A Investment Science
- MS&E 245B Advanced Investment Science
- MS&E 246 Financial Risk Analytics
- MS&E 250A Engineering Risk Analysis
- MS&E 250B Project Course in Engineering Risk Analysis

**Operations and Analytics Area**

Students choosing O&A as their primary area may also include CS 161, CS 229, and STATS 202 in their selections.

Methods
- MS&E 112 Mathematical Programming and Combinatorial Optimization
- MS&E 135 Networks
- MS&E 213 Introduction to Optimization Theory
- MS&E 222 Simulation
- MS&E 226 "Small" Data
- MS&E 231 Introduction to Computational Social Science
- MS&E 237 Networks, Markets, and Crowds
- MS&E 251 Introduction to Stochastic Control with Applications

Applications
- MS&E 130 Information Networks and Services
- MS&E 233 Networked Markets
- MS&E 234 Data Privacy and Ethics
- MS&E 235 Network Analytics
- MS&E 260 Introduction to Operations Management
- MS&E 262 Supply Chain Management
- MS&E 263 Healthcare Operations Management
- MS&E 267 Service Operations and the Design of Marketplaces
- MS&E 330 Law, Order & Algorithms

Organizations, Technology, and Policy Area

Students choosing O&T&P as their primary area must take at least two of ENGR 145, MS&E 175, MS&E 184, and MS&E 185 as part of their 15 units.

Introductory (no prerequisites)
- ENGR 131 Ethical Issues in Engineering
- MS&E 190 Methods and Models for Policy and Strategy Analysis
- MS&E 193 Technology and National Security

Advanced (has prerequisites and/or appropriate for juniors and seniors)
- ENGR 145 Technology Entrepreneurship
- MS&E 175 Innovation, Creativity, and Change or MS&E 177 Creativity Rules

- MS&E 295 Energy Policy Analysis

1. Math and Science must total a minimum of 44 units. Electives must come from the School of Engineering approved list, or, PSYCH 50 Introduction to Cognitive Neuroscience, or PSYCH 70 Self and Society: Introduction to Social Psychology, and may not repeat material from any other requirement. AP/IB credit for Chemistry and Physics may be used.

3. Students may petition to place out of CS 106A Programming Methodology.

4. Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

**Materials Science and Engineering (MATSCI)**

Completion of the undergraduate program in Materials Science and Engineering leads to the conferral of the Bachelor of Science in Materials Science and Engineering.

**Mission of the Undergraduate Program in Materials Science and Engineering**

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students’ knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for
undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

**Requirements**

**Mathematics**

20 units minimum; see Basic Requirement 1

Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 51 Linear Algebra and Differential Calculus of Several Variables</td>
<td>5</td>
</tr>
<tr>
<td>CME 100/ENGR 154 Vector Calculus for Engineers</td>
<td>5</td>
</tr>

Mechanical Engineering (ME)

Completion of the undergraduate program in Mechanical Engineering leads to the conferral of the Bachelor of Science in Mechanical Engineering.

Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of theoretical and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide range of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro- mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or other fields where a broad engineering background is useful.

Requirements

Mathematics
24 units minimum; see Basic Requirement 1

<table>
<thead>
<tr>
<th>Course Code</th>

Engineering Depth
Minimum of 68 Engineering Science and Design ABET units; see Basic Requirement 5

ENGR 14 Intro to Solid Mechanics 3
ENGR 15 Dynamics 3
ME 30 Engineering Thermodynamics 3
ME 70 Introductory Fluids Engineering 4
ME 80 Mechanics of Materials 4
ME 101 Visual Thinking 4
ME 103D Engineering Drawing and Design 1
ME 112 Mechanical Systems Design 4
Take one of the following:

ME 113 Mechanical Engineering Design
ME 170B Mechanical Engineering Design: Integrating Context with Engineering 3
ME 131A Heat Transfer 3-5
ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery 4
ME 140 Advanced Thermal Systems 4
ME 141 Alternative Energy Systems 5
ME 161 Dynamic Systems, Vibrations and Control 4
ME 203 Design and Manufacturing 2

1 Math and science must total 45 units.
   • Math: 24 units required and must include a course in differential equations
     (CME 102 Ordinary Differential Equations for Engineers or MATH 53
     Ordinary Differential Equations with Linear Algebra; one of these required)
     and calculus-based Statistics (CME 106 Introduction to Probability and
     Statistics for Engineers or STATS 110 Statistical Methods in Engineering
     and the Physical Sciences or STATS 116 is required).
   • Science: 20 units minimum and requires courses in calculus-based
     Physics and Chemistry, with at least a full year (3 courses) in one or the
     other. CHEM 31A Chemical Principles I/CHEM 31B Chemical Principles
     II are considered one course because they cover the same material
     as CHEM 31X Chemical Principles Accelerated but at a slower pace.
     CHEM 31X Chemical Principles Accelerated is recommended.

2 Courses ME 103D and ME 203 must be taken concurrently.

3 ME 170A and ME 170B are a 2-quarter Capstone Design Sequence
   and must be taken in consecutive quarters. Students that take the
   Capstone Design Sequence may use ME 170B as an alternative to
   ME 113. ME 170A will then be counted as an ME Elective Course.

4 ME 112, ME 131A, and ME 140 or ME 141, together fulfill the WIM
   requirement.

University requirements for a Bachelor of Science degree. The program
prepares students for careers in industry and for graduate study.

Requirements

Mathematics and Science

Mathematics 20 units minimum
Recommended: one course in Statistics

Science 23 units minimum

23 units minimum: 12 units Physics and 3-5 units of an additional
science class from School of Engineering approved list, and 8 units
minimum of behavioral sciences. 1

PHYSICS 41 Mechanics 4
PHYSICS 43 Electricity and Magnetism 4
PHYSICS 45 Light and Heat 4
PSYCH 1 Introduction to Psychology 5
PSYCH or HUMBIO elective 3 3-5

Technology in Society
One course required; must be on the SoE approved TiS courses list at
<ughb.stanford.edu> the year it is taken.

Engineering Fundamentals 8 units minimum
ENGR 70A Programming Methodology 5
ENGR 40M An Intro to Making: What is EE 5
or ENGR 40A Introductory Electronics

Product Design Engineering Depth 53-56 units minimum

Three Art Studio or Computer Science courses, 100 series or higher 12
ENGR 14 Intro to Solid Mechanics 2 3
ME 80 Mechanics of Materials 4
ME 101 Visual Thinking 2 4
ME 103D Engineering Drawing and Design 3 1
ME 110 Design Sketching 2 4
ME 112 Mechanical Systems Design 4 4
ME 115A Introduction to Human Values in Design 3
ME 115B Product Design Methods 3
ME 215C Analytical Product Design 5 3
ME 203 Design and Manufacturing 3 4
ME 216A Advanced Product Design: Needfinding 4
ME 216B Advanced Product Design: Implementation 6 4
ME 216C Advanced Product Design: Implementation 6 4

1 School of Engineering approved science list available at http://
ughb.stanford.edu. PSYCH electives numbered 30-200 or
HUMBIO 82A or HUMBIO 160 are preapproved. If the Psychology
elective was taken prior to the requirement being increased to 3
units minimum in 2012-13, student may be short 1 unit in science/
behavioral science; this is approved without petition.

2 If ENGR 14 and/or ME 110, and/or ME 101 were taken prior to the
courses being offered for 3 and 2 units, depth total may be reduced
by 1-3 units with no petition required.

3 ME 103D and ME 203 should be taken concurrently.

4 ME 112 meets the Writing in the Major (WIM) requirement for
Product Design.
ME 215C is the only course that can be waived if a student takes a quarter overseas. Students should plan their overseas quarter to take place in sophomore year, or Spring Quarter of the junior year only. If the student elects to go overseas junior year, the total depth units are reduced by 3; this is approved without petition.

You may substitute ME 216B and ME 216C with ME 206A and ME 206B Design for Extreme Affordability.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years beginning in 2014-15, permits students to major in both Computer Science and one of ten Humanities majors. See the "Joint Major Program (p. 31)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

Mission

The Joint Major provides a unique opportunity to gain mastery in two disciplines: Computer Science and a selected humanities field. Unlike the double major or dual major, the Joint Major emphasizes integration of the two fields through a cohesive, transdisciplinary course of study and integrated capstone experience. The Joint Major not only blends the intellectual traditions of two Stanford departments—it does so in a way that reduces the total unit requirement for each major.

Computer Science Major Requirements in the Joint Major Program

(See the respective humanities department Joint Major Program section of this bulletin for details on humanities major requirements.)

The CS requirements for the Joint Major follow the CS-BS degree with the following exceptions:

1. Two of the depth electives are waived. The waived depth electives are listed below for each CS track.
2. The Senior Project is fulfilled with a joint capstone project. The student enrolls in CS191 or 191W (3 units) during the senior year. Depending on the X department, enrollment in an additional Humanities capstone course may also be required. But, at a minimum, 3 units of CS191 or 191W must be completed.
3. There is no double-counting of units between majors. If a course is required for both the CS and Humanities majors, the student will work with one of the departments to identify an additional course - one which will benefit the academic plan - to apply to that major's total units requirement.
4. For CS, WIM can be satisfied with CS181W or CS191W.

Depth Electives for CS Tracks for students completing a Joint Major:

Artificial Intelligence Track:
One Track Elective (rather than three).

Biocomputation Track:
One course from Note 3 of the Department Program Sheet, plus one course from Note 4 of the Program Sheet.

Computer Engineering Track:
- EE 108A and 108B
- One of the following: EE 101A, 101B, 102A, 102B
- Satisfy the requirements of one of the following concentrations:
  1. Digital Systems Concentration: CS 140 or 143; EE 109, 271; plus one of CS 140 or 143 (if not counted above), 144, 149, 240E, 244; EE 273, 282
  2. Robotics and Mechatronics Concentration: CS 205A, 223A; ME 210; ENGR 105
  3. Networking Concentration: CS 140, 144; plus two of the following, CS 240, 240E, 244, 244B, 244E, 249A, 249B, EE 179, EE 276

Graphics Track:
No Track Electives required (rather than two)

HCI Track:
No Interdisciplinary HCI Electives required

Information Track:
One Track Elective (rather than three)

Systems Track:
One Track Elective (rather than three)

Theory Track:
One Track Elective (rather than three)

Unspecialized Track:
No Track Electives required (rather than two)

Individually Designed Track:
Proposals should include a minimum of five (rather than seven) courses, at least four of which must be CS courses numbered 100 or above.

Declaring a Joint Major Program

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (https://stanford.box.com/change-UG-program) The Major-Minor and Multiple Major Course Approval Form (https://stanford.box.com/MajMin-MultMaj) is required for graduation for students with a joint major.

Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (https://stanford.box.com/change-UG-program) Students may also consult the Student Services Center (http://studentservicescenter.stanford.edu) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

Minor in the School of Engineering

An undergraduate minor in some Engineering programs may be pursued by interested students; see the Handbook for Undergraduate Engineering Programs, or consult with a department's undergraduate program representative or the Office of Student Affairs, Huang Engineering Center, Suite 135.
General requirements and policies for a minor in the School of Engineering are:

1. A set of courses totaling not less than 20 and not more than 36 units, with a minimum of six courses of at least 3 units each. These courses must be taken for a letter grade except where letter grades are not offered, and a minimum GPA of 2.0 within the minor course list must be maintained (departments may require a higher GPA if they choose).

2. The set of courses should be sufficiently coherent as to present a body of knowledge within a discipline or subdiscipline.

3. Prerequisite mathematics, statistics, or science courses, such as those normally used to satisfy the school’s requirements for a department major, may not be used to satisfy the requirements of the minor; conversely, engineering courses that serve as prerequisites for subsequent courses must be included in the unit total of the minor program.

4. Courses used for the major and/or minor core must not be duplicated within any other of the student’s degree programs; that is, students may not overlap (double-count) courses for completing core major and minor requirements.

Departmentally based minor programs are structured at the discretion of the sponsoring department, subject only to requirements 1, 2, 3, and 4 above. Interdisciplinary minor programs may be submitted to the Undergraduate Council for approval and sponsorship. A general Engineering minor is not offered.

Aeronautics and Astronautics (AA) Minor

The Aero/Astro minor introduces undergraduates to the key elements of modern aerospace systems. Within the minor, students may focus on aircraft, spacecraft, or disciplines relevant to both. The course requirements for the minor are described in detail below. If any core classes (aside from ENGR 21; see footnote) are part of student’s major or other degree program, the AA adviser can help select substitute courses to fulfill the AA minor requirements; no double counting allowed. All courses taken for the minor must be taken for a letter grade if that option is offered by the instructor. Minimum GPA for all minor courses combined is 2.0.

The following core courses fulfill the minor requirements:

**AA Core**

<table>

Total Units: 36

Civil Engineering (CE) Minor

The civil engineering minor is intended to give students a focused introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering and Management, and Structural and Geotechnical Engineering. Students interested in Environmental and Water Studies should refer to the Environmental Systems Engineering minor.

The minimum prerequisite for a civil engineering minor is MATH 19 Calculus (or MATH 20 Calculus or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 19 Calculus (or MATH 20 Calculus or MATH 21 Calculus) and a course in Statistics. Students should recognize that a minor in civil engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining a civil engineering minor, and the field itself is so broad, no single set of course requirements will be appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information, including example minor programs, are provided on the CEE web site (http://cee.stanford.edu/prospective/undergrad/minor_overview.html) and in Chapter 6 of the Handbook for Undergraduate Engineering Programs (http://ughb.stanford.edu).

General guidelines are:

1. A civil engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes...
must complete a minimum of 23-25 units, as follows:

The options for completing a minor in EE are outlined below. Students must consult the appropriate adviser when developing their minor program, and obtain approval of the finalized study list from them.

**Computer Science (CS) Minor**
The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51 (or CME 100).

**Introductory Programming (AP Credit may be used to fulfill this requirement):**
- CS 106B Programming Abstractions 5
- CS 106X Programming Abstractions (Accelerated)

**Core:***
- CS 103 Mathematical Foundations of Computing 5
- CS 107 Computer Organization and Systems 5
- CS 107E Computer Systems from the Ground Up
- CS 109 Introduction to Probability for Computer Scientists 5

**Electives (choose two courses from different areas):**
- Artificial Intelligence—
  - CS 124 From Languages to Information 4
  - CS 221 Artificial Intelligence: Principles and Techniques 4
- Human-Computer Interaction—
  - CS 147 Introduction to Human-Computer Interaction Design 4
- Software—
  - CS 108 Object-Oriented Systems Design 4
  - CS 110 Principles of Computer Systems 5
- Systems—
  - CS 140 Operating Systems and Systems Programming 4
  - CS 140E Operating systems design and implementation
  - CS 143 Compilers 4
  - CS 144 Introduction to Computer Networking 4
  - CS 145 Introduction to Databases 4
  - CS 148 Introduction to Computer Graphics and Imaging 4
- Theory—
  - CS 154 Introduction to Automata and Complexity Theory 4
  - CS 157 Logic and Automated Reasoning 3
  - CS 161 Design and Analysis of Algorithms 5

**Units**

Note: for students with no programming background and who begin with CS 106A, the minor consists of seven courses.

**Electrical Engineering (EE) Minor**
The options for completing a minor in EE are outlined below. Students must complete a minimum of 23-25 units, as follows:

**Units**

<table>
<thead>
<tr>
<th>Option</th>
<th>Courses</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>Option I:</td>
<td>EE 101A Circuits I</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>EE 101B Circuits II</td>
<td>5</td>
</tr>
<tr>
<td>Option II:</td>
<td>EE 102A Signal Processing and Linear Systems I</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>EE 102B Signal Processing and Linear Systems II</td>
<td>5</td>
</tr>
<tr>
<td>Option III:</td>
<td>EE 103 Introduction to Matrix Methods</td>
<td>5</td>
</tr>
<tr>
<td>Option IV:</td>
<td>EE 108 Digital System Design</td>
<td>5</td>
</tr>
<tr>
<td></td>
<td>EE 180 Digital Systems Architecture</td>
<td>5</td>
</tr>
</tbody>
</table>

In addition, four letter-graded EE courses at the 100-level or higher must be taken (12 units minimum). CS 107 is required as a prerequisite for EE 180, but can count as one of the four classes.

**Environmental Systems Engineering (EnvSE) Minor**
The Environmental Systems Engineering minor is intended to give students a focused introduction to one or more areas of Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Systems Engineering minor is MATH 19 Calculus (or MATH 20 Calculus or MATH 21 Calculus); additionally, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. Students should recognize that a minor in Environmental Systems Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an Environmental Systems Engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information on preparing a minor program is available in the Undergraduate Engineering Handbook (http://web.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Handbooks).

**General guidelines are—**

- An Environmental Systems Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
- The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are available on the CEE web site (https://cee.stanford.edu/academics/undergraduate-programs/minor).

Professor Nicholas Ouellette (nto@stanford.edu) is the CEE undergraduate minor adviser in Environmental Systems Engineering. Students must consult with Professor Ouellette (https://
Management Science and Engineering (MS&E) Minor

The following courses are required to fulfill the minor requirements:

**Background requirements (two courses)**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CME 100: Vector Calculus for Engineers</td>
<td>5</td>
</tr>
<tr>
<td>or MATH 51: Linear Algebra and Differential Calculus of Several Variables</td>
<td></td>
</tr>
<tr>
<td>CS 106A: Programming Methodology</td>
<td>5</td>
</tr>
</tbody>
</table>

**Minor requirements (seven courses, letter-graded)**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS&amp;E 111: Introduction to Optimization</td>
<td>3-4</td>
</tr>
<tr>
<td>or MS&amp;E 111X: Introduction to Optimization (Accelerated)</td>
<td></td>
</tr>
<tr>
<td>MS&amp;E 120: Probabilistic Analysis</td>
<td>5</td>
</tr>
<tr>
<td>MS&amp;E 121: Introduction to Stochastic Modeling</td>
<td>4</td>
</tr>
<tr>
<td>MS&amp;E 125: Introduction to Applied Statistics</td>
<td>4</td>

<td>4</td>
</tr>
<tr>
<td>Electives (select any two 100- or 200-level MS&amp;E courses)</td>
<td>6</td>
</tr>
</tbody>
</table>

**Recommended courses**

In addition to the required background and minor courses, it is recommended that students also take the following courses.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 50: Economic Analysis I</td>
<td>5</td>
</tr>
<tr>
<td>MS&amp;E 140: Accounting for Managers and Entrepreneurs (may be used as one of the required electives above)</td>
<td>2-4</td>
</tr>
<tr>
<td>or MS&amp;E 140X: Financial Accounting Concepts and Analysis</td>
<td></td>
</tr>
</tbody>
</table>

Materials Science and Engineering (MATSCI) Minor

A minor in Materials Science and Engineering allows interested students to explore the role of materials in modern technology and to gain an understanding of the fundamental processes that govern materials behavior.

The following courses fulfill the minor requirements:

**Units**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATSCI 163: Mechanical Behavior Laboratory</td>
<td></td>
</tr>
<tr>
<td>MATSCI 164: Electronic and Photonic Materials and Devices Laboratory</td>
<td></td>
</tr>
<tr>
<td>MATSCI 165: Nanoscale Materials Physics Computation Laboratory</td>
<td></td>
</tr>
<tr>
<td>MATSCI 190: Organic and Biological Materials</td>
<td></td>
</tr>
<tr>
<td>MATSCI 192: Materials Chemistry</td>
<td></td>
</tr>
<tr>
<td>MATSCI 193: Atomic Arrangements in Solids</td>
<td></td>
</tr>
<tr>
<td>MATSCI 194: Thermodynamics and Phase Equilibria</td>
<td></td>
</tr>
<tr>
<td>MATSCI 195: Waves and Diffraction in Solids</td>
<td></td>
</tr>
<tr>
<td>MATSCI 196: Defects in Crystalline Solids</td>
<td></td>
</tr>
<tr>
<td>MATSCI 197: Rate Processes in Materials</td>
<td></td>
</tr>
<tr>
<td>MATSCI 198: Mechanical Properties of Materials</td>
<td></td>
</tr>
<tr>
<td>MATSCI 199: Electronic and Optical Properties of Solids</td>
<td></td>
</tr>
</tbody>
</table>

Total Units: 28

Mechanical Engineering (ME) Minor

The following courses fulfill the minor requirements:

**Units**

<table>
<thead>
<tr>
<th>Course</th>

</tbody>
</table>

Total units: 25-26

---

* This minor aims to expose students to the breadth of ME in terms of topics and analytic and design activities. Prerequisites: MATH 19 Calculus, MATH 20 Calculus, MATH 21 Calculus, and PHYSICS 41 Mechanics.
** Prerequisites: MATH 19 Calculus, MATH 20 Calculus, MATH 21 Calculus, MATH 51 Linear Algebra and Differential Calculus of Several Variables (or CME 100 Vector Calculus for Engineers) and PHYSICS 41 Mechanics.

*** This minor aims to expose students to design activities supported by analysis. Prerequisites: MATH 19 Calculus, MATH 20 Calculus, MATH 21 Calculus, PHYSICS 42 Classical Mechanics Laboratory, and PHYSICS 41 Mechanics.

Master of Science in the School of Engineering

The M.S. degree is conferred on graduate students in engineering according to the University regulations stated in the "Graduate Degrees (p. 50)" section of this bulletin, and is described in the various department listings. A minimum of 45 units is usually required in M.S. programs in the School of Engineering. The presentation of a thesis is not a school requirement. Further information is found in departmental listings.

Master of Science in Engineering

The M.S. in Engineering is available to students who wish to follow an interdisciplinary program of study that does not conform to a normal graduate program in a department.

Each student's program is administered by the particular department in which it is lodged and must meet the standard of quality of that department. Transfer into this program is possible from any graduate program by application through the appropriate department; the department then recommends approval to the Office of Student Affairs in the School of Engineering. The application should be submitted before completing 18 units of the proposed program; it should include a statement describing the objectives of the program, the coherence of the proposed course work, and why this course of study cannot conform to existing graduate programs. Normally, it would include the approval of at least one faculty member willing to serve as adviser. (A co-advising team may be appropriate for interdisciplinary programs.) Each student's program is administered by the particular department in which it is lodged and must meet the standard of quality of that department. The actual transfer is accomplished through the Graduate Authorization Petition process.

There are three school requirements for the M.S. degree in Engineering:

1. The student’s program must be a coherent one with a well-defined objective and must be approved by a department within the school which has experience with graduate-level teaching and advising in the program area.
2. The student’s program must include at least 21 units of courses within the School of Engineering with catalog numbers of 200 or above in which the student receives letter grades.
3. The program must include a total of at least 45 units.

Departments may have additional requirements or expectations for programs of study which they would recommend for this degree; further information may be found in departmental listings or handbooks.

The M.S. in Engineering is rarely pursued as a coterminal program, and potential coterminals are encouraged to explore the range of master’s options in the departments and interdisciplinary programs. In the unusual circumstance of a coterminal application to the M.S. in Engineering, the application process should be the same as described above, using either the Graduate Authorization Petition in Axess (for coterminal students who want to transfer between MS programs) or the Application for Admission to Coterminal Masters’ Program (http://registrar.stanford.edu/pdf/CotermApplic.pdf) (for students who have not yet been admitted to a master’s program). The policy for transferring courses taken as an undergraduate prior to coterm admission to the M.S. in Engineering corresponds to the policy of the particular department in which the student’s program is lodged and administered. A clear statement of the department’s coterminal policy, and how it applies to the applicant within the Master of Science in Engineering program, should be added to the application materials.

Honors Cooperative Program

Industrial firms, government laboratories, and other organizations may participate in the Honors Cooperative Program (HCP), a program that permits qualified engineers, scientists, and technology professionals admitted to Stanford graduate degree programs to register for Stanford courses and obtain the degree on a part-time basis. In many areas of concentration, the master’s degree can be obtained entirely online.

Through this program, many graduate courses offered by the School of Engineering on campus are made available through the Stanford Center for Professional Development (SCPD). SCPD delivers more than 250 courses a year online. For HCP employees who are not part of a graduate degree program at Stanford, courses and certificates are also available through a non-degree option (NDO) and a non-credit professional education program. Non-credit short courses may be customized to meet a company’s needs. For a full description of educational services provided by SCPD, see http://scpd.stanford.edu; call (650) 204-3984; fax (650) 725-2868; or email scpd-customer-service@stanford.edu.

Engineer Degree in the School of Engineering

The degree of Engineer is intended for students who want additional graduate training beyond that offered in an M.S. program. The program of study must satisfy the student's department and must include at least 90 units beyond the B.S. degree. The presentation of a thesis is required. The University regulations for the Engineer degree are stated in the "Graduate Degrees (p. 50)" section of this bulletin, and further information is available in the individual departmental sections of this bulletin.

Doctor of Philosophy in the School of Engineering

Programs leading to the Ph.D. degree are offered in each of the departments of the school. University regulations for the Ph.D. are given in the "Graduate Degrees (p. 50)" section of this bulletin. Further information is found in departmental listings.

Dean: Jennifer Widom

Senior Associate Deans: Stacey Bent (Faculty and Academic Affairs), Laura L. Breyfogle (External Relations), Scott Calvert (Administration), Thomas Kenny (Student Affairs)

Associate Dean: Noé P. Lozano (Diversity Programs), Kirsti Copeland (Student Affairs)

Assistant Dean: Sally Gressens (Graduate Student Affairs)

Faculty Teaching General Engineering Courses

Professors: Juan Alonso, Mark Cappelli, Ashish Goel, Chaitan Khosla, Chris Gerdes, Mark Horowitz, Roger Howe, Ellen Kuhl, Allison Okamura, Peter Pinsky, Jim Plummer, Stephen M. Rock, Bernard Roth, Sheri Sheppard, Robert Sinclair, Simon Wong, Yinyu Ye

Associate Professors: Eric Darve, Chuck Eesley, Sarah Heilshorn, W. Matthias Ihme, Michael Lepech, Jan Liphardt, Nick Melosh, Amin Saberi, Thomas Jaramillo,
Assistant Professors: Sindy Tang

Professors (Teaching): Thomas H. Byers, Robert McGinn, Mehran Sahami

Senior Lecturers: Vadim Khayms

Lecturers: Jeff Epstein, Christopher Gregg, Kelly Harrison, David Jaffe, Victoria Kirst, Royal Kopperud, Hung Le, Cynthia Bailey Lee, Mary McDevitt, Chris Piech, Marty Stepp, Matt Vassar

Professor of the Practice: Tina Seelig

Overseas Studies Courses in Engineering

The Bing Overseas Studies Program (http://bosp.stanford.edu) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (https://undergrad.stanford.eduprograms/bosp/explore/search-courses) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

AERONAUTICS AND ASTRONAUTICS

Courses offered by the Department of Aeronautics and Astronautics are listed under the subject code AA on the [Stanford Bulletin's ExploreCourses](https://explorecourses.stanford.edu/search?filter-term-Autumn=on&filter-term-Summer=on&page=0&q=AA) website.

The Department of Aeronautics and Astronautics prepares students for professional positions in industry, government, and academia by offering a comprehensive program of undergraduate and graduate teaching and research. In this broad program, students have the opportunity to learn and integrate multiple engineering disciplines. The program emphasizes structural, aerodynamic, guidance and control, and propulsion problems of aircraft and spacecraft. Courses in the teaching program lead to the degrees of Bachelor of Science, Master of Science, Engineer, and Doctor of Philosophy. Undergraduates and doctoral students in other departments may also elect a minor in Aeronautics and Astronautics.

Requirements for all degrees include courses on basic topics in Aeronautics and Astronautics, as well as in mathematics, and related fields in engineering and the sciences.

The current research and teaching activities cover a number of advanced fields, with emphasis on:

- Aeroelasticity and Flow Simulation
- Aircraft Design, Performance, and Control
- Applied Aerodynamics
- Autonomy
- Computational Aero-Acoustics
- Computational Fluid Dynamics
- Computational Mechanics and Dynamical Systems
- Control of Robots, including Space and Deep-Underwater Robots
- Conventional and Composite Materials and Structures
- Decision Making under Uncertainty
- Direct and Large-Eddy Simulation of Turbulence
- High-Lift Aerodynamics
- Hybrid Propulsion
- Hypersonic and Supersonic Flow
- Micro and Nano Systems and Materials
- Multidisciplinary Design Optimization
- Navigation Systems (especially GPS)
- Optimal Control, Estimation, System Identification
- Sensors for Harsh Environments
- Space Debris Characterization
- Space Environment Effects on Spacecraft
- Space Plasmas
- Spacecraft Design and Satellite Engineering
- Turbulent Flow and Combustion

Mission of the Undergraduate Program in Aeronautics and Astronautics

The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, autonomous systems, computational engineering, embedded programming, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, autonomy, robotics, unmanned aerial vehicles, drones, space exploration, air and space-based telecommunication industries, computational engineering, teaching, research, military service, and many related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Aeronautics and Astronautics.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work which provides a solid grounding in the basic disciplines, including fluid mechanics, dynamics and control, propulsion, structural mechanics, and applied or computational mathematics, and course work or supervised research which provides depth and breadth in the student’s area of specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Aeronautics and Astronautics and related fields.

Graduate Programs in Aeronautics and Astronautics

Admission

To be eligible to apply for admission to the department, a student must have a bachelor’s degree in engineering, physical science, mathematics, or an acceptable equivalent. Students who have not yet received a master’s degree in a closely allied discipline will be considered for admission to the master’s program; eligibility for the Ph.D. program is considered after the master’s year (see “Doctor of Philosophy”). Applications for admission with financial aid (fellowships or assistantships) or without financial aid must be received and completed by December 5 for the next Autumn Quarter.

Information about admission to the Honors Cooperative Program is included in the “School of Engineering (p. 237)” section of this bulletin. The department considers HCP applications for Winter or Spring quarters as well as for Autumn Quarter; prospective applicants may contact the department’s student services office with questions.

Further information and application forms for all graduate degree programs may be obtained from Graduate Admissions, the Registrar’s Office, http://gradadmissions.stanford.edu.

Transfer Credits

The number of transfer credits allowed for each degree (Engineer and Ph.D.) is delineated in the “Graduate Degrees (p. 62)” section of this bulletin; transfer credit is not accepted for the master’s degree. Transfer credit is allowed only for courses taken as a graduate student, after receiving a bachelor’s degree, in which equivalence to Stanford courses is established and for which a grade of 'B' or better has been awarded. Transfer credits, if approved, reduce the total number of Stanford units required for a degree.
Fellowships and Assistantships
Fellowships and course or research assistantships are available to qualified graduate students. Fellowships sponsored by Gift Funds, Stanford University, and Industrial Affiliates of Stanford University in Aeronautics and Astronautics provide grants to several first-year students for up to five quarters to cover tuition and living expenses. Stanford Graduate Fellowships, sponsored by the University, provide grants for up to three full years of study and research; each year, the department is invited to nominate several outstanding doctoral or predoctoral students for these prestigious awards. Students who have excelled in their master’s-level course work at Stanford are eligible for course assistantships in the department; those who have demonstrated research capability are eligible for research assistantships from individual faculty members. Students may also hold assistantships in other departments if the work is related to their academic progress; the criteria for selecting course or research assistants are determined by each hiring department. A standard, 20 hours/week course or research assistantship provides a semi-monthly salary and an 8-10 unit tuition grant per quarter. Research assistants may be given the opportunity of additional summer employment. They may use their work as the basis for a dissertation or Engineer’s thesis.

Aeronautics and Astronautics Facilities
The work of the department is centered in the William F. Durand Building for Space Engineering and Science. This 120,000 square foot building houses advanced research and teaching facilities and concentrates in one complex the Department of Aeronautics and Astronautics. The Durand Building also houses faculty and staff offices and several conference rooms.

Through the department’s close relations with nearby NASA-Ames Research Center, students and faculty have access to one of the best and most extensive collections of experimental aeronautical research facilities in the world, as well as the latest generation of supercomputers.

General Information
Further information about the facilities and programs of the department is available at http://aa.stanford.edu, or from the department’s student services office.

The department has a student branch of the American Institute of Aeronautics and Astronautics, which sponsors programs and speakers covering aerospace topics and social events. It also conducts visits to nearby research, government, and industrial facilities, and sponsors a Young Astronauts Program in the local schools.

Aeronautics and Astronautics (AA)
Mission of the Undergraduate Program in Aeronautics and Astronautics
The mission of the undergraduate program in Aeronautics and Astronautics Engineering is to provide students with the fundamental principles and techniques necessary for success and leadership in the conception, design, implementation, and operation of aerospace and related engineering systems. Courses in the major introduce students to engineering principles. Students learn to apply this fundamental knowledge to conduct laboratory experiments, and aerospace system design problems. Courses in the major include engineering fundamentals, mathematics, and the sciences, as well as in-depth courses in aeronautics and astronautics, dynamics, mechanics of materials, autonomous systems, computational engineering, embedded programming, fluids engineering, and heat transfer. The major prepares students for careers in aircraft and spacecraft engineering, autonomy, robotics, unmanned aerial vehicles, drones, space exploration, air and space-based telecommunication industries, computational engineering, teaching, research, military service, and other related technology-intensive fields.

Completion of the undergraduate program in Aeronautics and Astronautics leads to the conferral of the Bachelor of Science in Aeronautics and Astronautics.

Aero/Astro Depth Requirements
The following core courses fulfill the minor requirements:

### Aero/Astro Core

- **12 Core Units, 24 Total Program Units**
- ENGR 21 Engineering of Systems $^2$
- AA 100 Introduction to Aeronautics and Astronautics
- AA 131 Space Flight
- AA 141

### Aero/Astro Electives

Choose 4 courses
- AA 101 Introduction to Aero Fluid Mechanics
- AA 102 Introduction to Applied Aerodynamics
- AA 103 Air and Space Propulsion
- AA 111 Introduction to Aerospace Computational Engineering
- AA 135 Introduction to Space Policy
- AA 151 Lightweight Structures
- AA 156 Mechanics and Composites
- AA 171 Autonomous Systems
- AA 173 Flight Mechanics and Controls
- AA 175 Embedded Programming
- AA 272C Global Positioning Systems
- AA 279A Space Mechanics
- AA 199 Independent Study in Aero/Astro
- MS&E 178 The Spirit of Entrepreneurship
- MS&E 178 Directed Research and Writing in Aero/Astro
- ENGR 105 Feedback Control Design

### Aero/Astro Focus Electives

15 units minimum
- AA 102 Introduction to Applied Aerodynamics
- AA 103 Air and Space Propulsion
- AA 111 Introduction to Aerospace Computational Engineering
- AA 135 Introduction to Space Policy
- AA 151 Lightweight Structures
- AA 156 Mechanics and Composites
- AA 173 Flight Mechanics and Controls
- AA 175 Embedded Programming
- AA 272C Global Positioning Systems
- AA 279A Space Mechanics
- AA 199 Independent Study in Aero/Astro
- MS&E 178 The Spirit of Entrepreneurship

### Aero/Astro Suggested Courses (not required)

- AA 149 Operation of Aerospace Systems

### Aero/Astro Capstone Requirement

7 units minimum
- AA 123A Air Capstone I, satisfies the Writing in the Major requirement,
  (WIM) $^1$
- AA 123B Air Capstone II $^1$
- AA 124A Space Capstone I, satisfies the Writing in Major requirement,
  (WIM) $^1$
- AA 124B Space Capstone II $^1$

For additional information and sample programs see the Handbook for Undergraduate Engineering (http://ughb.stanford.edu) and the Aeronautics and Astronautics Undergraduate Program Sheet (https://stanford.box.com/s/e61zom3k9zbihbqls queer2skeon0nm).

All courses taken for the major must be taken for a letter grade if that option is offered by the instructor.

Minimum Combined GPA for all courses in Engineering Topics (Engineering Fundamentals and Depth courses) is 2.0.
necessary to take certain prerequisite courses, which may lengthen the
time required to obtain the master’s degree.

The Master of Science (M.S.) program is a terminal degree program. It is
based on the completion of lecture courses focused on a theme within
the discipline of Aeronautics and Astronautics engineering. No thesis is
required. No research is required.

Grade Point Averages
A minimum grade point average (GPA) of 2.75 is required to fulfill the
department’s master’s degree requirements. A minimum GPA of 3.5
is required for eligibility to attempt the Ph.D. qualifying examination.
Students must also meet the University’s quarterly academic
requirements for graduate students as described in the “Degree Progress
(p. 55)” section of this bulletin and in the “Satisfactory Progress” section
of the Guide to Graduate Studies in Aeronautics and Astronautics. All
courses (excluding seminars) used to satisfy the requirements for basic
courses, mathematics and technical electives must be taken for a letter
grade. Insufficient grade points on which to base the GPA may delay
expected degree conferral or result in refusal of permission to take the
qualifying examinations.

Course Requirements
The master’s degree program requires 45 quarter units of course work,
which must be taken at Stanford. The course work is divided into four
categories:

• Basic Courses
• Mathematics Courses
• Technical Electives
• Other Electives

Basic Courses
Master’s degree candidates must select eight courses as follows:

(I) Five courses in the basic areas of Aeronautics and Astronautics
(one in each area):

<table>
<thead>
<tr>
<th>Unit</th>
<th>Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Fluids</td>
</tr>
<tr>
<td>3</td>
<td>Structures</td>
</tr>
<tr>
<td>3</td>
<td>Guidance and Control</td>
</tr>
<tr>
<td>3</td>
<td>ENGR 105 Feedback Control Design</td>
</tr>
<tr>
<td>3</td>
<td>ENGR 205 Introduction to Control Design Techniques</td>
</tr>
<tr>
<td>3</td>
<td>Propulsion</td>
</tr>
<tr>
<td>3</td>
<td>AA 283 Aircraft and Rocket Propulsion</td>
</tr>
<tr>
<td>3</td>
<td>Experimentation/Design Requirements</td>
</tr>
</tbody>
</table>

(II) Three courses (one each from three of the four areas below)

<table>
<thead>
<tr>

<td>Propulsion</td>
</tr>
<tr>
<td>3</td>
<td>AA 283 Aircraft and Rocket Propulsion</td>
</tr>
<tr>
<td>3</td>
<td>Experimentation/Design Requirements</td>
</tr>
</tbody>
</table>

Course Waivers
Waivers of the basic courses required for the M.S. degree in Aeronautics
and Astronautics can only be granted by the instructor of that course. Students who believe that they have had a substantially equivalent
course at another institution should consult with the course instructor
to determine if they are eligible for a waiver, and with their adviser to
judge the effect on their overall program plans. To request a waiver,
students should fill out a Petition for Waiver form (reverse side of the
department’s program proposal) and have it approved by the instructor
and their adviser. One additional technical elective must be added for
each basic course that is waived.

Mathematics Courses
M.S. candidates are expected to exhibit competence in applied
mathematics. Students meet this requirement by taking two courses, for
a minimum of 6 units, of either advanced mathematics offered by the
Mathematics Department or technical electives that strongly emphasize
applied mathematics. Common choices include:

• AA 203 Introduction to Optimal Control and Dynamic Optimization
• AA 212 Advanced Feedback Control Design
• AA 214A Numerical Methods in Engineering and Applied Sciences
• AA 214B Numerical Methods for Compressible Flows
• AA 214C Numerical Computation of Viscous Flow
• AA 215A Advanced Computational Fluid Dynamics
• AA 218 Introduction to Symmetry Analysis
• AA 222 Engineering Design Optimization
• AA 228 Decision Making under Uncertainty
• AA 229 Advanced Topics in Sequential Decision Making
• AA 242B Mechanical Vibrations

See the list of mathematics courses under Related Courses
(http://exploredegrees.stanford.edu/aeronauticsandastronautics/
#relatedcoursessentext) tab for additional suggestions, which includes all
courses in the Mathematics Department numbered 200 or above.

A maximum of three independent study/research units (AA 290 or
independent study in another department) may count toward your M.S.
program. If you fulfill your experimentation/design requirement with a
course other than AA 290 (or equivalent from another department), it is
possible to count AA 290 as a technical or free elective.

Technical Electives
Students, in consultation with their adviser, select at least four courses* from
among the graduate-level courses, totaling at least 12 units, from
departments in the School of Engineering and related science
departments. These courses should be taken for a letter grade; the
student should not elect the credit/no-credit option for any course except
free elective.

*Up to three seminar units may count toward an M.S. program, and is
counted as one technical elective. At least three additional graduate
courses offered in Engineering or related math/science departments
should be taken to meet the technical elective section requirement.

Other Electives
It is recommended that all candidates enroll in a humanities or social
sciences course to complete the 45-unit requirement. Practicing courses

<table>
<thead>
<tr>
<th>Unit</th>
<th>Course</th>

</tr>
</tbody>
</table>

One course selected from AA courses numbered 200 and above, excluding seminars and independent research.
in, for example, art, music, and physical education do not qualify in this
category. Language courses may qualify.

### Coterminal Master’s Program in Aeronautics and Astronautics

This program allows Stanford undergraduates an opportunity to work
simultaneously toward a B.S. degree and an M.S. in Aeronautics and
Astronautics. Stanford undergraduates who wish to continue their
studies for the master of science degree in the coterminal program must
have earned a minimum of 120 units towards graduation. This includes
allowable Advanced Placement (AP) and transfer credit.

The department-specific AA coterminal program application, which
includes information and deadlines, can be obtained from the AA student
services office (https://aa.stanford.edu/academics/student-services-
office). A completed application (including letters of recommendation,
transcripts and GRE scores) must be received no later than the quarter
prior to the expected completion of the undergraduate degree. Admission
is granted or denied through the departmental faculty admissions
committee. Stanford undergraduates interested in learning more
about receiving an AA master’s degree as a coterm student should
review the information on the University Registrar’s web site (https://
registrar.stanford.edu/students/coterminal-degree-programs) and visit
the AA student services office (https://aa.stanford.edu/academics/
student-services-office).

### University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all
master’s degree requirements as described in this bulletin. University
requirements for the coterminal master’s degree are described in the
“Coterminal Master’s Program (p. 46)” section. University requirements
for the master’s degree are described in the “Graduate Degrees (p. 50)”
section of this bulletin.

After accepting admission to this coterminal master’s degree program,
students may request transfer of courses from the undergraduate to the
graduate career to satisfy requirements for the master’s degree. Transfer
of courses to the graduate career requires review and approval of both
the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken three quarters prior to the first
graduate quarter, or later, are eligible for consideration for transfer to
the graduate career. No courses taken prior to the first quarter of the
sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been
conferred.

The University requires that the graduate adviser be assigned in the
student’s first graduate quarter even though the undergraduate career
may still be open. The University also requires that the Master’s Degree
Program Proposal be completed by the student and approved by the
department by the end of the student’s first graduate quarter.

### The Honors Cooperative Program

The Honors Cooperative Program (HCP) makes it possible for
academically qualified engineers and scientists in nearby companies
to be part-time master’s students in Aeronautics and Astronautics
while continuing nearly full-time professional employment. Prospective
HCP students follow the same admission process and must meet the
same admission requirements as full-time master’s students. For more
information regarding the Honors Cooperative Program, see the “School
of Engineering (p. 237)” section of this bulletin.

### Master of Science in Engineering (AA)

Students whose career objectives require a more interdepartmental
or narrowly focused program than is possible in the M.S. program
in Aeronautics and Astronautics (AA) may pursue a program for an
M.S. degree in Engineering (45 units). This program is described in the
“Graduate Programs in the School of Engineering (p. ”) section of
this bulletin.

Sponsorship by the Department of Aeronautics and Astronautics in this
more general program requires that the student file a proposal before
completing 18 units of the proposed graduate program. The proposal
must be accompanied by a statement explaining the objectives of the
program and how the program is coherent, contains depth, and fulfills
a well-defined career objective. The proposed program must include at
least 12 units of graduate-level work in the department and meet rigorous
standards of technical breadth and depth comparable to the regular AA
Master of Science program. The grade and unit requirements are the
same as for the M.S. degree in Aeronautics and Astronautics.

### Engineer in Aeronautics and Astronautics

The degree of Engineer represents an additional year (or more) of study
beyond the M.S. degree and includes a research thesis. The program
is designed for students who wish to do professional engineering work
upon graduation and who want to engage in more specialized study than
is afforded by the master’s degree alone. It is expected that full-time
students will be able to complete the degree within two years of study
after the master’s degree.

The University’s basic requirements for the degree of Engineer are
outlined in the “Graduate Degrees (p. 50)” section of this bulletin. The
following are department requirements.

The candidate’s prior study program should have fulfilled the
department’s requirements for the master’s degree or a substantial
equivalent. Beyond the master’s degree, a total of 45 units of work is
required, including a thesis and a minimum of 21 units of courses chosen
as follows:

1. 21 units of approved technical electives, of which 6 are in
   mathematics or applied mathematics. See the list of mathematics
courses under Related Courses tab above. All courses in the
   Mathematics Department numbered 200 or above are included.
   The remaining 15 units are chosen in consultation with the adviser,
   and represent a coherent field of study related to the thesis topic.
   Suggested fields include: (a) acoustics, (b) aerospace structures,
   (c) aerospace systems synthesis and design, (d) analytical and
   experimental methods in solid and fluid mechanics, (e) computational
   fluid dynamics, and (f) guidance and control.

2. The remaining 24 units may be thesis, research, technical courses, or
   free electives.

Candidates for the degree of Engineer are expected to have a minimum
grade point average (GPA) of 3.0 for work in courses beyond those
required for the master’s degree. All courses except seminars and
directed research should be taken for a letter grade.

### Engineer’s thesis

For specific information on the format and deadlines for submission
of theses, please check with the Graduate Degree Progress Office. The
department recommends that students follow the format defined in the
handbook Directions for Preparing Doctoral Dissertations (https://
studentaffairs.stanford.edu/registrar/students/dissertation-thesis),
available in the Graduate Degree Progress Office. Note: the advisor must
sign the thesis before the filing deadline, which is generally the last day of
classes during the graduation quarter.
Doctor of Philosophy in Aeronautics and Astronautics

The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees (p. 50)” section of this bulletin.

Department requirements are stated below. Applicants who have received their M.S. from other institutions may apply directly to the Ph.D. program. Students who are currently pursuing the M.S. in our department and wish to continue for the Ph.D. should submit a graduate program authorization petition form online through Axess at the beginning of their last quarter in the master’s program.

Before beginning dissertation research for the Ph.D. degree, a student must pass the departmental qualifying examination. A student must meet the following conditions by the appropriate deadline to be able to take the qualifying examination:

1. 30 units of master’s course work completed in our department. A student who has completed fewer than 30 units may petition to take the qualifying examination.
2. Stanford graduate GPA of 3.5 or higher.
3. Investigation of a research problem, under the direction of a faculty member who evaluates this work as evidence of the potential for doctoral research. The minimum requirement for taking the qualifying examination is to complete 3 units of AA 290 before the qualifying examination quarter.

Additional information about the deadlines, nature, and scope of the Ph.D. qualifying examination can be obtained from the department. Recommended courses to prepare for the qualifying examination are listed on the AA web site (http://aa.stanford.edu/academics/graduate-programs/doctoral-program). After passing the exam, the student must submit an approved program of Ph.D. course work on an Application for Candidacy for Doctoral Degree to the department’s student services office.

Course Requirements

Each individual Ph.D. program in Aeronautics and Astronautics, designed by the student in consultation with the adviser, should represent a strong and cohesive program reflecting the student’s major field of interest. A total of 90 units of credit is required beyond the M.S. Of these 90 units, a minimum of 27 must be formal course work (excluding research, directed study and seminars), consisting primarily of graduate courses in engineering and the pertinent sciences. The remainder of the 90 units may be in the form of either Ph.D. dissertation units or free electives. For students who elect a minor in another department, a maximum of 9 units from the minor program may be included in the 27 units of formal course work; the remaining minor units may be considered free electives and are included in the 90 unit total required for the AA Ph.D. degree.

Ph.D. students in Aeronautics and Astronautics must take 9 units of mathematics courses, with at least 6 of these units from courses with numbers over 200. The AA department and other engineering departments offer many courses that have sufficient mathematical content that they may be used to satisfy the mathematics requirement. See the list of mathematics courses under Related Courses (p. 245) tab for suggestions. Others may be acceptable if approved by the adviser and the AA Student Services Office. University requirements for continuous registration apply to doctoral students for the duration of the degree.

Grade Point Average

A minimum grade point average (GPA) of 3.0 is required to fulfill the department’s Ph.D. It is incumbent upon Ph.D. students to request letter grades in all courses listed on the Application for Candidacy form.

Candidacy

Ph.D. students must complete the candidacy process and be admitted to candidacy by their second year of doctoral study. There are two requirements for admission to Ph.D candidacy in Aeronautics and Astronautics: students must first pass the departmental qualifying exam and must then submit an application for candidacy. The candidacy form lists the courses the student will take to fulfill the requirements for the degree. The form must include the 90 non-M.S. units required for the Ph.D.; it should be signed by the adviser and submitted to the AA student services office for the candidacy chairman’s signature. AA has a department-specific candidacy form, which may be obtained in the AA student services office. Candidacy is valid for five years; this term is not affected by leaves of absence.

Dissertation Reading Committee

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department’s Ph.D. qualifying exam. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. If the principal adviser is emeritus, there should be a non-emeritus co-adviser. It is expected that at least two members of the AA faculty be on each reading committee. If the principal research adviser is not within the AA department, then the student’s AA academic adviser should be one of those members. The initial committee, and any subsequent changes, must be approved by the department Chair.

Although all readers are usually members of the Stanford Academic Council, the department Chair may approve one non-Academic Council reader if the person brings unusual and necessary expertise to the dissertation research. Generally, this non-Academic Council reader will be a fourth reader, in addition to three Academic Council members.

University Oral Examination

The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four faculty examiners, plus a chairman). The examiners usually include the three members on the student’s Ph.D. reading committee. The chairman must not be in the same department as the student or the adviser. Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval. Forms for the University oral scheduling and a one-page dissertation abstract should be submitted to the AA student services office at least three weeks prior to the date of the oral for departmental review and approval. Students must be enrolled during the quarter when they take their University oral. If the oral takes place during the vacation time between quarters, the student must be enrolled in the prior quarter.

Doctoral Dissertation

When a student is ready for a final draft of the dissertation, the student should make an appointment to consult with the graduate degree progress officer to review the completion of the Ph.D. program and the strict formatting requirements for the dissertation. Students must submit the final version of the dissertation to the Registrar’s Office no later than the posted deadline. Note: All members of the Reading Committee must sign the dissertation before the filing deadline.
The student’s Ph.D. reading committee and University oral committee must each include at least one faculty member from Aeronautics and Astronautics.

**Ph.D. Minor in Aeronautics and Astronautics**

A student who wishes to obtain a Ph.D. minor in Aeronautics and Astronautics should consult the department office for designation of a minor adviser. A minor in Aeronautics and Astronautics may be obtained by completing 20 units of graduate-level courses in the Department of Aeronautics and Astronautics, following a program and performance approved by the department’s candidacy chair. The student’s Ph.D. reading committee and University oral committee must each include at least one faculty member from AA.

Chair: Charbel Farhat

Professors: Juan Alonso, Brian J. Cantwell, Fu-Kuo Chang, Per Enge (on leave Winter Quarter), Charbel Farhat, Ilan Kroo, Sanjay Lall, Sanjiva Lele, Stephen Rock

Research Professors: Antony Jameson

Associate Professor: Sigrid Close

Assistant Professors: Simone D’Amico, Mykel Kochenderfer, Marco Pavone, Mac Schwager, Debbie Senesky

*Courtesy Professors*: Lambertus Hesselink

*Adjunct Professors*: Andrew Barrows, G. Scott Hubbard, Arif Karabeyoglu, Abid Kemal, James Spilker

*Recalled to active duty.*

**Mathematics Courses**

Each Aero/Astro degree has a mathematics requirement, for which courses on the following list are pre-approved. (Other advanced courses may also be acceptable.) Students should consult with their advisers in selecting the most appropriate classes for their field. M.S. candidates select 2 courses; they may also use the mathematics courses listed as common choices in the master’s degree course requirements. Engineers select 3 courses; Ph.D. candidates select 3 courses, with at least 6 units from courses numbered above 200.

</table>
Courses offered by the Department of Bioengineering are listed under the subject code BIOE (https://exploreCourses.stanford.edu/search?q=BIOE&view=catalog&page=0&academicYear=&collapse=&filter-coursesstatus-Active=on&filter-departmentcode-BIOE=on&filter-catalognumber-BIOE=on) on the Stanford Bulletin's ExploreCourses web site.

Bioengineering is jointly supported by the School of Engineering and the School of Medicine. The facilities and personnel of the Department of Bioengineering are housed in the Shriram Center, James H. Clark Center, the William F. Durand Building for Space Engineering and Science, the William M. Keck Science Building, the Jerry Yang and Akiko Yamazaki Environment and Energy Building, and the Richard M. Lucas Center for Magnetic Resonance Spectroscopy and Imaging. The departmental headquarters is in the Shriram Center for Bioengineering and Chemical Engineering.

Courses in the teaching program lead to the degrees of Bachelor of Science in Bioengineering, Bachelor of Science in Electrical Engineering and the life sciences in ways that advance scientific inquiry, engineering, and computer sciences courses required of all undergraduate majors in bioengineering.

The University’s requirements for the M.S. and Ph.D. degrees are outlined in the “Graduate Degrees” section of this bulletin.

Graduate Programs in Bioengineering

The Stanford Bioengineering (BIOE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in bioengineering earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

The department offers an undergraduate major in Bioengineering leading to the B.S. degree in Bioengineering.

Learning Outcomes (Undergraduate)

The learning outcomes are used in evaluating students as well as the department's undergraduate program. The department expects undergraduate majors in the program to be able to demonstrate the ability to:

1. Apply the knowledge of mathematics, science, and engineering.
2. Design and conduct experiments, as well to analyze and interpret data.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Function on multidisciplinary teams.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Demonstrate a working knowledge of contemporary issues.
10. Apply the techniques, skills, and modern engineering tools necessary for engineering practice.
11. Transition from engineering concepts and theory to real engineering applications.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work with specialization in an area field, including biomedical computation, regenerative medicine and tissue engineering, molecular and cell bioengineering, biomedical imaging, and biomedical devices.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Bioengineering and related fields.

Mission of the Undergraduate Program in Bioengineering

The Stanford Bioengineering (BIOE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in bioengineering earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

The department offers an undergraduate major in Bioengineering leading to the B.S. degree in Bioengineering.

The Stanford Bioengineering (BIOE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in bioengineering earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

Students will complete engineering fundamentals courses, including an introduction to bioengineering and computer programming. A

BIOE 281
Biomechanics of Movement

BIOE 287

BIOE 291
Principles and Practice of Optogenetics for Optical Control of Biological Tissues

1 It is strongly recommended that CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers be taken rather than MATH 51 Linear Algebra and Differential Calculus of Several Variables and MATH 53 Ordinary Differential Equations with Linear Algebra. If you are taking the MATH 50 series, it is strongly recommended to take CME 192 Introduction to MATLAB. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. Although not required, CME 104 Linear Algebra and Partial Differential Equations for Engineers is recommended for some Bioengineering courses.

2 Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II, or CHEM 31X Chemical Principles Accelerated) and calculus-based Physics (PHYSICS 41 Mechanics and PHYSICS 43 Electricity and Magnetism), with at least two quarters of coursework each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu). Students pursuing a premed program need to take additional courses; see the UGHB, BioE Premed 4-Year Plan.

Honors Program

The School of Engineering offers a program leading to a Bachelor of Science in Bioengineering with Honors (BIOE-BSH). This program provides the opportunity for qualified BioE majors to conduct
independent research at an advanced level with a faculty research adviser and documented in an honors thesis.

In order to receive departmental honors, students admitted to the program must:

1. Declare the honors program in Axess (BIOE-BSH).
2. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
3. Complete at least two quarters of research with a minimum of nine units of BIOE 191 Bioengineering Problems and Experimental Investigation or BIOE 191X Out-of-Department Advanced Research Laboratory in Bioengineering for a letter grade; up to three units may be used towards the bioengineering depth elective requirements.
4. Submit a completed thesis draft to the honors adviser and second reader by the third week of Spring Quarter. Further revisions and final endorsement are to be finished by the second Monday in May, when two signed bound copies plus one PC-compatible CD-ROM are to be submitted to the student services officer.
5. Attend the Bioengineering Honors Symposium at the end of Spring Quarter and give a poster or oral presentation, or present in another approved suitable forum.

For more information and application instructions, see the Bioengineering Honors Program (http://bioengineering.stanford.edu/academics/undergraduate-programs/bioengineering-honors-program) web site.

**Coterminal Master’s Program in Bioengineering**

This option is available to Stanford undergraduates who wish to work simultaneously toward a B.S. in another field and an M.S. in Bioengineering. The degrees may be granted simultaneously or at the conclusion of different quarters, though the bachelor’s degree cannot be awarded after the master’s degree has been granted.

The University minimum requirements for the coterminal program are 180 units for the bachelor’s degree plus 45 unduplicated units for the master’s degree.

In order to apply for the coterminal master’s program student’s must have completed six, non-summer quarters at Stanford (two non-summer quarters for transfer students), have completed 120 undergraduate units, and must have declared the undergraduate major. They must be accepted into our program one quarter before receiving the B.S. degree.

Students should apply directly to the Bioengineering student service office by December 5, 2017. Students interested in the coterminal master’s degree must take the Graduate Record Examination (GRE) (http://www.gre.org). Prospective applicants should see the department’s web site for application form, instructions, and supporting documents (http://bioengineering.stanford.edu/admissions/coterm).

The application must provide evidence of potential for strong academic performance as a graduate student. The application is evaluated and acted upon by the graduate admissions committee of the department. Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Typically, a GPA of at least 3.5 in engineering, science, and math is expected.

**University Coterminal Requirements**

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

**Master of Science in Bioengineering**

The Master of Science in Bioengineering requires 45 units of coursework. The curriculum consists of core bioengineering courses, technical electives, seminars and unrestricted electives. Core courses focus on quantitative biology and biological systems analysis. Approved technical electives are chosen by the student in consultation with his/her graduate adviser, and can be selected from graduate course offerings in mathematics, statistics, engineering, physical sciences, life sciences, and medicine. Seminars highlight emerging research in bioengineering and provide training in research ethics. Unrestricted electives can be freely chosen by the student in association with his/her adviser.

**Requirements**

The department’s requirements for the M.S. in Bioengineering are:

1. **Core Bioengineering courses (10 units)**

   The following courses are required:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOE 300A</td>
<td>3</td>
</tr>
<tr>
<td>BIOE 300B</td>
<td>3</td>
</tr>
</tbody>
</table>

   Select two of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOE 301A</td>
<td>4-5</td>
</tr>
<tr>
<td>BIOE 301B</td>
<td></td>
</tr>
<tr>
<td>BIOE 301C</td>
<td></td>
</tr>
<tr>
<td>BIOE 301D</td>
<td></td>
</tr>
</tbody>
</table>

   Total Units: 10-11

   These courses, together with the approved technical electives, should form a cohesive course of study that provides depth and breadth.

2. **Approved Technical Electives (26 units)**

   These courses must be selected from graduate courses in mathematics, statistics, engineering, physical science, life science, and medicine. They should be chosen in concert with the bioengineering courses to provide a cohesive degree program in a bioengineering focus area. Students are required to take at least one course in some area of device or instrumentation. Up to 9 units of directed study and research may be used as approved electives.

3. **Seminars (3 units)**

   The seminar units should be fulfilled through:
Bioengineering

BIOE 393 Bioengineering Departmental Research Colloquium
MED 255 The Responsible Conduct of Research

Other relevant seminar units may also be used with the approval of the faculty adviser. One of the seminar units must be MED 255 The Responsible Conduct of Research.

4. Unrestricted Electives (6 units).

Students are assigned an initial faculty adviser to assist them in designing a plan of study that creates a cohesive degree program with a concentration in a particular bioengineering focus area. These focus areas include, but are not limited to: Biomedical Computation, Regenerative Medicine/Tissue Engineering, Molecular and Cell Bioengineering, Biomedical Imaging, and Biomedical Devices.

To ensure that an appropriate program is pursued by all M.S. candidates, students who first matriculate at Stanford at the graduate level must:

1. submit an adviser-approved Program Proposal for a Master’s Degree form to the student services office during the first month of the first quarter of enrollment
2. obtain approval from the M.S. adviser and the Chair of Graduate Studies for any subsequent program change or changes.

It is expected that the requirements for the M.S. in Bioengineering can be completed within approximately one year. There is no thesis requirement for the M.S.

Due to the interdisciplinary nature of Bioengineering, a number of courses are offered directly through the Bioengineering Department but many are available through other departments. See respective ExploreCourses for course descriptions.

Doctor of Philosophy in Bioengineering

A student studying for the Ph.D. degree must complete a master’s degree (45 units) comparable to that of the Stanford M.S. degree in Bioengineering. Up to 45 units of master’s degree residency units may be counted towards the degree. The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Students admitted to the Ph.D. program with an M.S. degree must complete at least 90 units of work at Stanford. The maximum number of transfer units is 45.

On the basis of the research interests expressed in their application, students are assigned an initial faculty adviser who assists them in choosing courses and identifying research opportunities. The department does not require formal lab rotations, but students are encouraged to explore research activities in two or three labs during their first academic year.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of bioengineering fundamentals and a potential for research by passing a qualifying oral examination before the end of the second year.

Typically, the exam is taken shortly after the student earns a master’s degree. The student must have a graduate Stanford GPA of 3.25 to be eligible for the exam. Once the student’s faculty sponsor has agreed that the exam is to take place, the student must submit an application folder containing items including a curriculum vitae, research project abstract, and preliminary dissertation proposal to the student services office. Information about the exam may be obtained from the student services office.

In addition to the course requirements of the M.S. degree, doctoral candidates must complete a minimum of 15 additional units of approved formal course work (excluding research, directed study, and seminars).

Dissertation Reading Committee

Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department’s Ph.D. qualifying exams. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research, no less than once per year.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. Reading committees in Bioengineering may include faculty from another department. It is required that at least one member of the Bioengineering faculty be on each reading committee. The initial committee, and any subsequent changes, must be officially approved by the department Chair.

University Oral and Dissertation

The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing), but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four selected faculty members, plus a chair from another department). Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval.

Ph.D. Minor in Bioengineering

Doctoral students pursuing a Ph.D. degree in a degree program other than Bioengineering may apply for the Ph.D. minor in Bioengineering. A minor is not a requirement for any degree, but is available when agreed upon by the student and the major and minor department.

Application forms, including the University’s general requirements, can be found at http://registrar.stanford.edu/shared/forms.htm. A student desiring a Ph.D. minor in Bioengineering must have a minor program advisor who is a regular Bioengineering faculty member. This advisor must be a member of the student’s reading committee for the doctoral dissertation, and the entire reading committee must meet at least one year prior to the date of the student’s dissertation defense.

The Ph.D. minor program must include at least 20 units of course work in Stanford Bioengineering or Bioengineering cognate courses at or above the 200 level. Of these 20 units, no more than 10 can be in cognate courses. All courses listed to fulfill the 20-unit requirement must be taken for a letter grade and the GPA must be at least 3.25. Courses used for a minor may not be used to also meet the requirements for a master’s degree.

M.D./Ph.D. Dual Degree Program

Students interested in a career oriented towards bioengineering and medicine can pursue the combined M.D./Ph.D. degree program. Stanford has two ways to do an M.D./Ph.D. U.S. citizens and permanent residents can apply to the Medical Scientist Training Program and can be accepted with funding from both M.D. and Ph.D. programs for stipend and tuition. They then apply to the bioengineering Ph.D during their first or second year of M.D. training. Students not admitted to the Medical Scientist Training Program must apply to be admitted separately to the M.D. program and the Ph.D. program of their choice.

The Ph.D. is administered by the Department of Bioengineering. To be formally admitted as a Ph.D. degree candidate in this combined degree program, the student must apply through normal departmental channels and must have earned or have plans to earn an M.S. in bioengineering or other engineering discipline at Stanford or another university. The M.S.
requires 45 units of course work which consists of core bioengineering courses, technical electives, seminars, and 6 unrestricted units. Students must also pass the Department of Bioengineering Ph.D. qualifying examination.

For students fulfilling the full M.D. requirements who earned their master’s level engineering degree at Stanford, the Department of Bioengineering waives the normal departmental requirement of 15 units applied towards the Ph.D. degree beyond the master’s degree level through formal course work. Consistent with the University Ph.D. requirements, the department accepts 15 units comprised of courses, research, or seminars approved by the student’s academic adviser and the department chair. Students not completing their M.S. engineering degree at Stanford are required to take 15 units of formal course work in engineering-related areas as determined by their academic adviser.

Joint Degree Programs in Bioengineering and the School of Law

The School of Law and the Department of Bioengineering offer joint programs leading to either a J.D. degree combined with an M.S. degree in Bioengineering or to a J.D. degree combined with a Ph.D. in Bioengineering.

The J.D./M.S. and J.D./Ph.D. degree programs are designed for students who wish to prepare themselves intensively for careers in areas relating to both law and bioengineering. Students interested in either joint degree program must apply and gain entrance separately to the School of Law and the Department of Bioengineering and, as an additional step, must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student’s admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or the Bioengineering Department may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Department of Bioengineering. Faculty advisers from each academic unit will participate in the planning and supervising of the student’s joint program. Students must be enrolled full time in the Law School for the first year of law school, and, at some point during the joint program, may be required to devote one or more quarters largely or exclusively to studies in the Bioengineering program regardless of whether enrollment at that time is in the Law School or in the Department of Bioengineering. At all other times, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the M.S. or Ph.D. degrees as specified in the Stanford Bulletin or elsewhere.

The Law School shall approve courses from the Bioengineering Department that may count toward the J.D. degree, and the Bioengineering Department shall approve courses from the Law School that may count toward the M.S. or Ph.D. degree in Bioengineering. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student’s program. The lists may differ depending on whether the student is pursuing an M.S. or a Ph.D. in Bioengineering.

In the case of a J.D./M.S. program, no more than 45 units of approved courses may be counted toward both degrees. In the case of a J.D./Ph.D. program, no more than 54 units of approved courses may be counted toward both degrees. In either case, no more than 36 units of courses that originate outside the Law School may count toward the law degree. To the extent that courses under this joint degree program originate outside of the Law School but count toward the law degree,
CHEMICAL ENGINEERING

Courses offered by the Department of Chemical Engineering are listed under the subject code CHEMENG on the [ExploreCourses.web site](https://explorecourses.stanford.edu/search?q=CHEMENG&view=catalog&page=0&AcademicYear=on&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=true&filter-departmentcode=CHEMENG=on&filter-catalognumber=CHEMENG=on&filter-coursestatus-Active=on&filter-catalognumber=CHEMENG=on)Stanford Bulletin's ExploreCourses web site..

Research investigations are currently being carried out in the following fields: applied statistical mechanics, biocatalysis, bioengineering, biophysics, colloid science, computational materials science, electronic materials, hydrodynamic stability, kinetics and catalysis, Newtonian and non-Newtonian fluid mechanics, polymer science, renewable energy, rheo-optics of polymeric systems, and surface and interface science. Additional information may be found at [http://cheme.stanford.edu](http://cheme.stanford.edu).

The Department of Chemical Engineering offers opportunities for both undergraduates and graduate students to pursue course work and research in energy sciences and technology, which include the chemical, physical, mathematical, and engineering sciences. Courses include 25E, 35N, 140/240, 142/242, 162/262, 432, 444 with some 400 level courses being offered only in alternate years.

In addition, both undergraduates and graduate students can pursue work in interdisciplinary biosciences, which include the chemical, biological, physical, mathematical, and engineering sciences. Courses include 150, 174/274, 181/281, 183/283, 185B, 355, 420, 450, 454 with some advanced graduate courses offered only in alternate years. Students are encouraged to review course offerings in all departments of the School of Engineering and to seek academic advising with individual chemical engineering faculty. Students wishing assistance should talk with student services staff in the department.

Further information about the department also may be found at [http://cheme.stanford.edu](http://cheme.stanford.edu). Undergraduates considering majoring in Chemical Engineering are encouraged to talk with faculty and to meet with student services' staff in Shiram room 129. Students interested in pursuing advanced work in chemical engineering, including coterminal degrees, should contact the student services manager. Admission to an advanced degree program for an active Stanford graduate student is by approval of a Graduate Authorization Petition. All other interested applicants should go to [http://studentaffairs.stanford.edu/gradadmissions](http://studentaffairs.stanford.edu/gradadmissions) for general and departmental information about the requirements and processes for applying for admission to a graduate degree program.

Mission of the Undergraduate Program in Chemical Engineering

Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students’ understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program’s core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government or for advanced study.

Learning Outcomes (Undergraduate)

Learning outcomes are used in evaluating students and the undergraduate program. The department expects undergraduate majors in the program to be able to demonstrate the following:

1. an ability to apply knowledge of mathematics, science, and engineering.
2. an ability to design and conduct experiments, as well as to analyze and interpret data.
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. an ability to function on multidisciplinary teams.
5. an ability to identify, formulate, and solve engineering problems.
6. an understanding of professional and ethical responsibility.
7. an ability to communicate effectively.
8. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. a recognition of the need for, and an ability to engage in life-long learning.
10. a knowledge of contemporary issues.
11. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through advanced lecture course work in the fundamentals of the field, including microhydrodynamics, molecular thermodynamics, kinetics, spectroscopy, applied mathematics, and biochemical engineering, in addition to the student’s area of specialization. All students must master the fundamental chemical, physical, and biological concepts that govern molecular behavior.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Chemical Engineering and related fields.

Graduate Programs in Chemical Engineering

The University’s requirements, including residency requirements, for the M.S., Engineer, and Ph.D. degrees are summarized in the "Graduate Degrees" section of this bulletin.

Current research and teaching activities cover a number of advanced topics in chemical engineering, including applied statistical mechanics, biocatalysis, biochemical engineering, bioengineering, biophysics, computational materials science, colloid science, dynamics of complex fluids, energy conversion, functional genomics, hydrodynamic stability, kinetics and catalysis, micorheology, molecular assemblies, nanoscience and technology, Newtonian and non-Newtonian fluid mechanics, polymer physics, protein biotechnology, renewable fuels, semiconductor processing, soft materials science, solar utilization, surface and interface science, and transport mechanics.
Fellowships and Assistantships
Qualified predoctoral applicants are encouraged to apply for nationally competitive fellowships, for example, those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for application information and advice. In the absence of other awards, incoming Ph.D. students normally are awarded departmental fellowships. Matriculated Ph.D. students are supported primarily by fellowship awards and assistantship research or teaching appointments. All students are encouraged to apply for external, competitive fellowships and may obtain information about various awarding agencies from faculty advisers and student services. Assistantships are paid positions for graduate students that, in addition to a salary, provide the benefit of a tuition allocation. Individual faculty members appoint students to research assistantships; the department chair appoints doctoral students to teaching assistantships. Contact departmental student services for additional information.

Bachelor of Science in Chemical Engineering
The Chemical Engineering B.S. program requires basic courses in biology, chemistry, engineering, mathematics, and physics. The depth sequence of courses required for the major in chemical engineering provides training in applied chemical kinetics, biochemical engineering, electronic materials, engineering thermodynamics, plant design, polymers, process analysis and control, separation processes, and transport phenomena. Undergraduates who are considering and/or wish to major in chemical engineering should talk with departmental student services as early as during freshman orientation if feasible and consult the curriculum outlined in the “Undergraduate Program in Chemical Engineering” section of this bulletin. Courses taken to fulfill the requirements for the major (courses in mathematics; science; technology and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if this option is offered.

Representative sequences of courses leading to a B.S. in Chemical Engineering, in both flow chart and 4-year, quarter-by-quarter formats, can be found in the Handbook for Undergraduate Engineering Programs, available at http://ughb.stanford.edu. These are explanatory examples, with each sequence starting at a different level and demonstrating how a student, based on his or her pre-college preparation, can complete the major in four years. These typical course schedules are available as well from departmental student services and chemical engineering faculty advisers for undergraduates. It is recommended that students discuss their prospective programs with the chemical engineering faculty advisers, particularly if they are transferring from another major such as Biology, Chemistry, Physics, or another Engineering major. With advance planning, students can usually arrange to attend one of the overseas campuses.

Students interested in a minor in Chemical Engineering should consult the requirements for a “Minor in Chemical Engineering” section of this bulletin.

Chemical Engineering
Completion of the undergraduate program in Chemical Engineering leads to the conferral of the Bachelor of Science in Chemical Engineering.

Mission of the Undergraduate Program in Chemical Engineering
Chemical engineers are responsible for the conception and design of processes for the purpose of production, transformation, and transportation of materials. This activity begins with experimentation in the laboratory and is followed by implementation of the technology in full-scale production. The mission of the undergraduate program in Chemical Engineering is to develop students’ understanding of the core scientific, mathematical, and engineering principles that serve as the foundation underlying these technological processes. The program’s core mission is reflected in its curriculum which is built on a foundation in the sciences of chemistry, physics, and biology. Course work includes the study of applied mathematics, material and energy balances, thermodynamics, fluid mechanics, energy and mass transfer, separations technologies, chemical reaction kinetics and reactor design, and process design. The program provides students with excellent preparation for careers in the corporate sector and government, or for graduate study.

Honors Program in Chemical Engineering

The Department of Chemical Engineering offers a program leading to the degree of Bachelor of Science in Chemical Engineering with Honors. Qualified undergraduate majors conduct independent study and research at an advanced level with faculty mentors, graduate students, and fellow undergraduates. This three quarter sequential program requires concurrent participation each quarter in the CHEMENG 191H Undergraduate Honors Seminar; completion of a faculty-approved thesis; and participation in the Chemical Engineering Honors Poster Session held during the Mason Lecture Series Spring Quarter. The last requirement may be fulfilled through an alternative, public, oral presentation with the approval of the department chair. A research proposal/application must be submitted at least five quarters prior to graduation to begin at a minimum of four quarters prior to graduation.

Admission to the honors program is by application and submission of a research proposal and is subject to approvals by faculty advisers, sponsors, and the chair of the department. Declared Chemical Engineering majors with a cumulative grade point average (GPA) of 3.5 or higher are encouraged to apply. Students must submit their applications no later than the first week of March Winter Quarter of their junior year, assuming a June degree conferral the following year, e.g. the 2017-2018 deadline is March 2, 2018. An application includes a Stanford transcript in addition to the research proposal, approved by both the student's research thesis adviser, a faculty reader, and, if required, a chemical engineering faculty sponsor. The research adviser or the reader, or alternatively, a faculty sponsor, must be a faculty member in the Department of Chemical Engineering. Students must start their research no later than Spring Quarter their junior year and are encouraged to consider incorporating research opportunities such as those sponsored by Undergraduate Academic Life into their honors research proposal; see http://ual.stanford.edu/OO/research_opps/Grants. See departmental student services staff in Shriram Center room 129, for more information about the application process, a proposal template, and other assistance.

In order to receive departmental honors, students admitted to the honors program must:

1. Maintain an overall grade point average (GPA) of at least 3.5 as calculated on the unofficial transcript.
2. Complete at least three quarters of research with an aggregate enrollment of a minimum of 9 units in CHEMENG 190H Undergraduate Honors Research in Chemical Engineering for a letter grade. All quarters must focus on the same topic. The same faculty adviser and faculty reader should be maintained throughout if feasible.
3. Enroll in CHEMENG 191H Undergraduate Honors Seminar, concurrently with each quarter of enrollment in CHEMENG 190H Undergraduate Honors Research in Chemical Engineering.
4. Participate with a poster and oral presentation of thesis work at the Chemical Engineering Honors Poster Session held during the Mason Lectures week, Spring Quarter, or, at the Undergraduate Program Committee's discretion, at a comparable public event. Submit at the same time to student services one copy of the poster in electronic format.
5. Submit final drafts of a thesis simultaneously to the adviser and the reader and, if appropriate, to the Chemical Engineering faculty sponsor, no later than April 9, 2018, or the first school day of the second week of the quarter in which the degree is to be conferred.
6. Complete all work and thesis revisions and obtain indicated faculty approvals on the Certificate of Final Reading of Thesis forms by April 30, 2018, or the end of the first month of the graduation quarter.
7. Submit to departmental student services five (5) final copies of the honors thesis, as approved by the appropriate faculty. Include in each thesis an original, completed, faculty signature sheet immediately following the title page. The 2017-2018 deadline is May 3, 2018.
8. Submit to student services a copy of the honors thesis in electronic format at the same time as the final copies of the thesis.

Honors Program in Chemical Engineering

The following core courses fulfill the minor requirements:

Master of Science in Chemical Engineering

A range of M.S. programs comprising appropriate course work is available to accommodate students wishing to obtain further academic preparation before pursuing a chemical engineering career or a degree program. The degree requirements are lecture course based; there are no research or thesis requirements. This is a terminal M.S. degree, i.e. this degree is not a prerequisite for nor does it lead to admission to the department’s Ph.D. program.

Coterminal master’s students should see the specific requirements for the coterminal degree below.

Unit and Course Requirements for the Master’s Degree

Students terminating their graduate work with the M.S. degree in Chemical Engineering must develop a graduate-level, thematic M.S. program consisting of a minimum of 45 completed units of academic work that includes:

1. Four (4) Chemical Engineering core graduate lecture courses selected from the CHEMENG 300 series
2. Three (3) units of CHEMENG 699 Colloquium
3. An additional 30 units, selected from graduate-level science or engineering lecture courses (3 units or more) in any appropriate department. Of these 30 units, 18 must be graduate-level science and engineering lecture courses. The remaining 12 units can come from a combination of the following categories:
   - An additional 3-12 units of graduate-level science and engineering lecture courses.
   - No more than 6 units of non-science and engineering lecture courses; for example, MS&E classes and CHEMENG 296 fall into this category.
   - No more than 6 units of lab courses.
   - No more than 6 units combined of research units or seminar courses on science and engineering topics under the following conditions:
     - Up to 6 units of research
     - No more than 3 of these 6 units can be taken as seminar courses; examples include: 1 unit seminar and 5 units research; 2 units seminar and 4 units research; 3 units seminar and 3 units research.

Credit toward the required minimum of 45 completed units for the M.S. degree is not given for Chemical Engineering special topics courses numbered in the 500 series.

To ensure that an appropriate Chemical Engineering graduate program is pursued by each M.S. candidate, students who first matriculate at Stanford at the graduate level must do the following, during the first quarter, no later than the seventh week:

1. Complete a Program Proposal for a Master’s Degree form, that is approved by the M.S. adviser
2. Submit this petition form to departmental student services, for review by the graduate curriculum committee, and

3. Obtain approval for any subsequent program change or changes, using a freshly completed Program Proposal form, from the M.S. adviser and the faculty chair of the graduate curriculum committee.

All M.S. candidates must obtain approvals for the final M.S. program no later than the seventh week of the quarter preceding the quarter of degree conferral, in order to permit amendment of the final quarter’s study list if the faculty deem this necessary. Students with questions should contact departmental graduate student services.

Minimum Grade Requirement

Any course used to satisfy the 45-unit minimum for the Master of Science degree must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained for these courses.

Research Experience

Students in the M.S. program wishing to obtain research experience should talk with departmental student services and work with the M.S. faculty adviser on the choice of research adviser as early as feasible and in advance of the anticipated quarter(s) of research. Once arrangements are mutually agreed upon, including the number of units, students enroll in the appropriate section of CHEMENG 600 Graduate Research in Chemical Engineering. A written report describing the results of the research undertaken must be submitted to and approved by the research adviser. Research units may not be substituted for any of the required four 300-level core lecture courses.

Coterminal Master's Degrees in Chemical Engineering

Stanford undergraduates with strong academic records may apply to study for a master’s degree while at the same time completing their bachelor’s degree(s). Interested students should discuss their educational goals with their faculty advisers and talk with departmental graduate student services about the application requirements before submitting an application in Axess. Students, who have completed at least 120 units toward an undergraduate degree and complete their applications by the seventh week of a quarter, may be admitted to the Chemical Engineering M.S. program the following quarter.

University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the "Coterminal Master’s Program (p. 46)" section. University requirements for the master’s degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree
Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

**Engineer in Chemical Engineering**

The degree of Engineer is awarded after the completion of a minimum of 90 units of graduate work beyond the B.S. degree and the satisfactory completion of all University requirements plus the following departmental requirements. Application to this program is open only to active chemical engineering M.S. or Ph.D. candidates. This degree is not a prerequisite for the Ph.D. program.

**Unit and Course Requirements**

A minimum of 90 completed units is required, including a component of a minimum of 45 units in science and engineering courses, consisting of 42 lecture units and 3 CHEMENG 699 Colloquium units. The required CHEMENG courses are listed below.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEMENG 300</td>
<td>Applied Mathematics in the Chemical and Biological Sciences</td>
<td>3</td>

<td>Advanced Biochemical Engineering</td>
<td>3</td>
</tr>
</tbody>
</table>

Plus 3 units of:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEMENG 699</td>
<td>Colloquium</td>
<td>1</td>
</tr>
</tbody>
</table>

The additional lecture courses, (24 units), may be chosen from graduate level science and engineering courses according to the guidelines given in the “Master’s” (p. 255)” section and with the consent of the graduate curriculum committee chair and the department chair. If fulfilling the required 45-unit requirement for lecture course units, the course work may not include chemical engineering’s 500 level seminar courses or similar 1-2 unit courses in other departments. The remaining 45 units are primarily research units.

Students seeking the Engineer degree may petition to add a M.S. program and apply for the M.S. degree once the requirements for that degree have been fulfilled. See General Requirements in the “Graduate Degrees (p. 50)” section of this bulletin and Chemical Engineering’s “Master’s (p. 255)” section.

**Minimum Grade Requirement**

Any course intended to satisfy the Engineer degree requirements must be taken for a letter grade, if offered. An overall grade point average (GPA) of 3.0 must be maintained.

**Reading Committee Requirement**

All candidates are required to have an initial meeting with their reading committees by the end of their ninth quarter. The committee must have a minimum of two members, both of whom are Chemical Engineering faculty members. The reading committee meetings are intended to be discussion sessions, to help to focus and guide the thesis project; they are not examinations.

Students are responsible for reporting meeting dates to departmental student services.

**Thesis Requirement**

The thesis must represent a substantial piece of research equivalent to nine months of full-time effort and must be approved by the student’s reading committee.

**Qualification for the Ph.D. Program by Students Ready to Receive the Degree of Engineer**

After completing the requirements for the Engineer degree, a student may petition to be examined on the research work completed for that degree, for the purpose of qualifying for admission to Ph.D. candidacy. If the petition is approved, the student’s thesis must be approved by the reading committee and available in its final form for inspection by the entire faculty at least two weeks prior to the scheduled date of said examination.

**Doctor of Philosophy in Chemical Engineering**

The University’s general requirements for the Ph.D. are specified in the “Graduate Degrees (p. 50)” section of this bulletin.

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements and the following departmental requirements. Completion of a M.S. degree is not a prerequisite for beginning, pursuing, or completing doctoral work.

**Unit and Course Requirements**

A minimum of 135 completed units is required, including a component of a minimum of 45 units in science and engineering courses, consisting of 42 lecture units and 3 units of CHEMENG 699 Colloquium.

1. CHEMENG 699 should be taken all years each quarter of the academic year; all these units count toward the required 135 units.
2. The research units for CHEMENG 399 count toward the required 135 units, but may not be counted toward the 45 unit component.
3. Students working with a research adviser should enroll each quarter in the 500 series, 600, and 699 as appropriate and as study list unit limits permit. All these seminar and research units are included within the required minimum of 135 units for degree.

Students with questions or issues should contact departmental graduate student services (http://cheme.stanford.edu/about/contact).

The following courses are required:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEMENG 300</td>
<td>Applied Mathematics in the Chemical and Biological Sciences</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 310</td>
<td>Microhydrodynamics</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 320</td>
<td>Chemical Kinetics and Reaction Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 340</td>
<td>Molecular Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 345</td>
<td>Fundamentals and Applications of Spectroscopy</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 355</td>
<td>Advanced Biochemical Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 699</td>
<td>Colloquium</td>
<td>1</td>
</tr>
</tbody>
</table>

Plus two courses at the 400 course level; in 2017-18 the following are available:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHEMENG 420</td>

</tr>
<tr>
<td>CHEMENG 456</td>
<td>Microbial Bioenergy Systems</td>
<td>3</td>
</tr>
<tr>
<td>CHEMENG 466</td>
<td>Polymer Physics</td>
<td>3</td>
</tr>
</tbody>
</table>

These courses are to be taken at Stanford, and any petition to substitute another graduate-level course for any of these core courses must be approved by the department chair. The remaining graduate-level
science and engineering lecture courses may be chosen from any department. A student may petition the department chair for approval to include an upper-division undergraduate science or engineering lecture course. All proposals for Ph.D. required course work must be approved by the student’s adviser and the department chair or the chair of the department’s Graduate Curriculum Committee. Students with questions, concerns, or issues should contact student services staff in the department office in Shriram Center, room 129.

Ph.D. students may petition to add a M.S. degree program to their university record; submit in a Graduate Authorization petition in Axess. Once the online petition is approved, the M.S. candidate must complete a Program Proposal for a Master’s Degree form and submit it to departmental student services.

Ph.D. students with a M.S. program apply in Axess for M.S. degree conferral. (See the “Master of Science in Chemical Engineering” section in this bulletin.) The M.S. degree must be awarded within the University’s candidacy period for completion of a master’s degree.

Minimum Grade Requirement
Any course intended to satisfy the Ph.D. degree requirements must be taken for a letter grade, if offered. A GPA of 3.0 or above is required by the end of the first year, in order to continue in the Ph.D. program. The overall grade point average (GPA) of at least 3.0 must to be maintained.

Degree Milestones
Degree milestones indicate progress toward degree. They are listed on unofficial transcripts and document satisfactory and timely completion of various events, such as securing research advisers, candidacy examinations, submission of completed degree progress forms, dates of reading committee meetings, assisting with the teaching CHEMENG courses. Report and submit forms as appropriate to departmental student services. Students with questions or issues should talk with student services staff; students approaching a milestone should be aware of intradepartmental communications and support, and students with concerns should discuss them with student services staff.

Candidacy
To be advanced to Ph.D. candidacy, the student must secure a research dissertation adviser (and any required co-adviser), successfully complete a Ph.D. candidacy examination, and submit a completed Application for Candidacy for Doctoral Degree form.

First, the research adviser and any required co-adviser must be established by the end of the second quarter in the Ph.D. program. Failure to do so leads to termination of a student’s study toward a Ph.D. in Chemical Engineering; however, the student may continue to work toward an M.S. degree (see the "Master of Science in Chemical Engineering" section of this bulletin). Departmental Ph.D. financial support does not continue.

Second, the Ph.D. candidacy examination before a faculty committee is at the end of the fourth quarter. It consists of (a) a student’s oral presentation of their thinking about their research proposal and current progress and (b) an examination by faculty members of the proposal specifics as well as the student’s understanding of the fundamental chemical, physical, and biological concepts that govern the molecular behavior of the system being studied. Upon successful completion of this examination, candidates must submit an Application for Candidacy for Doctoral Degree form, approved by their research adviser(s), to departmental graduate student services within two months.

Teaching Requirement
Teaching experience is considered an essential component of pre-doctoral training because it assists in the further development and refinement of candidates’ skills in conveying what they know, think, and conclude, based on articulated assumptions and knowledge. All Ph.D. candidates, regardless of the source of their financial support, are required to assist in the teaching of a minimum of two chemical engineering courses.

Reading Committee Requirement
Reading committee meetings are intended to be discussion sessions with all members of the reading committee participating that help to focus and refine the dissertation project; they are not examinations.

By the end of the second year, all Ph.D. candidates are required to have an initial meeting with the complete reading committee. It is the candidate’s responsibility to schedule committee meetings, and the faculty’s to respond in a timely manner to scheduling requests. The composition of the reading committee may be amended; submit appropriate form to student services. Candidates are responsible for reporting meeting dates to departmental student services.

The faculty strongly encourage doctoral candidates to take advantage of the benefits of annual committee meetings, to enable candidates to benefit from this type of open discussion, support, and recommendations from faculty.

Research Poster Requirement
Experience in analyzing and presenting one’s research to diverse audiences also is an essential component of predoctoral training, and faculty strongly encourage candidates to do so several times each year, starting in the second year. All candidates in their third year are required to prepare and present a research poster during the annual Mason Lectures week in spring quarter.

Dissertation and Oral Defense Requirements
A dissertation based on a successful investigation of a fundamental problem in chemical engineering is required. A student is expected to have fulfilled all the requirements for this degree, including the completion of a dissertation approved by his or her research adviser(s) and reading committee members within approximately five years after enrolling the Ph.D. program. Upon advisor approval (s), copies of the final draft of the dissertation must be distributed to each reading committee member. No sooner than three weeks after this distribution, a student may schedule an oral examination. This examination is a dissertation defense, based on the candidate’s dissertation research, and is in the form of a public seminar followed by a private examination by the faculty members on the student’s oral examination committee. Satisfactory performance in the oral examination and acceptance of an approved dissertation by Graduate Degree Progress, Office of the University Registrar, leads to Ph.D. degree conferral.

Ph.D. Minor in Chemical Engineering
The University’s general requirements for the Ph.D. minor are specified in the "Graduate Degrees (p. 50)" section of this bulletin. An application for a Ph.D. minor must be approved by both the major and minor departments.

A student proposing a Ph.D. minor in Chemical Engineering must work with a minor program adviser who has a faculty appointment in Chemical Engineering. This adviser must be included as a member of the student’s reading committee for the doctoral dissertation, and the entire reading committee must meet at least once with the candidate. This meeting should occur at least one year prior to the scheduling of the student’s oral examination; the department strongly prefers that regular meetings of the complete reading committee start in the second year of graduate study. In addition, the Chemical Engineering faculty member who is the minor
adviser must be a member of the student’s University oral examination committee.

The Ph.D. minor program must include at least 20 units of graduate-level lecture courses (numbered at the 200 level or above), but may not include any 1-2 unit lecture courses in the 20-unit minimum. The list of courses must form a coherent program and must be approved by the minor program adviser and the chair of this department. All courses for the minor must be taken for a letter grade, and a GPA of at least 3.0 must be earned for these courses.

Emeriti: (Professors) Andreas Acrivos, George M. Homsy, Robert J. Madix, Channing R. Robertson

Chair: Eric S. G. Shaqfeh

Associate Professors: Alexander R. Dunn, Thomas F. Jaramillo, Andrew J. Spakowitz

Assistant Professors: Matteo Cargnello, Jian Qin, Elizabeth S. Sattely, Roseanna N. Zia

Senior Lecturer: Lisa Y. Hwang

Lecturers: Melis Duyar, Ricardo B. Levy, Shari B. Libicki, Sara Loesch-Frank, John E. Moalli, Howard B. Rosen

Adjunct Professors: Ying Chih Chang, Jae Chun Hyun, Do Y. Yoon

Cognate Courses for Advanced Degrees in Chemical Engineering

In addition to core CHEMENG graduate courses in the 300 series and elective CHEMENG graduate courses in the 200 and 400 series, students pursuing advanced degrees in chemical engineering include elective courses offered by other departments. The following list is a partial list of the more frequently chosen courses and is subdivided into five focus areas.

CIVIL AND ENVIRONMENTAL ENGINEERING

The Department of Civil and Environmental Engineering (CEE) at Stanford conducts fundamental and applied research to advance the civil and environmental engineering professions, educate future academic and industry leaders, and prepare students for careers in professional practice. Civil and environmental engineers work to sustain the natural environment while creating and maintaining the built environment. Civil and environmental engineers are essential to providing the necessities of human life, including water, air, shelter, the infrastructure, and energy, in increasingly more efficient and renewable ways.

Research and teaching in the department focus on the theme of engineering for sustainability, including three core areas: built environment, environmental and water studies, and atmosphere/energy.

In the area of sustainable built environments, the focus is on processes, techniques, materials, and monitoring technologies for planning, design, construction, and operation of environmentally sensitive, economically efficient, performance-based buildings and infrastructure, and managing associated risks from natural and man-made hazards. In the area of environmental and water studies, the focus is on creating plans, policies, science-based assessment models and engineered systems to manage water in ways that protect human health, promote human welfare, and provide freshwater and coastal ecosystem services. In the atmosphere/energy area, research and teaching focus on fundamental energy and atmospheric engineering and science, assessment of energy-use effects on atmospheric processes and air quality, and analysis and design energy-efficient generation and use systems with minimal environmental impact.

The department oversees undergraduate programs in Civil Engineering and in Environmental Systems Engineering. The department also hosts the School of Engineering undergraduate major in Architectural Design and the undergraduate major in Atmospheric Engineering - both of which lead to a B.S. in Engineering.

Mission of the Undergraduate Program in Civil Engineering

The mission of the undergraduate program in Civil Engineering is to equip students with the knowledge and skills needed for a successful professional career. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st century involving natural and built environments, in consulting and industry as well as in graduate school.

Learning Outcomes (Undergraduate)

Undergraduates in the Civil Engineering and the Environmental Systems Engineering programs are expected to achieve the following learning outcomes through their major. These learning outcomes are used both in evaluating students and the department's undergraduate programs. Students are expected to demonstrate the ability to:

1. apply knowledge of mathematics, science, and engineering.
2. design and conduct experiments, as well as analyze and interpret data.
3. design a system, component, or process to meet desired needs.
4. function on multidisciplinary teams.
5. identify, formulate, and solve engineering problems.
6. understand professional and ethical responsibility.
7. communicate effectively.
8. obtain the broad education necessary to understand the impact of engineering solutions in a global and societal context.
9. recognize the need for and engage in life-long learning.
10. gain knowledge of contemporary issues.
11. apply the techniques, skills, and modern engineering tools necessary for engineering practice.
12. acquire the background for admission to engineering or other professional graduate programs.

Mission of the Undergraduate Program in Environmental Systems Engineering

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math, science, and engineering fundamentals, and tools and skills considered essential for an engineer. Students can choose from one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. The major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st century involving natural and built environments, in consulting and industry as well as in graduate school.

Learning Outcomes (Graduate)

The purpose of the master’s program is to equip students with the knowledge and skills necessary for a successful professional career or for the pursuit of doctoral studies. Students are prepared through course work that is organized into three broad areas including the built environment, atmosphere and energy, and environmental engineering. Graduate students must master the analytical, quantitative, and interpretive skills necessary for successful leadership in their chosen field.

The Ph.D. is conferred upon candidates who have demonstrated substantial original scholarship and the ability to conduct independent research. The Ph.D. program prepares students to make original contributions to the theory and practice of Civil and Environmental Engineering and related fields.
Graduate Programs in Civil and Environmental Engineering

The Department of Civil and Environmental Engineering (CEE) offers graduate degrees structured in three areas of study.

- The Atmosphere/Energy Program offers degrees with the designation of Atmosphere/Energy.
- The Sustainable Built Environment Program offers degrees with two designations:
  - Structural Engineering and Geomechanics
  - Sustainable Design and Construction
- The Environmental Engineering Program offers degrees with the designation of Environmental Engineering

For detailed information on these programs and degree designations, see the "Programs of Graduate Study in Civil and Environmental Engineering" section of this bulletin.

Admissions and Financial Aid

Applications require online submission of the application form and statement of purpose, followed by three letters of recommendation, results of the General Section of the Graduate Record Examination, and transcripts of all courses taken at colleges and universities. See http://gradadmissions.stanford.edu. Policies for each of the programs in the department are available on the department website. See: http://cee.stanford.edu. Successful applicants are advised as to the degree and program for which they are admitted. If students wish to transfer from one CEE program to another after being accepted, an application for the intradepartmental change must be filed within the department. If, after enrollment at Stanford, students wish to continue toward a degree beyond that for which they were originally admitted, a written application must be made to the Department of Civil and Environmental Engineering.

The department maintains a continuing program of merit-based financial aid for graduate students. Merit-based financial aid consists of teaching assistantships and/or research assistantships for up to half-time work, with the assumption that students spend the rest of their time on coursework and research required for completion of the degree. Fellowship and scholarship awards or loans may supplement assistantships and other basic support. Continued support is generally provided for further study toward the Engineer or Ph.D. degree based on the student’s performance, the availability of research funds, and requisite staffing of current research projects.

Research Centers and Facilities

Research in the department related to environmental and water studies is conducted in the Bob and Norma Street Environmental Fluid Mechanics Laboratory (EFML) and the Environmental Engineering and Science Laboratory (EESL). The EESL is home to the National Science Foundation (NSF) supported Engineering Research Center for Re-inventing the Nation’s Urban Water Infrastructure (ReNUWIt), a four-university consortium that seeks more sustainable solutions to urban water challenges in the arid west, and the William and Cloy Codiga Resource Recovery Center (CR2C), a new facility for pilot-scale testing of resource recovery technology. Other centers and groups in the department related to environmental engineering include the Environmental Informatics Group, the National Performance of Dams Program (NPDP), and the center for Sustainable Development and Global Competitiveness (SDGC). There is also extensive collaboration with research centers and groups throughout the university, including the Woods Institute for the Environment, the Bill Lane Center for the American West, the Carnegie Institution, the Center for Innovation in Global Health, Stanford Bio-X, the Environmental and Natural Resources Law and Policy Program, the Freeman Spogli Institute for International Studies, and the Precourt Institute for Energy.

Several research centers in the department focus on improving the sustainability of the built environment. The John A. Blume Earthquake Engineering Center conducts research on earthquake engineering including advanced sensing and control, innovative materials, and risk hazard assessment. Research and advanced global teamwork education is conducted in the Project Based Learning (PBL) Laboratory. In collaboration with the Department of Computer Science, the Center for Integrated Facility Engineering (CIFE) employs advanced information and communication technologies and concepts to integrate the facility development process and enhance the usability, buildability, operability, and sustainability of facilities. The Global Projects Center (GPC) is a multi-discipline, multi-university research program aimed at improving the performance of global engineering and construction projects, with a special focus on financing and governance of sustainable civil and social infrastructure projects. The Stanford Sustainable Systems Lab (S3L) aims to advance the state of the art in the design, monitoring and management of built environment systems, with a special focus on smart grid, smart buildings and smart infrastructures.

Programs of Graduate Study in Civil and Environmental Engineering

Atmosphere/Energy Program

The Atmosphere/Energy Program in Civil and Environmental Engineering combines atmospheric science with energy science and engineering. The main goals of the program are to educate students and the public, through courses, research, and public outreach, about the causes of climate, air pollution, and weather problems and methods of addressing these problems through renewable and efficient energy systems. In addition, students learn about feedback between the atmosphere and renewable energy systems and the effects of the current energy infrastructure on the atmosphere.

Major focus areas of energy research include examining the resource availability of renewable energies, such as wind, solar, and wave, and studying optimal methods of combining renewable energies together to match energy supply with instantaneous demand. This type of work is generally done through a combination of data analysis, three-dimensional atmospheric computer modeling of wind, solar, wave, and hydroelectric power resources, and transmission load flow computer modeling. Other energy research, performed through three-dimensional computer modeling, focuses on the effects, for example, of hydrogen fuel cell vehicles on air pollution and the ozone layer and the effects of ethanol and diesel vehicles on air quality and climate. Studies also examine the feedback of wind turbines to the atmosphere and the effects of climate change on wind and solar energy resources.

Atmospheric research in the program generally involves laboratory work, field measurements, or three-dimensional computer modeling of the combined atmosphere, ocean, and land surface. An example of laboratory work includes measuring the properties of organic particulate matter that forms in the atmosphere. Examples of fieldwork include measuring exposures to secondhand smoke, allergens, and emissions from building materials.

Computer modeling is performed at a variety of spatial scales, from the globe down to the size of a building or smaller. Some examples of modeling studies include examining the effects of air pollution particles on clouds, rainfall, water supply, ultraviolet radiation, the stratospheric ozone layer, and climate, simulating the dispersion of toxic contaminants in an urban street canyon, studying the effects of aircraft exhaust and biomass burning on climate, studying the effects of carbon dioxide domes over cities on air pollution mortality, and studying the leading causes of global warming and their impacts.
Students interested in the Atmosphere and also Clean Renewable Energy systems would most likely apply to the Atmosphere/Energy Program. Those interested in the Atmosphere and also Water systems would most likely apply to the Environmental Engineering Program. Those interested in Atmospheric topics alone (e.g., weather, climate, pollution and its impacts) could apply to either, depending on the courses of interest.

**Environmental Engineering Program**

The mission of the Environmental Engineering program is to develop state-of-the-art knowledge, models, and processes which form the core of environmental engineering practice, and to train and educate current and future academic and professional environmental leaders. We do this by synthesizing physical, biological, and chemical facets of engineering and science along with elements of the social sciences into our research and teaching. Ultimately, the goal is to protect and sustain our natural resources and human health and contribute to the sustainable development of physical infrastructure, including systems for wastewater treatment, water supply, renewable energy, and resilient coastal environments.

The Environmental Engineering (EnvEng) program combines elements of two former programs in the department, namely Environmental Fluid Mechanics and Hydrology (EFMH) and Environmental Engineering and Science (EES). Research and coursework in the Environmental Engineering program are centered around the five focus areas which include:

- Environmental Modeling and Simulation
- Environmental and Geophysical Fluid Mechanics
- Hydrology and Water Resources
- Aquatic Chemistry and Biology and Process Engineering
- Human Health and the Environment

Research in the program spans the physical, chemical, and biological dimensions of Environmental Engineering Research related to the physical aspects of environmental engineering is conducted in the Bob and Norma Street Environmental Fluid Mechanics Laboratory (EFML), whereas research on the chemical and biological aspects is conducted in the Environmental Engineering and Science Laboratory (EESL). The EESL is home to the National Science Foundation (NSF) supported Engineering Research Center for Re-inventing the Nation’s Urban Water Infrastructure (ReNUWIt), a four-university consortium that seeks more sustainable solutions to urban water challenges in the arid west, and the William and Cloy Codiga Resource Recovery Center (CR2C), a new facility for pilot-scale testing of resource recovery technology. There is extensive crossover between the EFML and the EESL, reflecting the interdisciplinary nature of environmental engineering that seeks to quantify physical, biological, and chemical processes in the environment in an integrated way. Environmental Engineering research is also conducted in numerous centers and groups in the department including the Environmental Informatics Group, the National Performance of Dams Program (NPDP), and the center for Sustainable Development and Global Competitiveness (SDGC). There is also extensive collaboration with research centers and groups throughout the university, including the Woods Institute for the Environment, the Bill Lane Center for the American West, the Carnegie Institution, the Center for Innovation in Global Health, Stanford Bio-X, the Environmental and Natural Resources Law and Policy Program, the Stanford University Institute for Energy, the Center for Innovation in Global Health, Stanford Bio-X, the Environmental and Natural Resources Law and Policy Program, the Freeman Spogli Institute for International Studies, and the Precourt Institute for Energy.

Courses in the Environmental Modeling and Simulation, Environmental and Geophysical Fluid Mechanics, and Hydrology and Water Resources focus areas concentrate on developing an understanding of the physical processes controlling the movement of mass, energy, and momentum in aquatic environments and the atmosphere. Specific course topics include experimental methods, fluid transport and mixing processes, the fluid mechanics of stratified flows, natural flows in coastal waters, estuaries, lakes, and open channels, and turbulence and its modeling.

Courses in the Aquatic Chemistry and Biology, Process Engineering, and Human Health and the Environment focus areas emphasize the chemical, biological, and engineering aspects of air and water quality and pollution fate and transport, along with characterizing human health risks and developing testing strategies to protect public health. Specific course topics include chemical principles and their application to the analysis and solution of problems in aqueous environments, biochemical and biophysical principles of biochemical reactions, physical and chemical unit operations for water treatment, microbial processes for the transformation of environmental contaminants, microbial metabolic pathways in microbial bioenergy systems, the movement and survival of pathogens in the environment, use of microbial bioreactors for degradation of contaminants and recovery of clean water, quantification of human exposure to toxic chemicals and pathogens in the environment, methods to enumerate and isolate organisms used to assess risk of enteric illnesses in drinking and recreational waters, and the impacts of water supply and wastewater management approaches on public health around the globe.

**Sustainable Built Environment Program**

The Sustainable Built Environment program includes subprograms in Structural Engineering and Geomechanics, and Sustainable Design and Construction. These programs focus on educating practitioners and researchers to plan, design, build, and operate more sustainable buildings and infrastructure.

The Structural Engineering and Geomechanics (SEG) subprogram educates designers and researchers who want to progress beyond traditional life safety code-based design, to develop and disseminate performance-based structural and geotechnical engineering methods and tools that maximize the lifecycle economic value of facilities.

The Sustainable Design and Construction (SDC) subprogram provides courses in sustainable, multi-stakeholder design methods and tools that incorporate lifecycle assessment, project planning and entitlement, green architectural design, lighting, and energy analysis, power systems, transportation, water supply and wastewater treatment to educate students interested in promoting more sustainable development of buildings and infrastructure.

Admission is managed separately for these two subprograms; prospective students should indicate their preference on their application.

**Structural Engineering and Geomechanics**

The Structural Engineering and Geomechanics (SEG) subprogram encompasses teaching and research in structural design and analysis, structural materials, earthquake engineering and structural dynamics, advanced sensing and structural health monitoring, risk and reliability analysis, computational science and engineering, solid mechanics, computational mechanics, and geomechanics. The SEG subprogram prepares students for industrial or academic careers.

Students can balance engineering fundamentals with modern computational and experimental methods to customize programs to launch careers as consultants on large and small projects, designers, and engineering analysts.

Structural design and analysis focuses on the conceptual design of structural systems and on computational methods for predicting the static and dynamic, linear and nonlinear responses of structures.
Structural materials research and teaching focuses on the design and analysis of high-performance as well as low-environmental impact materials.

Earthquake engineering and structural dynamics addresses earthquake phenomena, ground shaking, and the behavior, analysis, and design of structures under seismic and other dynamic forces.

Reliability and risk analysis focuses on assessing damage and losses to structures and lifeline systems under earthquakes, wind and other hazards; insights from these assessments are used to engineer more sustainable structures and more resilient communities.

Computational science and engineering emphasizes the application of modern computing methods to structural engineering and geomechanics, and encompasses numerical, structural, and geotechnical analysis.

In the area of geomechanics, students focus on the application of the principles of computational and applied mechanics to problems involving geologic materials including soil and rock, as well as on the use of computational methods for analysis and design of foundations and earth structures.

**Sustainable Design and Construction**
The Sustainable Design and Construction (SDC) subprogram prepares students for careers in planning, designing, building, and operating sustainable buildings and infrastructure to maximize their lifecycle economic value, their net contribution to environmental functions and services, and their social equity. To give students the breadth and depth necessary to become leaders in practice or research in sustainable design and construction, the SDC program offers four tracks of study: construction, energy, structures, and water. In addition to providing critical skills and the necessary industry context, each track offers courses in the following areas of competency: Building and infrastructure development; structural performance, design, and analysis; water infrastructure systems; energy systems, energy efficiency, and atmosphere; and construction engineering and management.

Classes address advanced topics like cutting-edge information technology, metrics and tools to enhance lifecycle sustainability of the sustainable built environment, sensor networks embedded in intelligent buildings and infrastructure, strategy, economics, entrepreneurship and organization design for new businesses, and corporate or governmental initiatives aimed at enhancing the sustainability of buildings and infrastructure.

The SDC subprogram is intended for students with undergraduate degrees in architecture, engineering, science, construction management, economics or business who wish to pursue careers that enhance the sustainability of the built environment.

Employers of past SDC graduates include: architectural and engineering design firms, constructors, design-build firms and developers focused on delivering green buildings and infrastructure; energy and sustainability consultants; facility management or sustainability departments within large companies; clean-tech start ups, and clean-tech venture funds.

**SDC Construction (SDC-C)**
The SDC-C track includes courses in construction engineering and management and introduces advanced modeling and visualization methods and tools known as virtual design and construction. This track prepares technically qualified students for responsible engineering and management roles in all phases of the development of major constructed facilities. It emphasizes management techniques useful in organizing, planning, and controlling the activities of diverse specialists working within the unique project environment of the construction industry, and it covers construction engineering aspects of heavy, industrial and building construction. Additional related course work is available from other programs within the department, from other engineering departments, and from other schools in the University such as Earth Sciences and the Graduate School of Business. SDC-C allows students substantial flexibility to tailor their program of study for careers with general contractors, specialty contractors, real estate or infrastructure developers or facility owners and operators.

**SDC-Energy (SDC-E)**
The SDC-Energy (SDC-E) track includes courses on design and construction of buildings and infrastructure systems to produce, distribute and consume energy sustainably. SDC-E prepares students for careers in design and construction of building energy systems, renewable power generating systems, and smart power grids connected to smart buildings and infrastructure, cleantech venture capital, sustainability-focused public policy, green real estate development, and sustainability management positions.

SDC-E includes courses from the CEE department and several other departments at Stanford on sustainable HVAC design and construction of small scale and large structures, the planning, design and construction of renewable power systems, and sensing and control technologies to link integrated smart grids with intelligent buildings, data centers and infrastructure systems.

**SDC-Structures (SDC-S)**
The SDC-Structures (SDC-S) track includes courses from construction engineering and management and Structural Engineering and Geomechanics (SEG) to prepare students for careers in design and construction firms that provide integrated design-build project delivery, construction management, and pre-construction services.

This track prepares students for multidisciplinary collaborative teamwork in an integrated design and construction process. The subprogram extends a student’s design or construction background with core courses in each of these areas and develops the background needed to understand the concerns and expertise of the many project stakeholders. It includes a comprehensive project-based learning experience.

The SDC-S track is intended for applicants with backgrounds in engineering and science. Applicants should also have a background in the planning, design, or construction of facilities by virtue of work experience and/or their undergraduate education. Knowledge in subjects from the traditional areas of civil engineering is necessary for students to receive the degree and to satisfy prerequisite requirements for some of the required graduate courses. Students with an undergraduate degree in Civil Engineering, and who expect to pursue careers with design or construction firms that emphasize design-build, EPC, or turnkey projects should consider SDC-S.

**SDC-Water (SDC-W)**
The SDC-Water (SDC-W) track combines courses from our department’s Environmental Engineering program with courses on sustainable design and construction methods and tools. The SDC-W track prepares students for careers in sustainable design, construction and operation of both centralized systems and emerging distributed systems for water supply and water and waste treatment that integrate the production of energy and a grown stream of valuable bio-engineered products recovered from the waste stream.

This track offers courses in physical and chemical treatment processes for water and wastewater treatment, environmental biotechnology for use in water resource management and bioremediation, watershed and wetland management, environmental engineering design, and sustainable water resource development.

This track is intended for students with a background and interest in environmental engineering and fluid mechanics who wish to pursue careers in the development and delivery of sustainable water and waste treatment facilities with large integrated design-build firms or progressive governmental agencies in this sector. Students wishing to focus on the physics, biology or chemistry of water resources engineering and treatment, or looking to become a practicing Environmental Engineer,
should enroll in the Environmental Engineering program. Students in the
Environmental Engineering MS program may consult with their program
adviser to design a program of study that focuses on environmental
engineering while including relevant courses in the SDC-W track.

Bachelor of Science in Civil Engineering

The B.S. in Civil Engineering is an ABET accredited program, which
integrates research with engineering education. The B.S. in Civil
Engineering offers the opportunity to focus on structures and
construction, or on environmental and water studies. Three educational
objectives structure the Civil Engineering degree program. Graduates of
the program are expected within a few years of graduation to have the
ability to:

1. Establish themselves as practicing professionals in civil or
environmental engineering or a related field.
2. Pursue graduate study in civil or environmental engineering or other
fields.
3. Work effectively as responsible professionals alone or in
teams handling increasingly complex professional and societal
expectations.

Students who major in Civil Engineering must complete the appropriate
requirements for the B.S. degree listed. Each student has elective units,
which may be used in any way the student desires, including additional
studies in the department of Civil and Environmental Engineering or any
other school or department in the University. Because the undergraduate
ingineering curriculum provides breadth of study, students who intend to
enter professional practice in civil engineering should plan to obtain their
professional education at the graduate level.

A number of undergraduate programs at Stanford may be of interest to
students seeking to specialize in environmental studies. In addition to
the Environmental and Water Studies track within the Civil Engineering
major, students may consider related programs in the department such as
Atmosphere/Energy and Environmental Systems Engineering, as well as
programs offered in other departments and schools such as Earth
Systems, Geological and Environmental Sciences, Urban Studies, and
Human Biology.

Civil Engineering (CE)

Completion of the undergraduate program in Civil Engineering leads to
the conferral of the Bachelor of Science in Civil Engineering.

Mission of the Undergraduate Program in
Civil Engineering

The mission of the undergraduate program in Civil Engineering is to
provide students with the principles of engineering and the
methodologies necessary for civil engineering practice. This pre-
professional program balances the fundamentals common to many
specialties in civil engineering and allows for concentration in structures
and construction or environmental and water studies. Students in the
major learn to apply knowledge of mathematics, science, and civil
engineering to conduct experiments, design structures and systems
to creatively solve engineering problems, and communicate their
ideas effectively. The curriculum includes course work in structural,
construction, and environmental engineering. The major prepares
students for careers in consulting, industry and government, as well as
for graduate studies in engineering.

Specialty courses in either:

- Environmental and Water Studies (see below)
- Structures and Construction (see below)
- Other School of Engineering Electives | 3-0 |

Total Units | 109-111 |

1. Mathematics must include CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers (or Math 51 Linear Algebra and Differential Calculus of Several Variables and MATH 53 Ordinary Differential Equations with Linear Algebra) and a Statistics course. Science must include Physics 41 Mechanics; either ENGR 31 Chemical Principles with Application to Nanoscale Science and Technology, CHEM 31A Chemical Principles I or CHEM 31X Chemical Principles; two additional quaters in either chemistry or physics, and GS 1A Introduction to Geology. The Physical Science of the Earth (or GS 1B or 1C); for students in the Environmental and Water Studies track, the additional chemistry or physics must include CHEM 33; for students in the Structures and Construction track, it must include PHYSICS 43 or 45. Please note that the only quarter GS 1A is offered for AY 2015-16 is Spring Quarter.

2. Chosen TiS class must specifically include an ethics component, as indicated in Figure 3-3 in the Engineering Undergraduate Handbook (http://web.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Handbooks)

3. CEE 100 meets the Writing in the Major (WIM) requirement

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

**Bachelor of Science in Environmental Systems Engineering**

For undergraduate studies focusing on Environmental Engineering, two options are available. The undergraduate Civil Engineering major (which is ABET-accredited) offers an Environmental & Water Studies track, and the new Environmental Systems Engineering major (which is not ABET-accredited) offers a choice of focusing on coastal environments, freshwater environments, or urban environments.

**Environmental Systems Engineering (EnvSE)**

Completion of the undergraduate program in Environmental Systems Engineering leads to the conferral of the Bachelor of Science in Environmental Systems Engineering.

**Mission of the Undergraduate Program in Environmental Systems Engineering**

The mission of the undergraduate program in Environmental Systems Engineering is to prepare students for incorporating environmentally sustainable design, strategies and practices into natural and built systems and infrastructure involving buildings, water supply, and coastal regions. Courses in the program are multidisciplinary in nature, combining math/science/engineering fundamentals, and tools and skills considered essential for an engineer, along with a choice of one of three focus areas for more in-depth study: coastal environments, freshwater environments, or urban environments. This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the twenty-first century involving natural and built environments, in consulting and industry as well as in graduate school.

**Requirements**

**Mathematics and Science**
See Basic Requirement 1 and 2

**Technology in Society (TiS)**
One 3-5 unit course required, course chosen must be on the SoE Approved Courses list at <ughb.stanford.edu> the year taken; see Basic Requirement 4

**Engineering Fundamentals**
Urban Environments Focus Area (37 units)

**Required**

- CEE 100 Managing Sustainable Building Projects 4
- CEE 101B Mechanics of Fluids 4
- CEE 146S Engineering Economics and Sustainability 3
- CEE 176A Energy Efficient Buildings 3-4

**Electives** (at least two of the 4 areas below must be included)

- Building Systems
  - CEE 102 Legal Principles in Design, Construction, and Project Delivery 3
  - CEE 130 Architectural Design: 3-D Modeling, Methodology, and Process 5
  - CEE 156 Building Systems 4
  - CEE 161C Natural Ventilation of Buildings 3
- Energy Systems
  - CEE 107A Understanding Energy 4-5
  - CEE 176B Electric Power: Renewables and Efficiency 3-4
  - EE 151 Sustainable Energy Systems 3
  - ENERGY 171 Energy Infrastructure, Technology and Economics 3
  - ENERGY 191 Optimization of Energy Systems 3-4

**Water Systems**

- CEE 165C Water Resources Management 3
- CEE 166A Watersheds and Wetlands 4
- CEE 166B Floods and Dams and Aqueducts 4
- CEE 174A Providing Safe Water for the Developing and Developed World 3
- CEE 174B Wastewater Treatment: From Disposal to Resource Recovery 3

**Urban Planning, Design, Analysis**

- CEE 6 Physics of Cities 3
- CEE 171 Environmental Planning Methods 3
- or
- CEE 265E Adaptation to Sea Level Rise and Extreme Weather Events 3
- CEE 177L Smart Cities & Communities 3
- URBANST 113 Introduction to Urban Design: Contemporary Urban Design in Theory and Practice 5
- or
- URBANST 164 Sustainable Cities 4-5
- or
- URBANST 165 Sustainable Urban and Regional Transportation Planning 4-5

**Capstone (one class required)**

- CEE 112A Industry Applications of Virtual Design & Construction 3-4
- CEE 122A Computer Integrated Architecture/Engineering/Construction 2
- CEE 122B Computer Integrated A/E/C 2
- CEE 131D Urban Design Studio 5
- CEE 141A Infrastructure Project Development 3
- CEE 141B Infrastructure Project Delivery 3
- CEE 224X Disasters, Decisions, Development in Sustainable Urban Systems (CEE) 3-5
- CEE 224Y Sustainable Urban Systems Project 3-5
- CEE 224Z Sustainable Urban Systems Project 3-5
- CEE 226E Advanced Topics in Integrated, Energy-Efficient Building Design 3
- CEE 243 Intro to Urban Sys Engrg 3
- CEE 199 Undergraduate Research in Civil and Environmental Engineering 3-4

Freshwater Environments Focus Area (37 units)

**Required**

- CEE 70 Environmental Science and Technology 3
  - (if not counted as 3rd Engineering fundamental)
- CEE 101B Mechanics of Fluids 4
- CEE 177 Aquatic Chemistry and Biology 4
- CEE 166A Watersheds and Wetlands 4
- or
- CEE 174A Providing Safe Water for the Developing and Developed World 3

**Electives**

- CEE 162E Rivers, Streams, and Canals 3
- CEE 165C Water Resources Management 3
- CEE 166A Watersheds and Wetlands (if not counted as a req’d course) 4
- CEE 166B Floods and Dams and Aqueducts 4
### Oceanography Focus Area (16 units)

- **CEE 166D** Water Resources and Water Hazards Field Trips 2
- **CEE 171** Environmental Planning Methods 3
- **CEE 257** Adaptation to Sea Level Rise and Extreme Weather Events 3
- **CEE 174A** Providing Safe Water for the Developing and Developed World 3
- **CEE 174B** Wastewater Treatment: From Disposal to Resource Recovery 3
- **CEE 179A** Water Chemistry Laboratory 3
- **CEE 265A** Sustainable Water Resources Development 3
- **CEE 265D** Water and Sanitation in Developing Countries 3
- **BIOHOPK 150H** Ecological Mechanics 3
- **GEOGPHYS 191** Observing Freshwater 3
- **GS 130** Soil Physics and Hydrology 3
- **OSPAUSTL 25** Freshwater Systems 3

### Capstone (1 class required)

- **CEE 126** International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development 4-5
- **CEE 141A** Infrastructure Project Development 3
- **CEE 169** Environmental and Water Resources Engineering Design 5
- **CEE 179C** Environmental Engineering Design 5
- **CEE 224X** Disasters, Decisions, Development in Sustainable Urban Systems (CEE) 1-5
- **CEE 224Y** Sustainable Urban Systems Project 3-5
- **CEE 224Z** Sustainable Urban Systems Project 3-5
- **BIOHOPK 168H** Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations 3
- **CEE 199** Undergraduate Research in Civil and Environmental Engineering 3-4

### Coastal Environments Focus Area (37 units)

#### Required

- **CEE 70** Environmental Science and Technology 3 (if not counted as 3rd Engineering fundamental)
- **CEE 101B** Mechanics of Fluids 4
- **CEE 162F** Coastal Engineering 3
- **CEE 175A** California Coast: Science, Policy, and Law 3-4

#### Electives

- **CEE 162I** Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation 3
- **CEE 166A** Watersheds and Wetlands 4
- **CEE 166B** Floods and Droughts, Dams and Aqueducts 4
- **CEE 171** Environmental Planning Methods 3
- **CEE 257** Adaptation to Sea Level Rise and Extreme Weather Events 3
- **CEE 174A** Providing Safe Water for the Developing and Developed World 3
- **CEE 174B** Wastewater Treatment: From Disposal to Resource Recovery 3
- **CEE 177** Aquatic Chemistry and Biology 4
- **CEE 272** Coastal Contaminants 3-4
- **BIO 30** Ecology for Everyone 4
- **BIOHOPK 172H** Marine Ecology: From Organisms to Ecosystems 5
- **EARTHSYS 116** Ecology of the Hawaiian Islands 4
- **OSPAUSTL 10** Coral Reef Ecosystems 3

or

- **ESS 8** The Oceans: An Introduction to the Marine Environment 4
- **ESS 8** Stanford at Sea 16
- **EARTHSYS 141** Remote Sensing of the Oceans 3-4
- **EARTHSYS 151** Biological Oceanography 3-4

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

### Honors Program

This program leads to a B.S. with honors for undergraduates majoring in Civil Engineering or in Environmental Systems Engineering. It is designed to encourage qualified students to undertake a more intensive study of civil and environmental engineering than is required for the normal majors through a substantial, independent research project.

The program involves an in-depth research study in an area proposed to and agreed to by a Department of Civil and Environmental Engineering faculty adviser and completion of a thesis of high quality. A written proposal for the research to be undertaken must be submitted and approved by the faculty adviser in the fourth quarter prior to graduation. At the time of application, the student must have an overall grade point average (GPA) of at least 3.3 for course work at Stanford; this GPA must be maintained to graduation. The thesis is supervised by a CEE faculty adviser and must involve input from the School of Engineering writing program by means of ENGR 2025 Directed Writing Projects or its equivalent. The written thesis must be approved by the thesis adviser.

Students are encouraged to present their results in a seminar for faculty and students. Up to 10 units of CEE 199H Undergraduate Honors Thesis, may be taken to support the research and writing (not to duplicate ENGR 2025). These units are beyond the normal Civil Engineering or Environmental Systems Engineering major program requirements.

### Minor in Civil Engineering or Environmental Systems Engineering

The department offers a minor in Civil Engineering and a minor in Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The courses required for the minors typically have prerequisites. Minors are not ABET-accredited programs.
Civil Engineering (CE) Minor
The civil engineering minor is intended to give students a focused introduction to one or more areas of civil engineering. Departmental expertise and undergraduate course offerings are available in the areas of Architectural Design, Construction Engineering and Management, and Structural and Geotechnical Engineering. Students interested in Environmental and Water Studies should refer to the Environmental Systems Engineering minor.

The minimum prerequisite for a civil engineering minor is MATH 19 Calculus (or MATH 20 Calculus or MATH 21 Calculus); however, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. The minimum prerequisite for a Civil Engineering minor focusing on architectural design is MATH 19 Calculus (or MATH 20 Calculus or MATH 21 Calculus) and a course in Statistics. Students should recognize that a minor in civil engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining a civil engineering minor, and the field itself is so broad, no single set of course requirements will be appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information, including example minor programs, are provided on the CEE web site (http://cee.stanford.edu/prospective/minor_overview.html) and in Chapter 6 of the Handbook for Undergraduate Engineering Programs (http://ugbh.stanford.edu).

General guidelines are:
1. A civil engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
2. The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are given on the CEE webpage.

Professor Anne Kiremidjian (kiremidjian@stanford.edu) is the CEE undergraduate minor adviser in Structural Engineering and Construction Engineering and Management. John Barton (jhbarton@stanford.edu) is the undergraduate minor adviser in Architectural Design. Students must consult the appropriate adviser when developing their minor program, and obtain approval of the finalized study list from them.

Environmental Systems Engineering (EnvSE) Minor
The Environmental Systems Engineering minor is intended to give students a focused introduction to one or more areas of Environmental Systems Engineering. Departmental expertise and undergraduate course offerings are available in the areas of environmental engineering and science, environmental fluid mechanics and hydrology, and atmosphere/energy. The minimum prerequisite for an Environmental Systems Engineering minor is MATH 19 Calculus (or MATH 20 Calculus or MATH 21 Calculus); additionally, many courses of interest require PHYSICS 41 Mechanics and/or MATH 51 Linear Algebra and Differential Calculus of Several Variables as prerequisites. Students should recognize that a minor in Environmental Systems Engineering is not an ABET-accredited degree program.

Since undergraduates having widely varying backgrounds may be interested in obtaining an Environmental Systems Engineering minor, no single set of course requirements is appropriate for all students. Instead, interested students are encouraged to propose their own set of courses within the guidelines listed below. Additional information on preparing a minor program is available in the Undergraduate Engineering Handbook (http://web.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Handbooks).

General guidelines are—
- An Environmental Systems Engineering minor must contain at least 24 units of course work not taken for the major, and must consist of at least six classes of at least 3 units each of letter-graded work, except where letter grades are not offered.
- The list of courses must represent a coherent body of knowledge in a focused area, and should include classes that build upon one another. Example programs are available on the CEE web site (https://cee.stanford.edu/academics/undergraduate-programs/minor).

Professor Nicholas Ouellette (nto@stanford.edu) is the CEE undergraduate minor adviser in Environmental Systems Engineering. Students must consult with Professor Ouellette (https://cee.stanford.edu/people/nicholas-t-ouellette) in developing their minor program, and obtain approval of the finalized study list from him.

Coterminal M.S. Program in Civil and Environmental Engineering
Stanford undergraduates who wish to continue their studies for the Master of Science degree in the coterminal program at Stanford must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit their application no later than the quarter prior to the expected completion of their undergraduate degree and are expected to meet the Department of Civil and Environmental Engineering application deadlines for coterminal applicants for graduate study (the third Friday of January). Applications are considered once a year during Winter Quarter. An application must display evidence of potential for strong academic performance as a graduate student.

It is recommended that students who contemplate advanced study at Stanford discuss their plans with their advisers in the junior year.

University Coterminal Requirements
Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree
Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

**Master of Science in Civil and Environmental Engineering**

The following programs are available leading to the M.S. degree in Civil and Environmental Engineering:

- Atmosphere/Energy
- Environmental Engineering
- Structural Engineering and Geomechanics
- Sustainable Design and Construction

Students admitted to graduate study with a B.S. in Civil Engineering, or equivalent, from an accredited curriculum can satisfy the requirements for the M.S. degree in Civil and Environmental Engineering by completing a minimum of 45 units beyond the B.S. All 45 units must be taken at Stanford. A minimum 2.75 grade point average (GPA) is required for candidates to be recommended for the M.S. degree. No thesis is required.

The program of study must be approved by the faculty of the department and should include at least 45 units of courses in engineering, mathematics, science, and related fields unless it can be shown that other work is pertinent to the student’s objectives. Additional program area requirements are available on the department web site and from the department’s student services office (Y2E2 room 316).

Candidates for the M.S. in Civil and Environmental Engineering who do not have a B.S. in Civil Engineering may, in addition to the above, be required to complete those undergraduate courses deemed important to their graduate programs. In such cases, more than three quarters is often required to obtain the degree.

**Engineer in Civil and Environmental Engineering**

A student with an M.S. in Civil Engineering may satisfy the requirements of the degree of Engineer in Civil and Environmental Engineering by completing 45 unduplicated course work and research units for a total of 90 units. Engineer candidates must submit an acceptable thesis (12-15 units) and maintain a minimum GPA of 3.0. The program of study must be approved by a faculty member in the department.

This degree is recommended for those desiring additional graduate education, especially those planning a career in professional practice. The thesis normally should be started in the first quarter of graduate study after the M.S. degree. Programs are offered in the fields of specialization mentioned for the M.S. degree. For students who will continue study toward a CEE Ph.D., the Engineer thesis topic must be significantly different from their doctoral research.

Graduate students who lack adequate background in their area of specialization (e.g., lack a prior degree in civil engineering, if required in their program) or who are not full-time students should expect to be enrolled for more than two years. Engineer degree candidates should develop individually tailored expected-progress timetables in consultation with their program advisers.

For graduate students not currently attending Stanford, admission to study for the Engineer degree in the Department of Civil and Environmental Engineering begins with the office of Graduate Admissions (http://www.stanford.edu/home/admission/index.html).

If you are currently pursuing a graduate degree at Stanford, and wish to apply for the Engineer degree program, submit an Application for Post-Masters Study (available in the department office, Y2E2 Room 314). This form is typically filed during your second quarter of graduate study, by

January 15, so that your application may be reviewed during the normal graduate admissions cycle. You may apply at a later date if your adviser feels that it is appropriate to do so.

A minimum of 90 quarter units of full-time graduate study (or equivalent part-time graduate study) is required for the Engineer degree. For most students, the master’s degree supplies 45 of these units.

If your master’s degree was obtained at another school, you can apply to transfer up to 45 quarter units of residency credit by completing an Application for Transfer Credit for Graduate Work Done Elsewhere. No units need to be transferred if you hold an M.S. degree from Stanford.

**Doctor of Philosophy in Civil and Environmental Engineering**

The Ph.D. is offered under the general regulations of the University as set forth in the “Graduate Degrees” section of this bulletin. This degree is recommended for those who expect to engage in a professional career in research, teaching, or technical work of an advanced nature. The Ph.D. program requires a total of 135 units of graduate study, at least 90 units of which must be at Stanford. Up to 45 units of graduate study can be represented by the M.S. program described above. Additionally, up to 45 units of graduate study can be represented by the Engineer (ENG) program as described above if both the M.S. and ENG units were all completed at Stanford. Students must maintain a minimum GPA of 3.0 in post-M.S. course work. All candidates for the Ph.D. degree are required to complete CEE 200 in conjunction with a one-quarter teaching assistantship/course assistantship to gain training and instructional experience. Further information on Ph.D. requirements and regulations is found in the department Graduate Handbook.

The program of study is arranged via consultation between the prospective candidate and their dissertation research adviser. This program of study considers the interests of the student, and the background needed for their thesis topic, within the framework of the requirements of the department and the University.

By the end of a student’s fourth quarter as an enrolled PhD student, excluding summers, the student is expected to pass the department’s General Qualifying Examination (GQE) to be admitted to candidacy for the doctoral degree. The purpose of the GQE is to ensure that the student is adequately prepared to undertake doctoral research and has a well planned research topic. The exam include (1) a written and/or oral general examination of the candidate’s doctoral major field, (2) a presentation and defense of the candidate’s doctoral research dissertation proposal, or (3) a combination research proposal and general examination. The GQE is administered by an advisory committee consisting of at least three Stanford faculty members, including a chair who is a faculty member in Civil and Environmental Engineering. All members are normally on the Stanford Academic Council. A petition for appointment of one advisory committee member who is not on the Academic Council may be made if the proposed person contributes an area of expertise that is not readily available from the faculty. Such petitions are subject to approval by the department chair. When the primary research adviser is not a member of the CEE Academic Council faculty, the committee must consist of four examiners, with a minimum of two members who are Academic Council faculty in the CEE department.

**Ph.D. Minor in Civil and Environmental Engineering**

A Ph.D. minor is a program outside a major department. Requirements for a minor are established by the minor department. Acceptance of the minor as part of the total Ph.D. program is determined by the major department. Application for the Ph.D. minor must be approved by both the major and the minor department, and the minor department must be represented at the University oral examination.
A student desiring a Ph.D. minor in Civil and Environmental Engineering (CEE) must have a minor program adviser who is both a CEE faculty member and a member of the Academic Council. The faculty member must be in the program of the designated minor subfield of CEE. This adviser must be a member of the student's University oral examination committee and the reading committee for the doctoral dissertation.

The program must include at least 20 units of graduate-level course work (courses numbered 200 or above, excluding special studies and thesis) in CEE completed at Stanford University. Units taken for the minor cannot be counted as part of the 45 unduplicated units for the PhD major. The list of courses must form a coherent program and must be approved by the minor program adviser and the CEE chair. A minimum GPA of 3.0 must be achieved in these courses.

Chair: Lynn M. Hildemann

Associate Chairs: Ronaldo I. Borja, Raymond E. Levitt

Associate Professors: Jack W. Baker, Jennifer Davis, David L. Freyberg, Oliver B. Fringer (on leave Autumn), Michael D. Lepech, Nicholas T. Ouellette

Assistant Professors: Catherine Gorlé, Rishee Jain, Christian Linder, Ram Rajagopal

Courtesy Professor: Peter M. Pinsky

Courtesy Associate Professor: Margot G. Gerritsen, Leif Thomas

Courtesy Assistant Professor: Jenny Suckale

Senior Lecturer: John Barton

Lecturers: Vivanco Antolin, Michael Azgour, Deborah Ballati, Thomas Beischer, Michael Bennon, Beverly Choe Harris, Stanley Christensen, Kyle Douglas, Derek Fong, Renate Frucher, Diana Ginebaugh, Darryl Goodson, Robert Groves, James Hawk, Kenneth Hayes, Daniel Johnson, Glenn Katz, David Kleiman, Karl Knapp, Nelson Koen Cohen, John Koester, Royal Kopperud, Amy Larimer, Eloi Laurent, Sophie Maisnier-Patin, Pedram Mokrian, Derek Ouyang, Jose Luis Moscovitch, Brian O’Kelly, Allison Pleja, Alexander (Sandy) Robertson, Peter Rumsey, Bill Shelandor, Bryan Shiles, Robert Soden, Charlotte Stanton, J.B. Straubel, Hattie Stroud, Isabella Tomanek, Allison Williams, Peter Williams, Ethen J. Wood

Adjunct Lecturers: Leo Chow, Charles Debbas, Erik Kolderup, Mark Sarkisian, Peter Rumsey, Robert Soden, Kristen Stasio, Christopher Wasney

Adjunct Associate Professors: Jordan Brandt, Gloria T. Lau, Colin Ong

Adjunct Assistant Professor: Patrick Shiel

UPS Visiting Professor: Patrick Shiel

Visiting Professor: Ronita Bardhan

* Recalled to active duty.

** Overseas Studies Courses in Civil and Environmental Engineering**

The Bing Overseas Studies Program (http://bosp.stanford.edu) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Note: OSPAUSTL 10 may count towards the ENVEN-BS and the CE-BS with Specialty in Environmental & Water Studies, however it does not count towards the CE-BS with Specialty in Structures & Construction.
**COMPUTER SCIENCE**

Courses offered by the Department of Computer Science are listed under the subject code CS on the Stanford Bulletin’s ExploreCourses web site.

The Department of Computer Science (CS) operates and supports computing facilities for departmental education, research, and administration needs. All CS students have access to the departmental student machine for general use (mail, news, etc.), as well as computer labs with public workstations located in the Gates Building. In addition, most students have access to systems located in their research areas.

Each research group in Computer Science has systems specific to its research needs. These systems include workstations (PCs, Macs), multi-CPU computer clusters, and local mail and file servers. Servers and workstations running Linux or various versions of Windows are commonplace. Support for course work and instruction is provided on systems available through U (http://itservices.stanford.edu) University IT (https://uit.stanford.edu) (UIT) and the School of Engineering (http://engineering.stanford.edu) (SoE).

**Mission of the Undergraduate Program in Computer Science**

The mission of the undergraduate program in Computer Science is to develop students' breadth of knowledge across the subject areas of computer science, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, and the corporate sector, and for graduate study.

**Learning Outcomes (Undergraduate)**

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department’s undergraduate program. Students are expected to be able to:

1. Apply the knowledge of mathematics, science, and engineering.
2. Design and conduct experiments, as well to analyze and interpret data.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Function on multidisciplinary teams.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Demonstrate a working knowledge of contemporary issues.
10. Apply the techniques, skills, and modern engineering tools necessary for engineering practice.
11. Transition from engineering concepts and theory to real engineering applications.

**Learning Outcomes (Graduate)**

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work in the foundational elements of the field and in at least one graduate specialization. Areas of specialization include artificial intelligence, biocomputation, computer and network security, human-computer interaction, information management and analytics, mobile and internet computing, real-world computing, software theory, systems, and theoretical computer science.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Computer Science and related fields.

**Graduate Programs in Computer Science**

The University’s basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 50)" section of this bulletin.

**Computer Science Course Catalog Numbering System**

The first digit of a CS course number indicates its general level of sophistication:

<table>
<thead>
<tr>
<th>Digit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>001-099</td>
<td>Service courses for nontechnical majors</td>
</tr>
<tr>
<td>100-199</td>
<td>Other service courses, basic undergraduate</td>
</tr>
<tr>
<td>200-299</td>
<td>Advanced undergraduate/beginning graduate</td>

**Bachelor of Science in Computer Science**

The department offers both a major in Computer Science and a minor in Computer Science. Further information is available in the *Handbook for Undergraduate Engineering Programs* published by the School of Engineering. The Computer Science major offers a number of tracks (programs of study) from which students can choose, allowing them to focus their program on the areas of most interest. These tracks also reflect the broad diversity of areas in computing disciplines. The department has an honors program.

In addition to Computer Science itself, Stanford offers several interdisciplinary degrees with a substantial computer science
component. The Symbolic Systems major (in the School of Humanities and Sciences) offers an opportunity to explore computer science and its relation to linguistics, philosophy, and psychology. The Mathematical and Computational Sciences major (also Humanities and Sciences) allows students to explore computer science along with more mathematics, statistics, and operations research.

Computer Science (CS)

Completion of the undergraduate program in Computer Science leads to the conferral of the Bachelor of Science in Computer Science.

Mission of the Undergraduate Program in Computer Science

The mission of the undergraduate program in Computer Science is to develop students’ breadth of knowledge across the subject areas of computer science, including their ability to apply the defining processes of computer science theory, abstraction, design, and implementation to solve problems in the discipline. Students take a set of core courses. After learning the essential programming techniques and the mathematical foundations of computer science, students take courses in areas such as programming techniques, automata and complexity theory, systems programming, computer architecture, analysis of algorithms, artificial intelligence, and applications. The program prepares students for careers in government, law, the corporate sector, and for graduate study.

Requirements

Mathematics (26 units minimum)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 103</td>
<td>Mathematical Foundations of Computing</td>
<td>5</td>
</tr>
<tr>
<td>CS 109</td>
<td>Introduction to Probability for Computer Scientists</td>
<td>5</td>
</tr>
<tr>
<td>MATH 19</td>
<td>Calculus</td>
<td>3</td>
</tr>
<tr>
<td>MATH 20</td>
<td>Calculus</td>
<td>3</td>
</tr>
<tr>
<td>MATH 21</td>
<td>Calculus</td>
<td>4</td>
</tr>
<tr>
<td>Plus two electives</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Science (11 units minimum)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYSICS 41</td>
<td>Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>PHYSICS 43</td>
<td>Electricity and Magnetism</td>
<td>4</td>
</tr>
<tr>
<td>Science elective</td>
<td></td>
<td>3</td>
</tr>
</tbody>
</table>

Technology in Society (3-5 units)—

One course; course chosen must be on the SoE Approved Courses list at <ughb.stanford.edu> the year taken; see Basic Requirements 4 in the School of Engineering section

Engineering Fundamentals (13 units minimum; see Basic Requirement 3 in the School of Engineering section)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 106B</td>
<td>Programming Abstractions</td>
<td>5</td>
</tr>
<tr>
<td>or CS 106X</td>
<td>Programming Abstractions (Accelerated)</td>
<td></td>
</tr>
<tr>
<td>ENGR 40M</td>
<td>An Intro to Making: What is EE (or ENGR 40A and ENGR 40B)</td>
<td>3-5</td>
</tr>
<tr>
<td>Fundamentals Elective</td>
<td></td>
<td>3-5</td>
</tr>
</tbody>
</table>

*Students who take ENGR 40A or 40M for fewer than 5 units are required to take 1-2 additional units of ENGR Fundamentals (13 units minimum), or 1-2 additional units of Depth (27 units minimum for track and elective courses).

Writing in the Major—

Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 181W</td>
<td>Computers, Ethics, and Public Policy</td>
</tr>
</tbody>
</table>

CS 191W Writing Intensive Senior Project
CS 194W Software Project
CS 210B Software Project Experience with Corporate Partners
CS 294W Writing Intensive Research Project in Computer Science

Computer Science Core (15 units)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 107</td>
<td>Computer Organization and Systems</td>
<td>5</td>
</tr>
<tr>
<td>or CS 107E</td>
<td>Computer Systems from the Ground Up</td>
<td></td>
</tr>
<tr>
<td>CS 110</td>
<td>Principles of Computer Systems</td>
<td>5</td>
</tr>
<tr>
<td>CS 161</td>
<td>Design and Analysis of Algorithms</td>
<td>5</td>
</tr>
</tbody>
</table>

Senior Project (3 units)—

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 191</td>
<td>Senior Project</td>
<td></td>
</tr>
<tr>
<td>CS 191W</td>
<td>Writing Intensive Senior Project</td>
<td></td>
</tr>
<tr>
<td>CS 194</td>
<td>Software Project</td>
<td></td>
</tr>
<tr>
<td>CS 194H</td>
<td>User Interface Design Project</td>
<td></td>
</tr>
<tr>
<td>CS 194W</td>
<td>Software Project</td>
<td></td>
</tr>
<tr>
<td>CS 210B</td>
<td>Software Project Experience with Corporate Partners</td>
<td></td>
</tr>
<tr>
<td>CS 294</td>
<td>Writing Intensive Research Project in Computer Science</td>
<td></td>
</tr>
</tbody>
</table>

Computer Science Depth B.S.

Choose one of the following ten CS degree tracks (a track must consist of at least 25 units and 7 classes):

**Artificial Intelligence Track**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 221</td>
<td>Artificial Intelligence: Principles and Techniques</td>
<td>4</td>
</tr>
</tbody>
</table>

Select two courses, each from a different area:

**Area I, AI Methods:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 228</td>
<td>Probabilistic Graphical Models: Principles and Techniques</td>
<td></td>
</tr>
<tr>
<td>CS 229</td>
<td>Machine Learning</td>
<td></td>
</tr>
<tr>
<td>CS 234</td>
<td>Reinforcement Learning</td>
<td></td>
</tr>
<tr>
<td>CS 238</td>
<td>Decision Making under Uncertainty</td>
<td></td>
</tr>
</tbody>
</table>

**Area II, Natural Language Processing:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 124</td>
<td>From Languages to Information</td>
<td></td>
</tr>
<tr>
<td>CS 224N</td>
<td>Natural Language Processing with Deep Learning</td>
<td></td>
</tr>
<tr>
<td>CS 224S</td>
<td>Spoken Language Processing</td>
<td></td>
</tr>
<tr>
<td>CS 224U</td>
<td>Natural Language Understanding</td>
<td></td>
</tr>
</tbody>
</table>

**Area III, Vision:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 131</td>
<td>Computer Vision: Foundations and Applications</td>
<td></td>
</tr>
<tr>
<td>CS 231A</td>
<td>Computer Vision: From 3D Reconstruction to Recognition</td>
<td></td>
</tr>
<tr>
<td>CS 231N</td>
<td>Convolutional Neural Networks for Visual Recognition</td>
<td></td>
</tr>
</tbody>
</table>

**Area IV, Robotics:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 223A</td>
<td>Introduction to Robotics</td>
<td></td>
</tr>
</tbody>
</table>

Select one additional course from the Areas above or from the following:

**AI Methods:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 157</td>
<td>Logic and Automated Reasoning</td>
<td></td>
</tr>
<tr>
<td>STATS 315A</td>
<td>Modern Applied Statistics: Learning</td>
<td></td>
</tr>
</tbody>
</table>
Biocomputation Track—

The Mathematics, Science, and Engineering Fundamentals requirements are non-standard for this track. See Handbook for Undergraduate Engineering Programs for details.

Select one of the following: 3-4

- CS 221 Artificial Intelligence: Principles and Techniques
- CS 228 Probabilistic Graphical Models: Principles and Techniques
- CS 229 Machine Learning
- CS 231A Computer Vision: From 3D Reconstruction to Recognition

Select one of the following: 3-4

- CS 262
- CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
- CS 273A The Human Genome Source Code
- CS 274 Representations and Algorithms for Computational Molecular Biology
- CS 275 Translational Bioinformatics
- CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells

One additional course from the lists above or the following: 3-4

- CS 124 From Languages to Information
- CS 145 Introduction to Databases
- CS 147 Introduction to Human-Computer Interaction Design
- CS 148 Introduction to Computer Graphics and Imaging
- CS 248 Interactive Computer Graphics

One course selected from the following: 3-4

- CS 108 Object-Oriented Systems Design
- CS 124 From Languages to Information
- CS 131 Computer Vision: Foundations and Applications
- CS 140 Operating Systems and Systems Programming
- or CS 140E Operating systems design and implementation
- CS 142 Web Applications
- CS 143 Compilers
- CS 144 Introduction to Computer Networking
- CS 145 Introduction to Databases
- CS 147 Introduction to Human-Computer Interaction Design
- CS 148 Introduction to Computer Graphics and Imaging
- CS 149 Parallel Computing
- CS 154 Introduction to Automata and Complexity Theory
- CS 155 Computer and Network Security
- CS 157 Logic and Automated Reasoning
- or PHIL 151 Metalevel
- CS 164
- CS 166 Data Structures
- CS 167
- CS 168 The Modern Algorithmic Toolbox
- CS 190 Software Design Studio
- CS 205B Mathematical Methods for Fluids, Solids, and Interfaces
- CS 210A Software Project Experience with Corporate Partners

Track Electives: at least three additional courses selected from the Areas and lists above, general CS electives, or the following: 4

- CS 238 Decision Making under Uncertainty
- CS 275 Translational Bioinformatics
- CS 326 Topics in Advanced Robotic Manipulation
- CS 334A Convex Optimization I
- or EE 364A Convex Optimization I
- CS 428 Computation and cognition: the probabilistic approach
- EE 278 Introduction to Statistical Signal Processing
- EE 364B Convex Optimization II
- ECON 286 Game Theory and Economic Applications
- MS&E 252 Decision Analysis I: Foundations of Decision Analysis
- MS&E 352 Decision Analysis II: Professional Decision Analysis
- MS&E 355 Influence Diagrams and Probabilistic Networks
- PHIL 152 Computability and Logic
- PSYCH 202 Cognitive Neuroscience
- PSYCH 204A Human Neuroimaging Methods
- PSYCH 204B Computational Neuroimaging: Methods & Analyses
- PSYCH 209 Neural Network Models of Cognition: Principles and Applications
- STATS 200 Introduction to Statistical Inference
- STATS 202 Data Mining and Analysis
- STATS 205 Introduction to Nonparametric Statistics

- CS 221
- CS 228
- CS 229
- CS 231A

**Computer Science**
Undergraduate Engineering Programs for further information.

which must be CS courses numbered 100 or above. See Handbook for

include a minimum of 25 units and seven courses, at least four of

Students may propose an individually designed track. Proposals should

Individually Designed Track—

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu)

1 MATH 19, MATH 20, and MATH 21 OR MATH 41 and MATH 42 OR

AP Calculus Credit may be used as long as at least 26 MATH units are taken. AP Calculus Credit must be approved by the School of Engineering.

2 The math electives list consists of: MATH 51, MATH 104, MATH 108, MATH 109, MATH 110, MATH 113; CS 157, CS 205A; PHIL 151; CME 100, CME 102, CME 103 (or EE103), CME 104. Completion of MATH 52 and MATH 53 will together count as one math elective. Restrictions: CS 157 and PHIL 151 may not be used in combination to satisfy the math electives requirement. Students who have taken both MATH 51 and MATH 52 may not count CME 100 as an elective. Courses counted as math electives cannot also count as CS electives, and vice versa.

3 The science elective may be any course of 3 or more units from the School of Engineering Science list (Fig. 4-2 in the UGHB), PSYCH 30, or AP Chemistry Credit. Either of the PHYSICS sequences 61/63 or 21/23 may be substituted for 41/43 as long as at least 11 science units are taken. AP Chemistry Credit and AP Physics Credit must be approved by the School of Engineering.

5 CS 205A Mathematical Methods for Robotics, Vision, and Graphics is strongly recommended in this list for the Graphics track. Students taking CME 104 Linear Algebra and Partial Differential Equations for Engineers are also required to take its prerequisite, CME 102 Ordinary Differential Equations for Engineers.

6 Independent study projects (CS 191 Senior Project or CS 191W Writing Intensive Senior Project) require faculty sponsorship and must be approved by the adviser, faculty sponsor, and the CS senior project adviser (P. Young). A signed approval form, along with a brief description of the proposed project, should be filed the quarter before work on the project is begun. Further details can be found in the Handbook for Undergraduate Engineering Programs.

**Honors Program**

The Department of Computer Science (CS) offers an honors program for undergraduates whose academic records and personal initiative indicate that they have the necessary skills to undertake high-quality research in computer science. Admission to the program is by application only. To apply for the honors program, students must be majoring in Computer Science, have a grade point average (GPA) of at least 3.6 in courses that count toward the major, and achieve senior standing (135 or more units) by the end of the academic year in which they apply. Coterminal master’s students are eligible to apply as long as they have not already received their undergraduate degree. Beyond these requirements, students who apply for the honors program must find a Computer Science faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford’s Academic Council.

Students who meet the eligibility requirements and wish to be considered for the honors program must submit a written application to the CS undergraduate program office by May 1 of the year preceding the honors work. The application must include a letter describing the research work. The application must include a letter describing the research project. Further details can be found in the Handbook for Undergraduate Engineering Programs.
In summary:

1. Complete at least 9 units of CS 191 or CS 191W under the direction of their project sponsor.
2. Attend a weekly honors seminar Winter and Spring quarters.
3. Complete an honors thesis deemed acceptable by the thesis adviser and at least one additional faculty member.
4. Present the thesis at a public colloquium sponsored by the department.
5. Maintain the 3.6 GPA required for admission to the honors program.

Guide to Choosing Introductory Courses

Students arriving at Stanford have widely differing backgrounds and goals, but most find that the ability to use computers effectively is beneficial to their education. The department offers many introductory courses to meet the needs of these students.

For students whose principal interest is an exposure to the fundamental ideas behind computer science and programming, CS 101 or CS 105 are the most appropriate courses. They are intended for students in nontechnical disciplines who expect to make some use of computers, but who do not expect to go on to more advanced courses. CS 101 and CS 105 meet the new Ways of Thinking Ways of Doing breadth requirements in Formal Reasoning and include an introduction to programming and the use of modern Internet-based technologies. Students interested in learning to use the computer should consider CS 1C, Introduction to Computing at Stanford.

Students who intend to pursue a serious course of study in computer science may enter the program at a variety of levels, depending on their background. Students with little prior experience or those who wish to take more time to study the fundamentals of programming should take CS 106A followed by CS 106B. Students in CS 106A need not have prior programming experience. Students with significant prior exposure to programming or those who want an intensive introduction to the field should take CS 106X or may start directly in CS 106B. CS 106A uses Java, JavaScript, or Python as its programming language; CS 106B and X use C++. No prior knowledge of these languages is assumed, and the prior programming experience required for CS 106B or X may be in any language. In all cases, students are encouraged to discuss their background with the instructors responsible for these courses.

After the introductory sequence, Computer Science majors and those who need a significant background in computer science for related majors in engineering should take CS 103, CS 107 and CS 110. CS 103 offers an introduction to the mathematical and theoretical foundations of computer science. CS 107 exposes students to a variety of programming concepts that illustrate critical strategies used in systems development; CS 110 builds on this material, focusing on the development of large-scale software making use of systems and networking abstractions.

Overseas Studies Courses in Computer Science

For course descriptions and additional offerings, see the listings in the Stanford Bulletin’s ExploreCourses web site (http://explorecourses.stanford.edu) or the Bing Overseas Studies web site (http://bosp.stanford.edu). Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.

Joint Major Program: Computer Science and a Humanities Major

The joint major program (JMP), authorized by the Academic Senate for a pilot period of six years beginning in 2014-15, permits students to major in both Computer Science and one of ten Humanities majors. See the “Joint Major Program (p. 31)” section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Because the JMP is new and experimental, changes to procedures may occur; students are advised to check the relevant section of the bulletin periodically.

Mission

The Joint Major provides a unique opportunity to gain mastery in two disciplines: Computer Science and a selected humanities field. Unlike the double major or dual major, the Joint Major emphasizes integration of the two fields through a cohesive, transdisciplinary course of study and integrated capstone experience. The Joint Major not only blends the intellectual traditions of two Stanford departments—it does so in a way that reduces the total unit requirement for each major.

Computer Science Major Requirements in the Joint Major Program

(See the respective humanities department Joint Major Program section of this bulletin for details on humanities major requirements.)

The CS requirements for the Joint Major follow the CS requirements for the CS-BS degree with the following exceptions:

1. Two of the depth electives are waived. The waived depth electives are listed below for each CS track.
2. The Senior Project is fulfilled with a joint capstone project. The student enrolls in CS191 or 191W (3 units) during the senior year. Depending on the X department, enrollment in an additional Humanities capstone course may also be required. But, at a minimum, 3 units of CS191 or 191W must be completed.
3. There is no double-counting of units between majors. If a course is required for both the CS and Humanities majors, the student will work
with one of the departments to identify an additional course - one which will benefit the academic plan - to apply to that major's total units requirement.

4. For CS, WiM can be satisfied with CS181W or CS191W.

**Depth Electives for CS Tracks for students completing a Joint Major:**

**Artificial Intelligence Track:**
One Track Elective (rather than three).

**Biocomputation Track:**
One course from Note 3 of the Department Program Sheet, plus one course from Note 4 of the Program Sheet.

**Computer Engineering Track:**
- EE 108A and 108B
- One of the following: EE 101A, 101B, 102A, 102B
- Satisfy the requirements of one of the following concentrations:
  1. Digital Systems Concentration: CS 140 or 143; EE 109, 271; plus one of CS 140 or 143 (if not counted above), 144, 149, 240E, 244; EE 273, 282
  2. Robotics and Mechatronics Concentration: CS 205A, 223A; ME 210; ENGR 105
  3. Networking Concentration: CS 140, 144; plus two of the following, CS 240, 240E, 244, 244B, 244E, 249A, 249B, EE 179, EE 276

**Graphics Track:**
No Track Electives required (rather than two)

**HCI Track:**
No Interdisciplinary HCI Electives required

**Information Track:**
One Track Elective (rather than three)

**Systems Track:**
One Track Elective (rather than three)

**Theory Track:**
One Track Elective (rather than three)

**Unspecialized Track:**
No Track Electives required (rather than two)

**Individually Designed Track:**
Proposals should include a minimum of five (rather than seven) courses, at least four of which must be CS courses numbered 100 or above.

**Declaring a Joint Major Program**

To declare the joint major, students must first declare each major through Axess, and then submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (https://stanford.box.com/change-UG-program) The Major-Minor and Multiple Major Course Approval Form (https://stanford.box.com/MajMin-MultMaj) is required for graduation for students with a joint major.

**Dropping a Joint Major Program**

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program. (https://stanford.box.com/change-UG-program). Students may also consult the Student Services Center (http://studentservicescenter.stanford.edu) with questions concerning dropping the joint major.

**Transcript and Diploma**

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major". The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major".

**Computer Science (CS) Minor**

The following core courses fulfill the minor requirements. Prerequisites include the standard mathematics sequence through MATH 51 (or CME 100).

**Units**

</tbody>
</table>

**Note**: for students with no programming background and who begin with CS 106A, the minor consists of seven courses.

**Master of Science in Computer Science**

In general, the M.S. degree in Computer Science is intended as a terminal professional degree and does not lead to the Ph.D. degree. Most students planning to obtain the Ph.D. degree should apply directly for admission to the Ph.D. program. Some students, however, may wish to complete the master's program before deciding whether to pursue the Ph.D. To give such students a greater opportunity to become familiar with research, the department has a program leading to a master's degree with distinction in research. This program is described in more detail below.

**Admission**

Applications to the M.S. program and all supporting documents must be submitted and received online by the published deadline. Information on
admission requirements (http://cs.stanford.edu/admissions) is available on the department’s web site; see also the department’s deadlines page (https://cs.stanford.edu/admissions/deadlines). Exceptions are made for applicants who are already students at Stanford and are applying to the coterminal program (https://cs.stanford.edu/admissions/current-stanford-students/coterminal-program).

University Coterminal Requirements
Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate program. The timing of the first quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Requirements
A candidate is required to complete a program of 45 units. At least 36 of these must be graded units, passed with a grade point average (GPA) of 3.0 (B) or better. The 45 units may include no more than 10 units of courses from those listed below in Requirement 1. Thus, students needing to take more than two of the courses listed in Requirement 1 actually complete more than 45 units of course work in the program. Only well-prepared students may expect to finish the program in one year; most students complete the program in six quarters. Students hoping to complete the program with 45 units should already have a substantial background in computer science, including course work or experience equivalent to all of Requirement 1 and some prior course work related to their specialization area.

Requirement 1: Foundations—
Students must complete the following courses, or waive out of them by providing evidence to their advisers that similar or more advanced courses have been taken, either at Stanford or another institution (total units used to satisfy foundations requirement may not exceed 10):

- Logic, Automata, and Computability
  - Logic
  - Automata
  - Computation Theory

- Probability
  - CS 103 Mathematical Foundations of Computing

Select one of the following:

- CS 109 Introduction to Probability for Computer Scientists
- STATS 116 Theory of Probability
- MS&E 220 Probabilistic Analysis
- CME 106 Introduction to Probability and Statistics for Engineers

Algorithmic Analysis
- CS 161 Design and Analysis of Algorithms

Computer Organization and Systems
- CS 107 Computer Organization and Systems
- or CS 107E Computer Systems from the Ground Up

Principles of Computer Systems
- CS 110 Principles of Computer Systems

Requirement 2: Significant Software Implementation—
Students must complete at least one course designated as having a significant software implementation component. The list of such courses includes:

- CS 140 Operating Systems and Systems Programming
- or CS 140E Operating systems design and implementation
- CS 143 Compilers
- CS 144 Introduction to Computer Networking
- CS 145 Introduction to Databases
- CS 148 Introduction to Computer Graphics and Imaging
- CS 190 Software Design Studio
- CS 210B Software Project Experience with Corporate Partners
- CS 221 Artificial Intelligence: Principles and Techniques
- CS 227B General Game Playing
- CS 243 Program Analysis and Optimizations
- CS 248 Interactive Computer Graphics
- CS 341 Project in Mining Massive Data Sets
- CS 346 (Offered occasionally) 3-5

Requirement 3: Specialization—
Students may choose to satisfy this requirement through one of two options, Single Depth or Dual Depth, outlined following. All courses taken for this requirement must be taken on a letter grade basis for three or more units.

Option 1—Single Depth
- A program of 27 units in a single area of specialization must be completed. A maximum of 9 units of independent study (CS 393, CS 395, CS 399) may be counted toward the specialization.
- Additionally, students must complete three breadth courses from the list of approved breadth courses associated with their chosen specialization. Individual specializations explicitly have different breadth requirements; see the individual specialization sheets on the department’s web site (http://cs.stanford.edu/degrees/mscs/programsheets) for details.
- Breadth courses may not be waived, must be taken for at least 3 units each, and must be completed for a letter grade.

Option 2—Dual Depth
- Students select distinct primary and secondary areas.
- A program of 21 units in the primary area of specialization must be completed. A maximum of 9 units of independent study (CS 393, CS 395, CS 399) may be counted toward the primary specialization.
- Students must also complete a program of five courses satisfying the requirements for their secondary area of specialization.
- Breadth courses are not required.

Specialization Areas—
Ten approved specialization areas which may be used to satisfy Requirement 3 are listed following. Students may propose to the M.S. program committee other coherent programs that meet their goals and satisfy the basic requirements.

Courses marked with an asterisk (*) require consent of the faculty adviser. Courses marked with a double asterisk (**) may be waived by
1. Artificial Intelligence—

A.

<table>

### Computer and Network Security Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

**3. Computer and Network Security Breadth Courses**

- **CS 124** From Languages to Information (3-4)
- **CS 143** Compilers (3-4)
- **CS 147** Introduction to Human-Computer Interaction (3-4)
- **CS 148** Introduction to Computer Graphics and Imaging (3-4)
- **CS 149** Parallel Computing (3-4)
- **CS 154** Introduction to Automata and Complexity Theory (3-4)
- **CS 157** Logic and Automated Reasoning (3-4)
- **CS 166** Data Structures (3-4)
- **CS 168** The Modern Algorithmic Toolbox (3-4)
- **CS 205A** Mathematical Methods for Robotics, Vision, and Graphics (3-4)
- **CS 221** Artificial Intelligence: Principles and Techniques (3-4)
- **CS 223A** Introduction to Robotics (3-4)
- **CS 224N** Natural Language Processing with Deep Learning (3-4)
- **CS 224S** Spoken Language Processing (2-4)
- **CS 224U** Natural Language Understanding (3-4)
- **CS 224W** Analysis of Networks (3-4)
- **CS 227B** General Game Playing (3-4)
- **CS 228** Probabilistic Graphical Models: Principles and Techniques (3-4)
- **CS 229** Machine Learning (3-4)
- **CS 231A** Computer Vision: From 3D Reconstruction to Recognition (3-4)
- or **CS 231B**
- **CS 233** Geometric and Topological Data Analysis (3-4)
- **CS 234** Reinforcement Learning (3-4)
- **CS 242** Programming Languages (3-4)
- **CS 243** Program Analysis and Optimizations (3-4)
- **CS 246** Mining Massive Data Sets (3-4)
- **CS 249A**
- **CS 262**
- **CS 267** Graph Algorithms (3-4)
- **CS 268** Geometric Algorithms (3-4)
- **CS 269I** Incentives in Computer Science (3-4)
- **CS 270** Modeling Biomedical Systems: Ontology, Terminology, Problem Solving (3-4)
- **CS 273A** The Human Genome Source Code (3-4)
- **CS 274** Representations and Algorithms for Computational Molecular Biology (3-4)
- **CS 276** Information Retrieval and Web Search (3-4)
- **CS 279** Computational Biology: Structure and Organization of Biomolecules and Cells (3-4)
- **CME 108** Introduction to Scientific Computing (3-4)
4. Human-Computer Interaction—

A.

<table>

PSYCH 204 Computation and cognition: the probabilistic approach

PSYCH 209 Neural Network Models of Cognition: Principles and Applications

j. Sym Sys

SYMSYS 245 Cognition in Interaction Design

Additional courses

1 Any d.school course (http://dschool.stanford.edu) or any HCI course (http://hci.stanford.edu/courses); such courses must be numbered 100 or above and be taken for at least 3 units to count for this requirement

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (A) through (C) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Human-Computer Interaction must take five courses satisfying the areas (A) through (C).

Human-Computer Interaction Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

<table>
<thead>
<tr>
<th>Course</th>

8. Software Theory—
A.
CS 243  Program Analysis and Optimizations  
B. Select at least one of the following:
CS 244  Advanced Topics in Networking
CS 245  Database Systems Principles
CS 341  Project in Mining Massive Data Sets
CS 343  (Offered occasionally)
CS 345  (Offered occasionally)
C. Select at least two courses from the following:
CS 242  Programming Languages
CS 255  Introduction to Cryptography
CS 261  Optimization and Algorithmic Paradigms
CS 263  Algorithms for Modern Data Models
CS 264  Beyond Worst-Case Analysis
CS 265  Randomized Algorithms and Probabilistic Analysis
CS 266  
CS 267  Graph Algorithms
CS 268  Geometric Algorithms
CS 355  Advanced Topics in Cryptography (Not given this year)
CS 367  (Not given this year)
D. A total of at least 27 units from (A), (B), (C), or the following:
CS 250  Algebraic Error Correcting Codes
CS 251  Bitcoin and Crypto Currencies
CS 294S  Research Project in Software Systems and Security (Not given this year) *
CS 346  
CS 362  (Not given this year)
CS 393  Computer Laboratory *
CS 395  Independent Database Project *
CS 399  Independent Project *

- Students with a 27- or 21-unit depth option (Option 1 or 2 above) must take 27 or 21 units respectively subject to satisfying the area (A) through (D) requirements above.
- Students with a secondary area of specialization (per Option 2 above) in Software Theory need to take 5 total courses satisfying the area (A) through (D) requirements above.

Software Theory Breadth Courses
Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each.

CS 124  From Languages to Information  3-4
CS 140  Operating Systems and Systems Programming  3-4

or CS 140E  Operating systems design and implementation  3-5
CS 147  Introduction to Human-Computer Interaction Design  3-5
CS 148  Introduction to Computer Graphics and Imaging  3-4
CS 149  Parallel Computing  3-4
CS 154  Introduction to Automata and Complexity Theory  3-4
CS 155  Computer and Network Security  3
CS 157  Logic and Automated Reasoning  3
CS 221  Artificial Intelligence: Principles and Techniques  3-4
CS 223A  Introduction to Robotics  3
CS 224N  Natural Language Processing with Deep Learning  3-4
CS 224S  Spoken Language Processing  2-4
CS 224U  Natural Language Understanding  3-4
CS 224W  Analysis of Networks  3
CS 227B  General Game Playing  3
CS 228  Probabilistic Graphical Models: Principles and Techniques  3-4
CS 229  Machine Learning  3-4
CS 231A  Computer Vision: From 3D Reconstruction to Recognition  3

or CS 231B
CS 233  Geometric and Topological Data Analysis  3
CS 234  Reinforcement Learning  3
CS 240  Advanced Topics in Operating Systems  3
CS 240E  (no longer offered)
CS 240H  3-4
CS 244B  Distributed Systems  3
CS 244E  
CS 246  Mining Massive Data Sets  3-4
CS 249A  3
CS 262  3

CME 108  Introduction to Scientific Computing  3-4
CME 302  Numerical Linear Algebra  3
EE 180  Digital Systems Architecture  3-4
EE 282  Computer Systems Architecture  3

9. Systems—
A.
CS 140  Operating Systems and Systems Programming **
or CS 140E  Operating systems design and implementation **
CS 144  Introduction to Computer Networking **
CS 240  Advanced Topics in Operating Systems
B. Select at least four of the following:
CS 190  Software Design Studio
CS 242  Programming Languages
CS 243  Program Analysis and Optimizations
CS 244  Advanced Topics in Optimizations
C. A total of at least 27 units from categories (A), (B), and the following:

- CS 240E (no longer offered)
- CS 240H
- CS 241 Embedded Systems Workshop
- CS 244B Distributed Systems
- CS 244E
- CS 246 Mining Massive Data Sets
- CS 249A
- CS 251 Bitcoin and Crypto Currencies
- CS 255 Introduction to Cryptography
- CS 262
- CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
- CS 272 Introduction to Biomedical Informatics Research Methodology
- CS 276 Information Retrieval and Web Search
- CS 294S Research Project in Software Systems and Security (Not given this year)
- CS 315B Parallel Computing Research Project
- CS 316 Advanced Multi-Core Systems
- CS 340
- CS 341 Project in Mining Massive Data Sets
- CS 343 (Not given this year)
- CS 344 Topics in Computer Networks (CS 344 with any suffix)
- CS 345 (Offered occasionally)
- CS 346
- CS 347
- CS 348C Computer Graphics: Animation and Simulation
- CS 349 Topics in Programming Systems (CS 349 with any suffix)
- CS 374
- CS 393 Computer Laboratory *
- CS 395 Independent Database Project *
- CS 399 Independent Project *
- CS 448 Topics in Computer Graphics (CS 448 with any suffix)
- EE 267 Virtual Reality
- EE 273 Digital Systems Engineering
- EE 382C Interconnection Networks
- EE 384A Internet Routing Protocols and Standards
- EE 384B Multimedia Communication over the Internet (not given this year)
- EE 384C Wireless Local and Wide Area Networks
- EE 384S Performance Engineering of Computer Systems & Networks

• Students with a 27-unit depth option (Option 2 above) must take that many units subject to satisfying the area (A) and (B) requirements above, and additional courses may be taken from area (C) if any courses in the area (A) requirement are waived.

• Students with a secondary area of specialization (per Option 2 above) in Systems need to take five courses; those courses must satisfy the area (A) requirement and additional courses may be taken from area (B).

Systems Breadth Courses

Students in the single depth specialization must complete three of the following breadth courses and receive a letter grade for each:

- CS 124 From Languages to Information 3-4
- CS 147 Introduction to Human-Computer Interaction Design 3-5
- CS 154 Introduction to Automata and Complexity Theory 3-4
- CS 155 Computer and Network Security 3
- CS 157 Logic and Automated Reasoning 3
- CS 166 Data Structures 3-4
- CS 168 The Modern Algorithmic Toolbox 3-4
- CS 221 Artificial Intelligence: Principles and Techniques 3-4
- CS 223A Introduction to Robotics 3
- CS 224N Natural Language Processing with Deep Learning 3-4
- CS 224S Spoken Language Processing 2-4
- CS 224U Natural Language Understanding 3-4
- CS 224W Analysis of Networks 3
- CS 227B General Game Playing 3
- CS 228 Probabilistic Graphical Models: Principles and Techniques 3-4
- CS 229 Machine Learning 3-4
- CS 231A Computer Vision: From 3D Reconstruction to Recognition or CS 231B
- CS 233 Geometric and Topological Data Analysis 3
- CS 234 Reinforcement Learning 3
- CS 261 Optimization and Algorithmic Paradigms 3
- CS 264 Beyond Worst-Case Analysis 3
- CS 265 Randomized Algorithms and Probabilistic Analysis 3
- CS 266 3
- CS 267 Graph Algorithms 3
- CS 268 Geometric Algorithms 3
- CS 269I Incentives in Computer Science 3
- CS 273A The Human Genome Source Code 3
- CS 274 Representations and Algorithms for Computational Molecular Biology 3
- CS 279 Computational Biology: Structure and Organization of Biomolecules and Cells 3
- CME 108 Introduction to Scientific Computing 3-4
- CME 302 Numerical Linear Algebra 3

10. Theoretical Computer Science—

A. CS 154 Introduction to Automata and Complexity Theory **
- CS 261 Optimization and Algorithmic Paradigms

B. A total of at least 27 units from category (A) and the following:

- CS 166 Data Structures
- CS 168 The Modern Algorithmic Toolbox

* With consent of faculty adviser.
** Students with equivalent course work may waive with approval of their adviser.

### Requirement 4

Additional elective units must be technical courses (numbered 100 or above) related to the degree program and approved by the adviser and MS program administrator. All CS courses numbered above 110 (with the exception of CS 196 and 198) taken for 3 or more units are pre-approved as elective courses. Additionally, up to a maximum of 3 units of 500-level CS seminars, CS 300, EE 380, EE 385A, or other 1-2 unit seminars offered in the School of Engineering may be counted as electives. Elective
courses may be taken on a satisfactory/no credit basis provided that a minimum of 36 graded units is presented within the 45-unit program.

**Master of Science with Distinction in Research**

A student who wishes to pursue the M.S. in CS with distinction in research must first identify a faculty adviser who agrees to supervise and support the research work. The research adviser must be a member of the Academic Council and must hold an appointment in Computer Science. The student and principal adviser must also identify another faculty member, who need not be in the Department of Computer Science, to serve as a secondary adviser and reader for the research report. In addition, the student must complete the following requirements beyond those for the regular M.S. in CS degree:

1. **Research Experience**—The program must include significant research experience at the level of a half-time commitment over the course of three academic quarters. In any given quarter, the half-time research commitment may be satisfied by a 50 percent appointment to a departmentally supported research assistantship, 6 units of independent study (CS 393, CS 395, or CS 399), or a prorated combination of the two (such as a 25 percent research assistantship supplemented by 3 units of independent study). This research must be carried out under the direction of the primary or secondary adviser.

2. **Supervised Writing and Research**—In addition to the research experience outlined in the previous requirement, students must enroll in at least 3 units of independent research (CS 393, CS 395, or CS 399) under the direction of their primary or secondary adviser. These units should be closely related to the research described in the first requirement, but focused more directly on the preparation of the research report described in the next section. The writing and research units described in parts (1) and (2) may be counted toward the 45 units required for the degree.

3. All independent study units (CS 393, CS 395, CS 399) must be taken for letter grades and a GPA of 3.0 (B) or better must be maintained.

4. **Research Report**—Students must complete a significant report describing their research and its conclusions. The research report represents work that is publishable in a journal or at a high-quality conference, although it is presumably longer and more expansive in scope than a typical conference paper. A copy of the research report must be submitted to the student services office in the department three weeks before the beginning of the examination period in the student’s final quarter. Both the primary and secondary adviser must approve the research report before the distinction-in-research designation can be conferred.

**Master of Science in Computer Science Education**

Candidates for the MS specialization in Computer Science Education will be admitted from a separate pool of applicants and will be eligible only for this specialization. The qualifications for admission are:

- A doctorate in an academic discipline other than Computer Science
- Experience and evidence of excellence in college-level teaching
- Successful completion of a standard introductory programming sequence (CS 106B or equivalent)

Admitted candidates will complete the following courses (45 units) over the course of four quarters:

- CS 103, Mathematical Foundations of Computing
- CS 107, Computer Organization and Systems
- CS 108, Object-oriented Systems Design
- CS 109, Introduction to Probability Design
- CS 110, Principles of Computer Systems
- CS 161, Design and Analysis of Algorithms
- CS 198, Teaching Computer Science
- CS 208E, Great Ideas in Computer Science

Two CS elective courses and a final project

**Joint M.S. and MBA Degree**

The joint MS in Computer Science/MBA degree links two of Stanford University’s world-class programs. This joint degree offers students an opportunity to develop advanced technical and managerial skills for a broader perspective on both existing technologies and new technology ventures.

Admission to the joint MS/MBA program requires that students apply and be accepted independently to both the Computer Science Department in the School of Engineering and the Graduate School of Business. Students may apply concurrently, or elect to begin their course of study in CS and apply to the GSB during their first year.

Additional information on the MS in Computer Science/MBA Joint Degree Program and its requirements is available on the department’s web site (https://cs/stanford.edu/admissions/).

**Joint M.S. and Law Degree**

Law students interested in pursuing an M.S. in Computer Science must apply for admission to the Computer Science Department either (i) concurrently with applying to the Law School; or (ii) after being admitted to the Law School, but no later than the earlier of: (a) the end of the second year of Law School; or (b) the Computer Science Department’s admission deadline for the year following that second year of Law School.

In addition to being admitted separately to the Law School and the Computer Science Department, students must secure permission from both academic units to pursue degrees in those units as part of a joint degree program.

J.D./M.S. students may elect to begin their course of study in either the Law School or the Computer Science Department. Faculty advisors from each academic unit participate in the planning and supervising of the student’s joint program. Students must be enrolled full-time in the Law School for the first year of law studies. Otherwise, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. Students must
satisfy the requirements for both the J.D. degree as specified by the Law School and the M.S. degree as specified in this Bulletin.

The Law School approves courses from the Department of Computer Science that may count toward the J.D. degree, and the Computer Science Department approves courses from the Law School that may count toward the M.S. degree in Computer Science. In either case, approval may consist of a list applicable to all joint-degree students or may be tailored to each individual student program. No more than 45 units of approved courses may be counted toward both degrees. No more than 36 units of courses that originate outside the Law School may count toward the Law degree. To the extent that courses under this joint degree program originate outside of the Law School but count toward the Law degree, the Law School credits permitted under Section 17(1) of the Law School Regulations shall be reduced on a unit-per-unit basis, but not below zero. The maximum number of Law School credits that may be counted toward the M.S. in Computer Science is the greater of: (i) 12 units; or (ii) the maximum number of units from courses outside of the department that M.S. candidates in Computer Science are permitted to count toward the M.S. in the case of a particular student’s individual program. Tuition and financial aid arrangements are normally through the school in which the student is then enrolled.

**Teaching and Research Assistantships in Computer Science**

Graduate student assistantships are available. Half-time assistants receive a tuition scholarship for 8, 9, or 10 units per quarter during the academic year, and in addition receive a monthly stipend.

Duties for half-time assistants during the academic year involve approximately 20 hours of work per week. Course assistants (CAs) help an instructor teach a course by conducting discussion sections, consulting with students, and grading examinations. Research assistants (RAs) help faculty and senior staff members with research in computer science. Many MS students are hired to staff teaching and research assistantships. However, MS students should not plan on being appointed to an assistantship.

Students with fellowships may have the opportunity to supplement their stipends by serving as graduate student assistants.

**Doctor of Philosophy in Computer Science**

The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees (p. 50)” section of this bulletin. Department requirements are stated below.

**Requirements**

Applications to the Ph.D. program and all supporting documents must be submitted and received online by the published deadline. See the department’s web site for admissions requirements and the application deadline (https://cs.stanford.edu/admissions/general-information). Changes or updates to the admission process are posted in September.

The following are general department requirements. Contact the Computer Science Ph.D. administrator for details.

1. A student should plan and complete a coherent program of study covering the basic areas of computer science and related disciplines. The student’s adviser has primary responsibility for the adequacy of the program, which is subject to review by the Student Services Office.

2. The first year of the Ph.D. program is spent working with 1-3 different professors on a rotating basis. The intent is to allow the first-year Ph.D. student to work with a variety of professors before aligning with a permanent program adviser. Students who don’t need the full year to find a professor to align with will have the option of aligning within the first or second quarter.

3. The CS 300 Departmental Lecture Series seminar gives faculty the opportunity to explain their research to first year CS Ph.D. students. First year CS Ph.D. students are required to attend 2/3 of the classes to receive credit.

4. A student must complete 135 course units for graduation. Computer Science Ph.D. students take 8-10 units per quarter. Credit for coursework done elsewhere (up to the maximum of 45 course units) may be applied to graduation requirements. Students must also take at least three units of coursework from four different faculty members. There are NO courses specifically required by the CS Ph.D. program except for the 1 unit CS 300 Departmental Lecture Series and CS 499 Advanced Reading and Research or its equivalent. At least one course must be taken for a letter grade. A 3.0 GPA must be maintained.

5. Each student, to remain in the Ph.D. program, must satisfy the breadth requirement covering introductory-level graduate material in major areas of computer science. A student must fulfill two breadth-area requirements in each of three general areas by the end of the second year in the program. Students with breadth requirements completed before joining Stanford may have the opportunity to apply for membership in the program.

6. University policy requires that all doctoral students declare candidacy by the end of the sixth quarter in residence, excluding summers. However, after aligning with a permanent adviser, passing six breadth requirements, and taking classes with four different faculty, a student is eligible to file for candidacy prior to the second year in the program. An up-to-date list of courses that satisfy the breadth requirements (http://cs.stanford.edu/education/phd) can be found on the department’s web site. The student must completely satisfy the breadth requirement by the end of the second year in the program and must pass a qualifying exam in the general area of their expected dissertation by the end of the third year in the program.

7. Each student is required to pass a qualifying exam in their area by the end of their third year in the program. A student may only take the qualifying exam twice. If the student fails the qualifying exam a second time, the Ph.D. program committee is convened to discuss the student’s lack of reasonable academic progress. Failing the exam a second time is cause for dismissal from the Computer Science Ph.D. program and the committee meets to discuss the final outcome for the student.

8. As part of the training for the Ph.D., the student is also required to complete at least four units (a unit is ten hours per week for one quarter) as a course assistant or instructor for courses in Computer Science numbered 100 or above.

9. The Reading Committee form and Oral Thesis Proposal must be submitted within one year of passing the qualifying exam.

10. The Oral Thesis Proposal must be submitted before the end of the fourth year.

11. The most important requirement is the dissertation. After passing the required qualifying examination, each student must secure the approval of a member of the department faculty to act as the dissertation adviser. The dissertation adviser is often the student’s program adviser.
12. The student must pass a University oral examination in the form of a defense of the dissertation. This is typically held after all or a substantial portion of the dissertation research has been completed.

13. The student is expected to demonstrate the ability to present scholarly material orally in the dissertation defense.

14. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a second member from within the department, and a third member chosen from within or outside of the University. The department requires at least two committee members to be affiliated with the Computer Science department. The principal adviser and at least one of the other committee members must be Academic Council members.

**Guidelines for Reasonable Progress**

By the end of the first academic year, a student should be aligned with a permanent research advisor.

By Spring Quarter of the second year, a student should complete all six breadth area requirements, two breadth area requirements in each of three areas, and file for candidacy.

By Spring Quarter of the third year, a student should pass a Qualifying Examination (https://cs.stanford.edu/academics/phd/qualifying-exams) in the area of his or her intended dissertation.

Within one year of passing the Qualifying Examination, a student should submit a signed Reading Committee Form (https://stanford.app.box.com/v/docdiss-reading-committee-form). By Spring Quarter of the fourth year, a student should submit the Thesis Proposal Form (http://cs.stanford.edu/degrees/phd/PhDThesisProposalForm.pdf).

The teaching requirement may be satisfied at any time. The research requirement is routinely satisfied by participation in research throughout the student’s career.

**Ph.D. Minor in Computer Science**

For a minor in Computer Science, a candidate must complete 20 units of Computer Science coursework numbered 200 or above, except for the 100-level courses listed on the Ph.D. Minor Worksheet (http://cs.stanford.edu/degrees/phd/admissions/Worksheet.pdf) (pdf). At least three of the courses must be master’s core courses to provide breadth and one course numbered 300 or above to provide depth. One of the courses taken must include a significant programming project to demonstrate programming efficiency. Courses must be taken for a letter grade and passed with a grade of ‘B’ or better. Applications for a minor in Computer Science are submitted at the same time as admission to candidacy.

**Chair:** Alex Aiken (http://theory.stanford.edu/~aiken)

**Associate Chair for Education:** Mehran Sahami (http://robotics.stanford.edu/users/sahami/bio.html)

**Professors (Research):** Clark Barrett (http://www.cs.nyu.edu/~barrett), William J. Dally (http://cva.stanford.edu/bilb_webpage_new.html),

**Professor (Teaching):** Mehran Sahami (http://robotics.stanford.edu/users/sahami/bio.html)

**Courtesy Professors:** Russ Altman (http://bmir.stanford.edu/people/view.php?user=russ_b_altman), Stephen Boyd (http://www.stanford.edu/~boyd), Patrick Hayden, Michael Levitt, Roy Pea

**Courtesy Associate Professors:** Ashish Goel (http://www.stanford.edu/~ashishg), Allison Okamura, Chris Potts, Ge Wang (https://ccrma.stanford.edu/~ge).
Courtesy Assistant Professors: John Duchi, Sean Follmer, Sharad Goel, Thomas Icard, Ramesh Johari, Mykel Kochenderfer (http://mykel.kochenderfer.com), Stephen Montgomery (http://montgomerylab.stanford.edu), Camille Utterback, Gordon Wetzstein, Aaron Sidford, Dan Yamins, James Zou

Adjunct Professors: Pei Cao, Stuart Card, Tom Dean, Daphne Koller, P. Pandurang Nayak, Andrew Ng (http://www.andrewng.org), Bill MacCartney (http://nlp.stanford.edu/~wcmac), Sebastian Thrun (http://robots.stanford.edu)

Visiting Professors: Thomas Funkhouser

Visiting Assistant Professors:

Secondary Appointment in CS: Anshul Kundaje

* Recalled to active duty.
ELECTRICAL ENGINEERING

The Department of Electrical Engineering (EE) at Stanford innovates by conducting fundamental and applied research to develop physical technologies, hardware and software systems, and information technologies; it educates future academic and industry leaders; and it prepares students for careers in industry, academia, and research labs.

Electrical Engineering has effected societal changes at the heart of the information revolution. All forms of electrical and electronic devices—both hardware and software—are a part of daily lives, whether these are in the home, personal devices, or the infrastructure of communications, information, and computation. Electrical engineers use theories and tools from mathematics and physics to develop systems ranging from smart electric grids, wired and wireless communications and networking, embedded systems, integrated electronics, imaging and sensing devices, to Internet-based information technology.

The Electrical Engineering Department offers the following degrees: Bachelor of Science, Master of Science, and Doctor of Philosophy. The department also offers joint degrees in Electrical Engineering and Law (M.S./J.D.) and Electrical Engineering and Business Administration (M.S./M.B.A.). A minor can be obtained for the Bachelor of Science and Doctor of Philosophy.

Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart basic understanding of electrical engineering, and to develop skills in the design and building of systems that directly impact societal needs.

The program includes a balanced foundation in the physical sciences, mathematics and computing; core courses in electronics, information systems and digital systems; and develops specific skills in the analysis and design of systems. Students in the major have broad flexibility to select from disciplinary areas beyond the core, including hardware and software, information systems and science, and physical technology and science, as well as electives in multidisciplinary areas, including bio-electronics and bio-imaging, energy and environment and music.

The program prepares students for a broad range of careers—both industrial and government—as well as for professional and academic graduate education.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department’s undergraduate program. The educational objectives of the program are:

1. Technical knowledge—provide a knowledge of electrical engineering principles along with the required supporting knowledge of computing, engineering fundamentals, mathematics, and science. The program must include depth in at least one disciplinary area, currently including hardware and software, information systems and science, and physical technology and science.

2. Laboratory and design skills—develop the basic skills needed to perform and design experimental projects. Develop the ability to formulate problems and projects and to plan a process for solution, taking advantage of diverse technical knowledge and skills.

3. Communications skills—develop the ability to organize and present information and to write and speak effective English.

4. Preparation for further study—provide sufficient breadth and depth for successful subsequent graduate study, postgraduate study, or lifelong learning programs.

5. Preparation for the profession—provide an appreciation for the broad spectrum of issues arising in professional practice, including economics, ethics, leadership, professional organizations, safety, service, and teamwork.

Graduate Programs in Electrical Engineering

University regulations governing the M.S. and Ph.D. degrees are described in the “Graduate Degrees” section of this bulletin.

The profession of electrical engineering demands a strong foundation in physical science and mathematics, a broad knowledge of engineering techniques, and an understanding of the relationship between technology and society. Curricula at Stanford are planned to offer the breadth of education and depth of training necessary for leadership in the profession. To engage in this profession with competence, four years of undergraduate study and at least one year of postgraduate study are recommended. For those who plan to work in highly technical development or fundamental research, additional graduate study is desirable.

The degree of Master of Science is offered under the general regulations of the University. The master’s program, requiring a minimum of 45 units of graduate study, should be considered by those with the ability and desire to make a life work of professional practice or continued graduate study.

The degree of Doctor of Philosophy is offered under the general regulations of the University. The doctoral program, requiring a minimum of 135 units of graduate study, should be considered by those with the ability and desire to make a life work of research or teaching.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work providing specialization in one area of Electrical Engineering and breadth in several other areas. Areas of specialization include Circuits, Software and Hardware Systems, Communications and Networking, Physical Technology and Science, and Signal Processing, Control and Optimization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Electrical Engineering and related fields.

Application for Admission

Applications for graduate admission in Electrical Engineering (EE) should be completed electronically at the Graduate Admissions (http://gradadmissions.stanford.edu) web site. See the Electrical Engineering graduate admissions (http://ee.stanford.edu/admissions) web site for department specific information.
Disciplinary Areas in Electrical Engineering

Electrical Engineering spans a diverse set of intellectual disciplines and applications. The disciplines can be grouped into three overlapping and interrelated areas:

**Hardware/Software Systems**
- Data Science
- Embedded Systems
- Energy-Efficient Hardware Systems
- Integrated Circuits and Power Electronics
- Secure Distributed Systems
- Software Defined Networking
- Mobile Networking

**Information Systems and Science**
- Biomedical Imaging
- Communications Systems
- Control, Optimization, and Machine Learning
- Data Science
- Information Theory and Applications
- Societal Networks
- Signal Processing and Multimedia

**Physical Technology and Science**
- Biomedical Devices, Sensors and Systems
- Electronic Devices
- Energy Harvesting and Conversion
- Integrated Circuits and Power Electronics
- Nanotechnology, Nanofabrication and NEMS/MEMS
- Photonics, Nanoscience and Quantum Technology

**Multidisciplinary Research**
EE faculty collaborate with researchers from other departments and schools across campus. While the main applications of electrical engineering in the past four decades have been in information technology, EE tools and techniques are being increasingly applied more broadly to address major societal problems in areas such as:

**Biomedical**
Research in the biomedical area utilizes engineering approaches to meet the unmet needs in diagnosis, staging, treatment, and mitigation of illnesses including cancer, diabetes, heart diseases, as well as brain disorders. These challenges are addressed by discovering and creating fundamentally new devices and systems for critical diagnostics (sensors, imaging), therapeutic (lasers, pacemakers, and neural interfaces), and analytical (high-throughput sequencing, healthcare IT) technologies.

**Energy**
Research in energy is motivated at the macro level by the rapid rise in worldwide demand for electricity and the threat of global climate change and on the micro level by the explosion in the number of mobile devices and sensors whose performance and lifetimes are limited by energy.

For additional information, see the Department of Electrical Engineering’s Research (https://ee.stanford.edu/research/the-big-picture) web site.

---

Electrical Engineering Course Catalog Numbering System

Electrical Engineering courses are typically numbered according to the year in which the courses are normally taken.

<table>
<thead>
<tr>
<th>Number</th>
<th>Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>010-099</td>
<td>first or second year undergraduate</td>
</tr>
<tr>
<td>100-199</td>
<td>second through fourth year undergraduate</td>
</tr>
<tr>
<td>200-299</td>
<td>mezzanine courses for advanced undergraduate or first-year graduate</td>
</tr>
<tr>
<td>300-399</td>
<td>second through fourth year graduate</td>
</tr>
<tr>
<td>400-499</td>
<td>specialized courses for advanced graduate</td>
</tr>
<tr>
<td>600-799</td>
<td>special summer courses</td>
</tr>
</tbody>
</table>

Undergraduate Programs in Electrical Engineering

To major in Electrical Engineering (EE), undergraduates should follow the requirements below. Students must have a program planning sheet approved by their adviser and the department before the end of the quarter following the quarter in which they declare the EE major. A final version of the completed and signed program sheet is due to the department no later than one month prior to the last quarter of senior year. Program sheets are available at http://ughb.stanford.edu. Students must receive at least a 2.0 grade point average (GPA) in courses taken for the EE major; all classes must be taken for a letter grade.

Students interested in a minor should consult the "Minor in Electrical Engineering (p. 299)” tab of this section of this bulletin.

A Stanford undergraduate may work simultaneously toward the B.S. and M.S. degrees. See the Master’s tab (p. 300) of this section of the bulletin.

Electrical Engineering (EE)

Completion of the undergraduate program in Electrical Engineering leads to the conferral of the Bachelor of Science in Electrical Engineering.

Mission of the Undergraduate Program in Electrical Engineering

The mission of the undergraduate program of the Department of Electrical Engineering is to augment the liberal education expected of all Stanford undergraduates, to impart basic understanding of electrical engineering and to develop skills in the design and building of systems that directly impact societal needs.

The program includes a balanced foundation in the physical sciences, mathematics and computing; core courses in electronics, information systems and digital systems; and develops specific skills in the analysis and design of systems. Students in the major have broad flexibility to select from disciplinary areas beyond the core, including hardware and software, information systems and science, and physical technology and science, as well as electives in multidisciplinary areas, including bioelectronics and bio-imaging, energy and environment and music.

The program prepares students for a broad range of careers—both industrial and government—as well as for professional and academic graduate education.
## Requirements

### Mathematics ^1

Select one sequence: May also be satisfied with AP Calculus.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 19</td>
<td>10</td>
</tr>
<tr>
<td>&amp; MATH 20</td>
<td></td>
</tr>
<tr>
<td>&amp; MATH 21</td>
<td></td>
</tr>
</tbody>
</table>

Select one 2-course sequence:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CME 100 Vector Calculus for Engineers &amp; CME 102</td>
<td>10</td>
</tr>
<tr>
<td>Linear Algebra and Ordinary Differential Equations</td>
<td></td>
</tr>
<tr>
<td>for Engineers (Same as ENGR 154 and ENGR 155A)</td>
<td></td>
</tr>
<tr>
<td>MATH 51 &amp; MATH 53 Linear Algebra and Differential Calculus</td>
<td></td>
</tr>
<tr>
<td>of Several Variables and Ordinary Differential Equations</td>
<td></td>
</tr>
<tr>
<td>with Linear Algebra ^2</td>
<td></td>
</tr>
</tbody>
</table>

**EE Math. One additional 100-level course. Select one:**

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EE 103</td>
<td>3</td>
</tr>
<tr>
<td>MATH 113 Linear Algebra and Matrix Theory</td>
<td></td>
</tr>
<tr>
<td>CS 103 Mathematical Foundations of Computing</td>
<td></td>
</tr>
<tr>
<td>Statistics/Probability. Select one:</td>
<td>3-4</td>
</tr>
<tr>
<td>EE 178 Probabilistic Systems Analysis (Preferred)</td>
<td></td>
</tr>
<tr>
<td>CS 109 Introduction to Probability for Computer Scientists</td>
<td></td>
</tr>
</tbody>
</table>

### Science

Minimum 12 units

Select one sequence:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYSICS 41 Mechanics &amp; EE 42 Introduction to Electromagnetics and Its Applications ^5</td>
<td>12</td>
</tr>
<tr>
<td>PHYSICS 41 Mechanics &amp; PHYSICS 43 Electricity and Magnetism ^3</td>
<td></td>
</tr>
<tr>
<td>PHYSICS 61 Mechanics and Special Relativity &amp; PHYSICS 63 Electricity, Magnetism, and Waves</td>
<td></td>
</tr>
</tbody>
</table>

**Science elective. One additional 4-5 unit course from approved list in Undergraduate Handbook, Figure 4-2.**

### Technology in Society

One course, see Basic Requirement 4 in the School of Engineering section. The course taken must be on the School of Engineering Approved Courses list, Fig 4-3, the year it is taken.

### Engineering Topics

Minimum 60 units comprised of: Engineering Fundamentals (minimum 10 units), Core Electrical Engineering Courses (minimum 16 units) Disciplinary Area (minimum 17 units), Electives (maximum 17 units, restrictions apply).

### Engineering Fundamentals

2 courses required; minimum 10 units

Select one:

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 106B/ ENGR 70B</td>
<td>5</td>
</tr>
<tr>
<td>or CS 106X/ ENGR 70X</td>
<td></td>
</tr>
</tbody>
</table>

Choose one Fundamental from the Approved List; Recommended: ENGR 40A or ENGR 40B or ENGR 40M (recommended before taking EE 101A); taking CS 106A or a second ENGR 40-series course not allowed for the Fundamentals elective. Choose from table in Undergraduate Handbook, Approved List.

### Core Electrical Engineering Courses

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EE 100</td>
<td>The Electrical Engineering Profession ^4</td>
<td></td>
</tr>
<tr>
<td>EE 101A</td>
<td>Circuits I</td>
<td></td>
</tr>
<tr>
<td>EE 102A</td>
<td>Signal Processing and Linear Systems I</td>
<td></td>
</tr>
<tr>
<td>EE 108</td>
<td>Digital System Design</td>
<td></td>
</tr>
</tbody>
</table>

### Disciplinary Area

Minimum 17 units, 5 courses: 1-2 Required, 1 WIM/Design and 2-3 disciplinary area electives.

### Writing in the Major (WIM)

Select one. A single course can concurrently meet the WIM and Design Requirements.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EE 109 Digital Systems Design Lab (WIM/Design)</td>
<td>4</td>
</tr>
<tr>
<td>EE 133 Analog Communications Design Laboratory (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 134 Introduction to Photonics (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 153 Power Electronics (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 155 Green Electronics (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 168 Introduction to Digital Image Processing (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 191W Special Studies and Reports in Electrical Engineering (WIM, Department approval required)</td>
<td></td>
</tr>
<tr>
<td>EE 264W Digital Signal Processing (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>CS 194W Software Project (WIM/Design)</td>
<td></td>
</tr>
</tbody>
</table>

### Design Course

Select one. Students may select their Design course from any Disciplinary Area.

<table>
<thead>
<tr>
<th>Course</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>EE 109 Digital Systems Design Lab (WIM/Design)</td>
<td>3-5</td>
</tr>
<tr>
<td>EE 133 Analog Communications Design Laboratory (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 134 Introduction to Photonics (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 153 Power Electronics (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 155 Green Electronics (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 168 Introduction to Digital Image Processing (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 262 Two-Dimensional Imaging (Design)</td>
<td></td>
</tr>
<tr>
<td>EE 264 Digital Signal Processing (Design)</td>
<td></td>
</tr>
<tr>
<td>EE 264W Digital Signal Processing (WIM/Design)</td>
<td></td>
</tr>
<tr>
<td>EE 267 Virtual Reality (Design)</td>
<td></td>
</tr>
<tr>
<td>CS 194 Software Project (Design)</td>
<td></td>
</tr>
<tr>
<td>CS 194W Software Project (WIM/Design)</td>
<td></td>
</tr>
</tbody>
</table>

### Electives

Minimum 17 units. Students may select electives from the disciplinary areas; from the multidisciplinary elective areas; or any combination of disciplinary and multidisciplinary areas. May include up to two additional Engineering Fundamentals, any CS 193 course and any letter graded EE courses (minus any previously noted restrictions). Freshman and Sophomore seminars, EE 191 and CS 106A do not count toward the 60 units. Students may have fewer elective units if they have more units in their disciplinary area.

---

1. Math 41 and Math 42 are no longer offered and have been replaced by Math 19, Math 20, and Math 21.
2. MATH 52 may be taken in place of MATH 51. CME 102 can be taken in place of MATH 53.
3. EE 42 may be used in place of PHYSICS 43 (if not used in EE electives area). The EE introductory class ENGR 40A and ENGR 40B or ENGR 40M may be taken concurrently with either EE 42 or PHYSICS 43. There are no prerequisites for ENGR 40A and ENGR 40B or ENGR 40M.
4. For upper division students, a 200-level seminar in their disciplinary area will be accepted, on petition.
5. Students may petition to have either PHYSICS 65 or the combination of PHYSICS 45 and PHYSICS 70 count as an alternative to EE 65.

To satisfy Design, must take EE 264 or EE 267 for 4 units and complete the laboratory project.
must complete a minimum of 23-25 units, as follows:

The options for completing a minor in EE are outlined below. Students
are eligible to submit an application. Applications must be submitted by
Autumn quarter of the senior year, be signed by the thesis adviser and
second reader (one must be a member of the EE Faculty), and include an
honors proposal. Students need to declare honors on Axess.

In order to receive departmental honors, students admitted to the honors
program must:

1. Submit an application, including the thesis proposal, by autumn
quarter of senior year signed by the thesis advisor and second reader
(one must be a member of the Electrical Engineering faculty).

2. Declare the EE Honors major in Axess before the end of autumn
quarter of senior year.

3. Maintain a grade point average of at least 3.5 in Electrical
Engineering courses.

4. Complete at least 10 units of EE 191 or EE 191W with thesis advisor
for a letter grade. EE 191 units do not count toward the required 60
units, with the exception of EE 191W if approved to satisfy WIM.

5. Submit one final copy of the honors thesis approved by the advisor
and second reader to the EE Degree Progress Officer by May 15.

6. Attend poster and oral presentation held at the end of spring quarter
or present in another suitable forum approved by the faculty adviser.

Electrical Engineering (EE) Minor
The options for completing a minor in EE are outlined below. Students
must complete a minimum of 23-25 units, as follows:

In addition, four letter-graded EE courses at the 100-level or higher must be taken (12 units minimum). CS 107 is required as a prerequisite for EE 180, but can count as one of the four classes.

Master of Science in Electrical Engineering

Students with undergraduate degrees in physics, mathematics, or related sciences, as well as in various branches of engineering, are invited to apply for admission. They should typically be able to complete the master’s degree in five quarters; note that many courses are not taught during the summer. Capable students without formal undergraduate preparation in electrical engineering may also be admitted for graduate study. Such students may have graduated in any field and may hold either the B.S. or B.A. degree. Graduate study in electrical engineering demands that students be adequately prepared in areas such as circuits, digital systems, fields, lab work, mathematics, and physics.

It is the student’s responsibility, in consultation with an adviser, to determine whether the prerequisites for advanced courses have been met. Prerequisite courses ordinarily taken by undergraduates may be included as part of the graduate program of study. However, if the number of these is large, the proposed program may contain more than the minimum 45 units, and the time required to meet the degree requirements may be increased.

The master’s degree program may provide advanced preparation for professional practice or for teaching at the junior college level. The faculty does not prescribe specific courses to be taken. Each student, with the help of a program adviser, prepares an individual program and submits it to the department for approval. The Program Proposal must be submitted to the Degree Progress Office before the end of the first quarter of graduate study (second quarter for Honors Cooperative Program students); a final revised version is due early in the final quarter of study, prior to degree completion. Detailed requirements and instructions are available at http://ee.stanford.edu/gradhandbook. All requirements for a master’s degree must be completed within three years after the student’s first term of enrollment in the master’s program (five years for Honors Cooperative Program students).

University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Master of Science with Distinction in Research

A student who wishes to pursue the M.S. in EE with distinction in research must first identify a faculty adviser who agrees to supervise and support the research work. The research adviser must be a member of the Academic Council and must hold an appointment in Electrical Engineering. The student and principal adviser must also identify another faculty member, who need not be in the Department of Electrical Engineering, to serve as a secondary adviser and reader for the research report. In addition, the student must complete the following requirements beyond those for the regular M.S. in EE degree:

1. Research Experience—The program must include significant research experience at the level of a half-time commitment over the course of three academic quarters. In any given quarter, the half-time research commitment may be satisfied by:
   a. a 50 percent appointment to a departmentally supported research assistantship,
   b. 6 units of independent study (EE 300 or EE 391)
   c. a prorated combination of the two (such as a 25 percent research assistantship supplemented by 3 units of independent study).
   d. An equivalent research experience while fully supported on a Stanford-funded or externally funded fellowship. Student and research adviser must document the planned research experience before the quarter starts and its completion at the end. Note: Fellowship must provide full support at the 10-unit tuition level, and allow the student to pursue degree-related research in addition to his/her full-time course enrollment. This research must be carried out under the direction of the primary or secondary adviser.

2. Supervised Writing and Research—In addition to the research experience outlined in the previous requirement, students must enroll in at least 3 units of independent research (EE 300 or EE 391) under the direction of their primary or secondary adviser. These units should be closely related to the research described in the first requirement, but focused more directly on the preparation of the research report described in the next section. The writing and research units described in parts (1) and (2) may be counted toward the 45 units required for the degree.

3. All independent study units (EE 300 or EE 391) must be taken for letter grades and a GPA of 3.0 (B) or better must be maintained.

4. Research Report—Students must complete a significant report describing their research and its conclusions. The research report represents work that is publishable in a journal or at a high-quality conference, although it is presumably longer and more expansive in scope than a typical conference paper. A copy of the research report must be submitted to the student services office in the department three weeks before the beginning of the examination period in the student’s final quarter. Both the primary and secondary adviser must approve the research report before the distinction-in-research designation can be conferred.

The Honors Cooperative Program

Many of the department’s graduate students are supported by the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in nearby companies to be part-time master’s students in Electrical Engineering while continuing nearly full-time professional employment. Prospective HCP students follow the same admission process and must meet the same admission requirements as full-time master’s students. For more information regarding the Honors Cooperative Program, see the “School of Engineering” section of this bulletin.
Joint Electrical Engineering and Law Degree (M.S./J.D.)

The Department of Electrical Engineering and the School of Law offer a joint degree program leading to an M.S. degree in EE combined with a J.D. degree. The J.D./M.S. program is designed for students who wish to prepare themselves for careers that involve both Law and Electrical Engineering.

Students interested in this joint degree program must apply to and gain admission separately from the Department of Electrical Engineering and the School of Law, and as an additional step, secure consent from both academic units to pursue both degrees simultaneously. Interest in the program should be noted on a student’s application to each academic unit. A student currently enrolled in either the Department of Electrical Engineering or the School of Law may apply for admission to the other academic unit and for joint degree status after commencing study in that unit.

Joint Electrical Engineering and Master’s in Business Administration Degree (M.S./M.B.A.)

The Department of Electrical Engineering and the Graduate School of Business offer a joint degree program leading to an M.S. degree in EE combined with an M.B.A. degree. The joint program offers students an opportunity to develop advanced technical and managerial skills in preparation for careers in existing and new technology ventures.

Admission to the joint M.S./M.B.A. program requires that students apply and be accepted independently to both the Electrical Engineering Department at the School of Engineering and the Graduate School of Business. Students may apply concurrently, or elect to begin their course of study in EE and apply to the GSB during their first year.

See the EE Graduate Handbook (https://stanford.box.com/s/dhubl4fffcupuj49zn1k9b8py57f97bp) for more information about the joint degree programs.

Doctor of Philosophy in Electrical Engineering

The University requirements for the Ph.D. degree are described in the “Graduate Degrees” section of this bulletin.

Admission to a graduate program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement, satisfactory performance on a qualifying examination, and sponsorship by two faculty members. Enrollment in EE 391, Special Studies, is recommended as a means for getting acquainted with a faculty member who might be willing to serve as the dissertation advisor.

Students admitted to the Ph.D. program must sign up to take the department qualifying examination, given once a year in winter quarter. Students are allowed two attempts to pass the examination. Students are required to take the exam in their first year of study. Students who have never taken the qualifying examination by the end of the second year of study will be dismissed from the Ph.D. program for failure to progress. Such students may be allowed to complete a master’s degree in Electrical Engineering instead. Students who do not pass the qualifying examination after two attempts will be dismissed from the Ph.D. program for failure to progress. Such students may be allowed to complete a master’s degree in Electrical Engineering instead.

Upon completion of the qualifying examination and after securing agreement by two faculty members to serve as dissertation adviser and second reader, the student files an Application for Candidacy for Doctoral Degree. The dissertation adviser must be a member of the Academic Council. One of the two faculty members must have either a full, joint or courtesy appointment in the Electrical Engineering department. Students are required to advance to candidacy prior to the end of their second year in the graduate program. Students who do not advance to candidacy by the end of their second year will be dismissed from the Ph.D. program for failure to progress.

Only after receiving department approval of the Application for Candidacy does the student become a candidate for the Ph.D. degree.

For complete requirements and additional information, see the department’s web site (http://ee.stanford.edu/gradhandbook).

Financial Assistance

The department awards a limited number of fellowships, teaching and course assistantships, and research assistantships to incoming graduate students. Applying for financial assistance is part of the admission application.

Ph.D. Minor in Electrical Engineering

For a minor in Electrical Engineering, students must fulfill the M.S. degree depth requirement, complete at least 20 units of lecture course work at the 200-level or higher in Electrical Engineering courses (of which 15 units must be letter-graded), and have the Application for Ph.D. Minor approved by the EE department and the major department. A grade point average of at least 3.35 on these courses is required.

Chair: Abbas El Gamal (through December 2017); Stephen Boyd (effective January 2018)

Associate Chairs: Robert W. Dutton (Undergraduate Education), Olav Solgaard (Graduate Education), Howard Zebker (Admissions)

Academic Affairs Committee Chair: Joseph M. Kahn

Associate Professors: Audrey Bowden, Dawson Engler, John T. Gill III, Sachin Katti, Philip Levis, Eric Pop

Assistant Professors: Amin Arbabian, John Duchy, Jonathan Fan, Ayfer Ozgur Aydin, Juan Rivas, Gordon Wetzstein, Mary Wootters
Professors (Research): William J. Dally, Butrus Khuri-Yakub, Piero Pianetta

Courtesy Professors: Stacey Bent, Kim Butts-Pauly, Emmanuel Candes, Amir Dembo, Utkan Demirici, David L. Dill, Per Enge, Gary Glover, Peter Glynn, Leonidas Guibas, Monica S. Lam, Craig Levin, David Liang, Michael McConnell, John C. Mitchell, Sandy Napel, John Ousterhout, Daniel Palanker, Norbert Pelc, Julius Smith, Dan Spielman, Brian Wandell, Yinyu Ye

Courtesy Associate Professors: Mohsen Bayati, Sigrid Close, Brian Hargreaves, Ramesh Johari, Jin Hyung Lee, Amin Saberi

Courtesy Assistant Professors: Adam de la Zerda, Surya Ganguli, Paul Nuyujukian, Marco Pavone, Ram Rajagopal, Debbie Senesky, Kuang Xu, James Zou

Lecturers: Dennis Allison, Andrea Di Blas, Abbas Emami-Naeini, Trevor Feagin, Leslie Field, J. Andrew Freeman, Fred Gibbons, My T. Le, Roger Melen, Dante Muratore, Reza Nasiri, David Obershaw, Dan O’Neill, Christopher Rowen, Jatinder Singh, James Weaver

Adjunct Professors: Ahmad Bahai, Rick Bahr, Fred M. Gibbons, Dmitry Gorinevsky, Bob S. Hu, Theodore Kamins, Fred Kish, David Leeson, Fernando Mujica, Guru Parulkar, Stephen Ryu, Ronald Schafer, Ashok Srivastava, David Sussillo, John Wenstrand

Visiting Associate Professors: Chan-Byoung Chae, Hyuk-Jun Lee, Van Tam Nguyen, Jin Hong Park, Changho Suh, Shobha Vasudevan
INSTITUTE FOR COMPUTATIONAL AND MATHEMATICAL ENGINEERING

Courses offered by the Institute for Computational and Mathematical Engineering are listed under the subject code CME on the [Stanford Bulletin’s ExploreCourses web site](http://explorecourses.stanford.edu/search?sessionid=14DE1E34FEF3BE32542A01C07860506&view=catalog&catalog=8&page=0&q=CME&filter-catalognumber-CME=on&filter-coursestatus-Active=on) Stanford Bulletin’s ExploreCourses web site.

ICME is a degree granting (M.S./Ph.D.) interdisciplinary institute at the intersection of mathematics, computing, engineering and applied sciences. ICME was founded in 2004, building upon the Scientific Computing and Computational Mathematics Program (est. 1989).

At ICME, we design state-of-the-art mathematical and computational models, methods, and algorithms for engineering and science applications. The program collaborates closely with engineers and scientists in academia and industry to develop improved computational approaches and advance disciplinary fields. In particular, it leverages Stanford's strength in engineering applications in the physical, biological, mathematical, and information sciences, and has established connections with nearly 20 departments across five schools at Stanford.

The program identifies research areas that would benefit from a multidisciplinary approach in which computational mathematics plays a role. This multidisciplinary intellectual environment is a core strength of ICME, with interaction among students and faculty with diverse backgrounds and expertise. Students and faculty are active in many research areas: aerodynamics and space applications, fluid dynamics, protein folding, data science including machine learning and recommender systems, ocean dynamics, climate modeling, reservoir engineering, computer graphics, financial mathematics, and many more.

The program trains students and scholars from across Stanford in mathematical modeling, scientific computing, and advanced computational algorithms at the undergraduate and graduate levels. Courses typically provide strong theoretical foundations for the solution of real world problems and numerical computations to facilitate application of mathematical techniques and theories. Training offered includes matrix computations, computational probability and combinatorial optimization, optimization, stochastics, numerical solution of partial differential equations, parallel computer algorithms, and new computing paradigms, amongst others.

ICME offers service courses for undergraduates and graduate students to fulfill departmental requirements, core courses for master's and doctoral students in Computational and Mathematical Engineering, and specialized electives in various application areas.

The ICME master’s program offers both specialized and general tracks. Currently, the program is offering specialized tracks in Computational Geosciences, Data Science, Imaging Science, and Mathematical and Computational Finance.

Graduate Programs in Computational and Mathematical Engineering

University regulations governing the M.S. and Ph.D. degrees are described in the “Graduate Degrees (p. 50)” section of this bulletin.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through coursework in mathematical modeling, scientific computing, advanced computational algorithms, and a set of courses from a specific area of application or field. The latter includes computational geoscience, data sciences, imaging sciences, mathematical and computational finance and other interdisciplinary areas that combine advanced mathematics with the classical physical sciences or with challenging interdisciplinary problems emerging within disciplines such as business, biology, medicine, and information.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Computational and Mathematical Engineering and related fields.

Master of Science in Computational and Mathematical Engineering

The University's basic requirements for the M.S. degree are discussed in the “Graduate Degrees” (p. 50) section of this bulletin. The following are specific departmental requirements.

The M.S. degree in Computational and Mathematical Engineering is intended as a terminal professional degree and does not lead to the Ph.D. program. Students interested in the doctoral program should apply directly to the Ph.D. program. Master's students who have maintained a minimum grade point average (GPA) of 3.5 are eligible to take the Ph.D. qualifying exam; those who pass this examination and secure a research adviser (three quarters of continuous documented research) may continue into the Ph.D. program upon acceptance by the institute.

Admission

Prospective applicants should consult the Graduate Admissions ([https://studentaffairs.stanford.edu/gradadmissions](https://studentaffairs.stanford.edu/gradadmissions)) and the ICME admissions web pages ([https://icme.stanford.edu/admissions](https://icme.stanford.edu/admissions)) for complete information on admission requirements and deadlines.

Prerequisites

Fundamental courses in mathematics and computing may be needed as prerequisites for other courses in the program. Check the prerequisites of each required course. Recommended preparatory courses include advanced undergraduate level courses in linear algebra, probabilities, introductory courses in PDEs, stochastics, and numerical methods and proficiency in programming.

Applications to the M.S. program and all supporting documents must be submitted and received online by January 9, 2018, the deadline published on ICME admissions web page ([https://icme.stanford.edu/admissions/deadlines](https://icme.stanford.edu/admissions/deadlines)).

Coterminal Master's Program

Stanford undergraduates who want to apply for the coterminal master’s degree must submit their application no later than eight weeks before the start of the proposed admit quarter. The application must give evidence that the student possesses a potential for strong academic performance at the graduate level. Graduate Record Examination (GRE) General Test scores are required for application review. A student is eligible to apply for admission once the following conditions have been met:

- completion of six non-Summer quarters at Stanford or two non-Summer quarters at Stanford for transfer students
Institute for Computational and Mathematical Engineering

numbered 200 or above. Courses below 200 level require special approval

A candidate is required to complete a program of 45 units of courses

Requirements

highlight emerging research in engineering and sciences.

scientific computing and professional computing skills. Seminars

of one’s choosing. Programming requirement ensures proficiency in

and engineering disciplines and augment breadth and depth electives

and seminars. Core courses provide instruction in mathematical and

and engineering course work is necessary for successful completion of

The master’s program consists of 45 units of course work taken at

in research projects during the master’s program, particularly to explore

an interest in continuing to the doctoral program. Although there is no

in research projects during the master’s program, particularly to explore

students interested in continuing to the doctoral program must maintain

a 3.5 or better grade point average in the program.

Requirement 1: Foundational (12 units)

Students must demonstrate foundational knowledge in the field by

completing four of the six core courses. Courses in this area must be

taken for letter grades. Deviations from the core curriculum must be

justified in writing and approved by the student’s ICME adviser and the

chair of the ICME curriculum committee. Courses that are waived may

not be counted towards the master’s degree.

General CME Track

This track is designed for students interested in studying and developing computational tools in those aspects of applied mathematics central
to modeling in the physical and engineering sciences. The curriculum consists of core computational and mathematical engineering courses

and programming course work, extensive breadth and depth electives, and seminars. Core courses provide instruction in mathematical and

computational tools applicable to a wide range of scientific, industrial and engineering disciplines and augment breadth and depth electives of one’s choosing. Programming requirement ensures proficiency in scientific computing and professional computing skills. Seminars

highlight emerging research in engineering and sciences.

Requirements

A candidate is required to complete a program of 45 units of courses

numbered 200 or above. Courses below 200 level require special approval

from the program office. At least 36 of these must be graded units,

passed with a grade point average (GPA) of 3.0 (B) or better. Master’s

students interested in continuing to the doctoral program must maintain

a 3.5 or better grade point average in the program.

Course transfers are not possible after the bachelor’s degree has been

conferred.

The University requires that the graduate adviser be assigned in the

student’s first graduate quarter even though the undergraduate career

may still be open. The University also requires that the Master’s Degree

Program Proposal be completed by the student and approved by the

department by the end of the student’s first graduate quarter.

Course transfers are not possible after the bachelor’s degree has been

conferred.

The University requires that the graduate adviser be assigned in the

student’s first graduate quarter even though the undergraduate career

may still be open. The University also requires that the Master’s Degree

Program Proposal be completed by the student and approved by the

department by the end of the student’s first graduate quarter.

Requirements for the Master of Science in

Computational and Mathematical Engineering

The master’s program consists of 45 units of course work taken at

Stanford. No thesis is required; however, students may become involved

in research projects during the master’s program, particularly to explore

an interest in continuing to the doctoral program. Although there is no

specific background requirement, significant exposure to mathematics

and engineering course work is necessary for successful completion of

the program.

There are five tracks in the master’s program:

• General CME

• Computational Geosciences

• Data Science

• Imaging Science

• Mathematical and Computational Finance

General CME Track

This track is designed for students interested in studying and developing computational tools in those aspects of applied mathematics central
to modeling in the physical and engineering sciences. The curriculum consists of core computational and mathematical engineering courses

and programming course work, extensive breadth and depth electives, and seminars. Core courses provide instruction in mathematical and

computational tools applicable to a wide range of scientific, industrial and engineering disciplines and augment breadth and depth electives of one’s choosing. Programming requirement ensures proficiency in scientific computing and professional computing skills. Seminars

highlight emerging research in engineering and sciences.

Requirements

A candidate is required to complete a program of 45 units of courses

numbered 200 or above. Courses below 200 level require special approval

from the program office. At least 36 of these must be graded units,

passed with a grade point average (GPA) of 3.0 (B) or better. Master’s

students interested in continuing to the doctoral program must maintain

a 3.5 or better grade point average in the program.

Requirement 1: Foundational (12 units)

Students must demonstrate foundational knowledge in the field by

completing four of the six core courses. Courses in this area must be

taken for letter grades. Deviations from the core curriculum must be

justified in writing and approved by the student’s ICME adviser and the

chair of the ICME curriculum committee. Courses that are waived may

not be counted towards the master’s degree.

Requirement 2: Programming (3 units)

Three units of programming course work demonstrating programming proficiency. All graduate students in the program are required to

complete this programming course for letter grade. Programming proficiency at the level of CME 211 is a hard prerequisite; CME 211 can be

applied towards elective requirement.

<table>

Requirement 3: Breadth Electives (18 units)

18 units of general electives to demonstrate breadth of knowledge in

technical area. The elective course list represents automatically accepted

electives within the program. However, electives are not limited to the

list below, and the list is expanded on a continuing basis. The elective

part of the ICME program is meant to be broad and inclusive of relevant

courses of comparable rigor to ICME courses. It is recommended that the

selected courses include offerings from (at least) two engineering departments, in addition to CME course work. Courses

outside this list can be accepted as electives subject to approval by the

student’s ICME adviser.

Computer Science
Computational Geosciences Track

The Computational Geosciences (CompGeo) track is designed for students interested in the skills and knowledge required to develop efficient and robust numerical solutions to Earth Science problems using high-performance computing. The CompGeo curriculum is based on four fundamental areas: modern programming methods for Science and Engineering, applied mathematics with an emphasis on numerical methods, algorithms and architectures for high-performance computing and computationally oriented Earth Sciences courses. Earth Sciences/computational project courses give practice in applying methodologies and concepts. CompGeo students are required to complete general and focused application electives (Requirements 3 and 4) from the approved list of courses from the Computational Geosciences program. All other requirements remain the same as set forth above.

Note: Students interested in pursuing the ICME M.S. in the Computational Geosciences (CompGeo) track are encouraged to contact the Computational Geosciences Program Director before applying.

Students are required to take 45 units of course work, and research credits to earn a master’s degree in Computational Geosciences track. The course work follows the requirements of the ICME M.S. degree as above with additional restrictions placed on the general and focused electives.

Requirement 1: Foundational (12 units)
Identical to the general CME master’s track requirement.

Requirement 2: Programming (3 units)
3 units of programming course work demonstrating programming proficiency. All graduate students in the program are required to complete programming course for letter grade. Programming proficiency at the level of CME 211 is a hard prerequisite for CME 212; CME 211 can be applied towards elective requirement.

Requirement 3: Breadth Electives in Geosciences (18 units)
18 units of general electives to demonstrate breadth of knowledge in technical area. Courses are currently offered but are not limited to the following specific areas of the School of Earth Sciences:

1. Reservoir Simulation
2. Geophysical Imaging
3. Tectonophysics/Geomechanics
4. Climate/Atmosphere/Ocean

Requirements: 45 units total

The Earth Science courses, offered in EESS, ERE, GES, and Geophysics is selected based on the area of the student’s interest and their research/thesis work, along with the advice and consent of the student’s adviser. Students are encouraged to choose a range of courses in order to guarantee breadth of knowledge in Earth Sciences. A maximum of one non-computationally-oriented course can be counted towards the master’s degree requirements. Following is a list of recommended courses (grouped by area) that can be taken to fulfill the Geosciences course requirement.

### Environmental/Climate/Hydrogeology

- **ESS 220** Physical Hydrogeology 4
- **ESS 221** Contaminant Hydrogeology and Reactive Transport 4
- **ESS 246** Atmosphere, Ocean, and Climate Dynamics: the Ocean Circulation 3
- **CEE 262** Hydrodynamics 3-4
- **CEE 262B** Transport and Mixing in Surface Water Flows 3-4
- **CEE 262C** Hydrodynamics and Sediment Transport Modeling 3
- **CEE 263A** Air Pollution Modeling 3-4
- **CEE 361** Turbulence Modeling for Environmental Fluid Mechanics 2-4

### Geophysical Imaging

- **EE 256** Numerical Electromagnetics 3
- **GEOPHYS 210** Basic Earth Imaging 2-3
- **GEOPHYS 211** Environmental Soundings Image Estimation 3
- **GEOPHYS 280** 3-D Seismic Imaging 2-3
- **GEOPHYS 287** Earthquake Seismology 3-5
- **General Computational/Mathematical Geoscience**
  - **CEE 362** Imaging with Incomplete Information 3-4
  - **CHEM 275** Advanced Physical Chemistry 3
  - **CME 372** Applied Fourier Analysis and Elements of Modern Signal Processing 3

### Reservoir Simulation/Fluid Flow

- **ENERGY 223** Reservoir Simulation 3-4
- **ENERGY 224** Advanced Reservoir Simulation 3

### Subsurface/Reservoir Characterization

- **ENERGY 241** Seismic Reservoir Characterization 3-4
- **GEOPHYS 202** Reservoir Geomechanics 3
- **GEOPHYS 260** Rock Physics for Reservoir Characterization 3

### Structural/Tectonophysics/Geomechanics

- **CEE 292** Continuum Mechanics 3
- **CEE 294** Computational Poromechanics 3

### Geophysics

- **GEOPHYS 220** Ice, Water, Fire 3-5
- **GEOPHYS 288A** Crustal Deformation 3-5
- **GEOPHYS 288B** Crustal Deformation 3-5
- **GEOPHYS 290** Tectonophysics 3

### Data Science Track

The Data Science track develops strong mathematical, statistical, computational and programming skills through the foundational and programming requirements. In addition, it provides a fundamental data science education through general and focused electives requirement from courses in data sciences and related areas. Course choices are limited to predefined courses from the data sciences and related courses group. Programming requirement (requirement 2) is extended to 6 units and includes course work in advanced scientific programming and high performance computing. The final requirement is a practical component (requirement 5) for 6 units to be completed through capstone project, data science clinic, or other courses that have strong hands-on or practical component such as statistical consulting.

### Requirement 4: Practical Component (9 units)

9 units of focused research in computational geosciences. Students are required to either complete a Research Project or an Internship as described below.

<table>
<thead>
<tr>
<th>Internship and/or Research Project, enrolling in a course such as:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>EARTH 400</strong> Directed Research 3</td>
</tr>
<tr>
<td><strong>EARTH 401</strong> Curricular Practical Training 1</td>
</tr>
</tbody>
</table>

### Research Project

Students who plan to apply to the Ph.D. program need to take 9 units of research. Students will work with the CompGeo program director to find an appropriate adviser and research topic and then enroll in EARTHSCI 400: Directed Research (or a similar SES research course). The successful outcome of a Research Project can be:

1. an oral presentation at an international meeting requiring an extended abstract
2. a publication submission in a peer reviewed journal.
3. a written report

### Internship

As an alternative to the Research Project students have the option of an internship which is recommended for those students interested in a terminal degree. The individual student is responsible for securing and organizing the internship and is required to obtain a faculty adviser and submit a written report on the internship project. Credit for the internship will be obtained through EARTHSCI 401: Curricular Practical Training (1 unit) and in this case only 8 units of research are required.

### Requirement 5: Seminar (3 units)

3 units of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement. One of the required seminars for CompGeo must be a seminar course chosen in concert with the student’s academic adviser among the seminars offered by the the School of Earth, Energy and Environmental Sciences.

### Requirement 1: Foundational (12 units)

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student’s ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master’s degree.
or CME 309 Randomized Algorithms and Probabilistic Analysis

**Requirement 2: Programming (6 units)**

To ensure that students have a strong foundation in programming, 3 units of advanced scientific programming for letter grade at the level of CME 212 and three units of parallel computing for letter grades are required. Programming proficiency at the level of CME 211 is a hard prerequisite for CME 212; CME 211 can be applied towards elective requirement.

<table>
<thead>
<tr>
<th>Units</th>
<th>Course</th>

</tr>
</tbody>
</table>

**Requirement 5: Practical component (6 units)**

Students are required to take 6 units of practical component that may include any combination of:

- Master’s Research (CME 291): A capstone project, supervised by a faculty member and approved by the steering committee; should be computational in nature. Students should submit a one-page proposal, supported by the faculty member, to ICME student services for approval at least one quarter before.
- Project labs offered by Stanford Data Lab: ENGR 150 Data Challenge Lab, ENGR 350 Data Impact Lab. (Limited enrollment; application required.)
- Other courses that have a strong hands-on and practical component, such as STATS 390 Consulting Workshop up to 1 unit.

**Imaging Science Track**

The Imaging Science track is designed for students interested in the skills and knowledge required to develop efficient and robust computational tools for imaging science. The curriculum is based on four fundamental areas: mathematical models and analysis for imaging sciences and inverse problems, tools and techniques from modern imaging sciences from medicine, biology, physics/chemistry, and earth science, algorithms in numerical methods and scientific computing and high performance computing skills and architecture oriented towards imaging sciences.

The course work follows the requirements of the general master’s degree in the core course requirement. The general and focused elective requirements (requirements 3 and 4 below) are limited to approved courses listed below. Programming requirement (requirement 2) is extended to 6 units and includes course work in advanced scientific programming and high performance computing.

**Requirement 1: Foundational (12 units)**

Identical to the general ICME master’s program; see above.

**Requirement 2: Programming (6 units)**

To ensure that students have a strong foundation in programming, 3 units of advanced scientific programming for letter grade at the level of CME 212 and three units of parallel computing for letter grades are required. Programming proficiency at the level of CME 211 is a hard prerequisite for CME 212; CME 211 can be applied towards elective requirement.

**Requirement 4: Specialized electives (6 units)**

6 units of focused graduate application electives, approved by the ICME graduate adviser, in the areas of engineering, mathematics, physical, biological, information, and other quantitative sciences. These courses should be foundational depth courses relevant to the student's professional development and research interests.

**Requirement 5: Seminar (3 units)**

One unit of seminar must come from MCE 500; two units are up to the student's choice of ICME graduate seminars or other approved seminars. Additional seminar units may not be counted towards the 45-unit requirement.

### Mathematical and Computational Finance Track

The Mathematical & Computational Finance (MCF) track is an interdisciplinary program that provides education in applied and computational mathematics, statistics, and financial applications for individuals with strong mathematical skills. Upon successful completion of the MCF track in the ICME master's program, students will be prepared to assume positions in the financial industry as data and information scientists, quantitative strategists, risk managers, regulators, financial technologists, or to continue on to their Ph.D. in ICME, MS&E, Mathematics, Statistics, Finance, and other disciplines.

The Institute for Computational and Mathematical Engineering, in close cooperation with Mathematics, Management Science and Engineering and Statistics provides many of the basic courses. All 45 units must be taken for letter grade only.

**Note:** This new track in the ICME master's program supersedes, beginning in the Autumn Quarter of 2014, the interdisciplinary master's program (IDP) in Financial Mathematics in the School of Humanities & Sciences.

**Units**

#### Requirement 1: Foundational (9 units)

Students must demonstrate foundational knowledge in the field by completing the following core courses. Courses in this area must be taken for letter grades. Deviations from the core curriculum must be justified in writing and approved by the student's ICME adviser and the chair of the ICME curriculum committee. Courses that are waived may not be counted towards the master's degree.

Superior academic achievement and passing the qualifying examination.

Candidate for the Ph.D. degree. Advancement to candidacy requires admission to the Ph.D. program does not imply that the student is a candidate for the Ph.D. degree. Application is submitted. Record Examination by October of the academic year in which the admissions) for additional details. Applicants should take the Graduate materials. See the institute's admissions site (https://icme.stanford.edu) for information and application must be received by December 5, 2017. See Graduate Admissions (http://gradadmissions.stanford.edu) for information and application materials. See the institute's admissions site (https://icme.stanford.edu/admissions) for additional details. Applicants should take the Graduate Record Examination by October of the academic year in which the application is submitted.

Admission to the Ph.D. program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement and passing the qualifying examination.

**Requirements**

1. Complete a minimum of 135 units of residency at Stanford, including:

   a. 45 units from the master's program requirements; all six core courses have to be completed for letter grade.
   b. 27 units of electives for letter grade in an area planned with the student's Ph.D. advisor; 12 of these units should come from ICME specialized electives with significant computational content such as the CME 320-380 series. The focused and specialized elective component of the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. The elective course list following represents automatically accepted electives within the program. However, electives are not limited to the list below, and the list is expanded on a continuing basis; courses outside the list can be accepted as electives subject to approval by the student's ICME adviser. Research, directed study, and seminar units are excluded.
   c. 3 units of programming elective demonstrating programming proficiency. Students are required to complete programming course at the level of CME 213 Introduction to parallel computing using MPI, openMP, and CUDA or higher for letter grade.
   d. 60 units of thesis research

2. Maintain a grade point average (GPA) of 3.5.
3. Pass the ICME qualifying examination before the beginning of the second year.
4. Declare candidacy by the end of the second year.
5. File dissertation reading committee form by the end of third year.
6. Complete an approved program of original research.
7. Complete a written dissertation based on research.
8. Pass the oral examination that is a defense of the dissertation research.

### Specialized Elective List

**Doctor of Philosophy in Computational and Mathematical Engineering**

The University's basic requirements for the Ph.D. degree are outlined in the "Graduate Degrees" (p. 50) section of this bulletin.

Applications to the Ph.D. program and all required supporting documents must be received by December 5, 2017. See Graduate Admissions (http://gradadmissions.stanford.edu) for information and application materials. See the institute's admissions site (https://icme.stanford.edu/admissions) for additional details. Applicants should take the Graduate Record Examination by October of the academic year in which the application is submitted.

Admission to the Ph.D. program does not imply that the student is a candidate for the Ph.D. degree. Advancement to candidacy requires superior academic achievement and passing the qualifying examination.

**Requirements**

1. Complete a minimum of 135 units of residency at Stanford, including:

   a. 45 units from the master's program requirements; all six core courses have to be completed for letter grade.
   b. 27 units of electives for letter grade in an area planned with the student's Ph.D. advisor; 12 of these units should come from ICME specialized electives with significant computational content such as the CME 320-380 series. The focused and specialized elective component of the ICME program is meant to be broad and inclusive of relevant courses of comparable rigor to ICME courses. The elective course list following represents automatically accepted electives within the program. However, electives are not limited to the list below, and the list is expanded on a continuing basis; courses outside the list can be accepted as electives subject to approval by the student's ICME adviser. Research, directed study, and seminar units are excluded.
   c. 3 units of programming elective demonstrating programming proficiency. Students are required to complete programming course at the level of CME 213 Introduction to parallel computing using MPI, openMP, and CUDA or higher for letter grade.
   d. 60 units of thesis research

2. Maintain a grade point average (GPA) of 3.5.
3. Pass the ICME qualifying examination before the beginning of the second year.
4. Declare candidacy by the end of the second year.
5. File dissertation reading committee form by the end of third year.
6. Complete an approved program of original research.
7. Complete a written dissertation based on research.
8. Pass the oral examination that is a defense of the dissertation research.

### Requirement 4: Data Science electives (9 units)

Data Science electives should demonstrate breadth of knowledge in the technical area; all nine units should be taken for letter grade. The elective course list is defined below. Courses outside this list can be accepted as electives subject to approval prior to taking the course. Petitions for approval should be submitted to student services.

**Institute for Computational and Mathematical Engineering**

Stanford University
Ph.D. Minor in Computational and Mathematical Engineering

For a minor in Computational and Mathematical Engineering (CME), a doctoral candidate must complete 21 units of approved graduate level courses. These should include three CME core courses and three CME graduate electives at the 300 level or above and a programming course at the level of CME212 or higher. All courses must be taken for a letter grade and passed with a grade of ‘B’ or better. Elective courses cannot be cross listed with the primary department. Minor programs should be developed in close discussion between the student and the student’s primary Ph.D. adviser.

Emeriti: (Professors) Gunnar Carlsson (Mathematics), (Professors, Research) Walter Murray (Management Science and Engineering), Arogyaswami Paulraj (Electrical Engineering), Michael Saunders (Management Science and Engineering)

Director: Margot Gerritsen (Energy Resources Engineering)

Co-Director: Gianluca Iaccarino (Mechanical Engineering)

Professors: Juan Alonso (Aeronautics and Astronautics), Biondo Biondi (Geophysics), Stephen Boyd (Electrical Engineering), Carlos D. Bustamante (Biomedical Data Science, Genetics), Emanuel Candès (Mathematics, Statistics), Persi Diaconis (Mathematics, Statistics), David Donoho (Statistics), Charbel Farhat (Aeronautics and Astronautics, Mechanical Engineering), Ronald Fedkiw (Computer Science), Peter Glynn (Management Science and Engineering), Ashish Goel (Management Science and Engineering), Leonidas Guibas (Computer Science), Pat Hanrahan (Computer Science, Electrical Engineering), Jerry Harris (Geophysics), Trevor Hastie (Mathematics, Statistics), Doug James (Computer Science), Peter Kitanidis (Civil and Environmental Engineering), Tze Leung Lai (Statistics), Sanjiva Lele (Mechanical Engineering, Aeronautics and Astronautics), Parviz Moin (Mechanical Engineering), Brad Osgood (Electrical Engineering), Vijay Pande (Chemistry), George Papanicolaou (Mathematics), Peter Pinsky (Mechanical Engineering), Lenya Ryzhik (Mathematics), Eric Shaqfeh (Chemical Engineering, Mechanical Engineering), Jonathan Taylor (Statistics), Hamdi Tchelepi (Energy Resources Engineering), Benjamin Van Roy (Management Science and Engineering, Electrical Engineering), Andras Vasy (Mathematics), Lawrence Wein (Graduate School of Business), Wing Wong (Statistics), Yinyu Ye (Management Science and Engineering), Lexing Ying (Mathematics, Institute for Computational and Mathematical Engineering)

Associate Professors: Eric Darve (Mechanical Engineering), Ron Dror (CS, Institute for Computational and Mathematical Engineering), Eric Dunham (Geophysics), Oliver Fringer (Civil and Environmental Engineering), Margot Gerritsen (Energy Resources Engineering), Kay Giesecke (Management Science and Engineering), Gianluca Iaccarino (Mechanical Engineering), Ramesh Johari (Management Science and Engineering), Adrian Lew (Mechanical Engineering), Alison Marsden (Pediatrics, Bioengineering), Amin Saberi (Management Science and Engineering), Andrew Spakowitz (Chemical Engineering)

Assistant Professors: Ali Mani (Mechanical Engineering), Marco Pavone (Aeronautics and Astronautics), Bala Rajaratnam (Statistics, Environmental and Earth System Sciences), Aaron Daniel Sidford (Management Science and Engineering), Jenny Suckale (Geophysics), Johan Ugander (Management Science and Engineering)

Professors (Research): Antony Jameson (Aeronautics and Astronautics)

Senior Lecturer: Vadim Khayms

Lecturer: Hung Le

Adjunct Professor: Reza Bosagh-Zadeh, Hadley Wickham

Academic Staff: William Behman, Kapil Jain

Courses of interest to students in the department may include:

Courses offered by the Department of Management Science and Engineering are listed under the subject code MS&E on the [Stanford Bulletin’s ExploreCourses web site](https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&q=MS%26E&filter-departmentcode-MS%26E=on&filter-coursesstatus-Active=on&filter-term-Autumn=on)Stanford Bulletin’s ExploreCourses web site.

The Department of Management Science and Engineering leads at the interface of engineering, business, and public policy. The department’s mission is, through education and research, to advance the design, management, operation, and interaction of technological, economic, and social systems. The department’s engineering research strength is integrated with its educational program at the undergraduate, master’s, and doctoral levels: graduates of the program are trained as engineers and future leaders in technology, policy, and industry. Research and teaching activities are complemented by an outreach program that encourages the transfer of ideas to the environment of Silicon Valley and beyond.

Management Science and Engineering (MS&E) provides programs of education and research by integrating three basic strengths:

1. depth in conceptual and analytical foundations
2. comprehensive coverage of functional areas of application
3. interaction with other Stanford departments, Silicon Valley industry, and organizations throughout the world.

The analytical and conceptual foundations include decision and risk analysis, dynamic systems, economics, optimization, organizational science, and stochastic systems. The functional areas of application include entrepreneurship, finance, information, marketing, organizational behavior, policy, production, and strategy. Close associations with other engineering departments and with industry enrich the programs by providing opportunities to apply MS&E methods to important problems and by motivating new theoretical developments from practical experience. MS&E’s programs also provide a basis for contributing to other areas such as biotechnology, defense policy, environmental policy, information systems, and telecommunications.

Mission of the Undergraduate Program in Management Science and Engineering

The mission of the undergraduate program in Management Science and Engineering is to provide students with the fundamentals of engineering systems analysis so that they are able to plan, design, and implement complex economic and technical management systems. The program builds on the foundational courses for engineering including calculus, engineering fundamentals, and physics or chemistry as well as management science. Students complete core courses in accounting, computer science, economics, ethics, organizational theory, mathematical modeling, optimization, probability, and statistics. To personalize their exploration, students select additional courses from different areas of the department, with greater emphasis in one of them. The major prepares students for a variety of career paths, including investment banking, management consulting, faculties and process management, or for graduate school in industrial engineering, operations research, business, economics, law, medicine, or public policy.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department’s undergraduate program. Students are expected to be able:

1. to apply the knowledge of mathematics, science, and engineering;  
2. to design and conduct experiments;  
3. to design a system or components to meet desired needs;  
4. to identify, formulate, and solve engineering problems;  
5. to use techniques, skills, and modern engineering tools necessary for engineering practice;  
6. to function on multidisciplinary teams;  
7. to communicate effectively;  
8. to recognize the need for and demonstrate an ability to engage in lifelong learning;  
9. to obtain the background necessary for admission to top professional graduate engineering or business programs;  
10. to understand professional and ethical responsibility;  
11. to obtain the broad education necessary to understand the impact of engineering solutions in a global and societal context; and  
12. to obtain a knowledge of contemporary issues pertinent to the field of management science and engineering.

Graduate Programs in Management Science and Engineering

MS&E offers programs leading to the degrees of Master of Science and Doctor of Philosophy. The department also offers a coterminal B.S./M.S. degree, a dual master’s degree in cooperation with each of the other departments in the School of Engineering, and joint master’s degrees with the School of Law and the Public Policy Program.

For University coterminal degree program rules and University application forms, see the Registrar’s coterminal degrees web site [http://studentaffairs.stanford.edu/registrar/publications/#Coterm](http://studentaffairs.stanford.edu/registrar/publications/#Coterm).

Applicants for admission as graduate students in MS&E must submit the results of the verbal, quantitative, and analytical parts of the Graduate Record Examination. The deadline for application to the doctoral program is December 5, 2017, and the deadline for application to the master’s program is January 16, 2018.

Except in unusual circumstances, admission is limited to the Autumn Quarter because courses are arranged sequentially with basic courses and prerequisites offered early in the academic year.

Assistantships and Fellowships

A limited number of fellowships and assistantships are awarded each year. Applicants admitted to the doctoral program, who have indicated on their application that they would like to be considered for financial aid, are automatically considered for these assistantships and fellowships. New and returning master’s students may apply for course assistantships each quarter, but priority is given to MS&E doctoral students.

Information about loan programs and need-based aid for U.S. citizens and permanent residents can be obtained from the Financial Aid Office.

Learning Outcomes (Graduate)

The M.S. prepares engineers for a very long career addressing the critical technical and managerial needs of private and public organizations. The program emphasizes developing analytic abilities, making decisions, developing and implementing strategies while also leading people who innovate. Unlike an MBA, our master’s program addresses the technical as well as the behavioral challenges of running organizations.
and complex systems. We emphasize quantitative analytic skills and an entrepreneurial spirit.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Management Science and Engineering and related fields.

**Careers in MS&E**

MS&E students are candidates for careers in consulting, product and project management, financial analysis, and work in policy arenas. A significant number join or found start-ups. Many have become leaders in technology-based businesses which have an increasing need for analytically oriented people who understand both business and technology. Other graduates make careers tackling the problems faced by local, national, and international governments by developing new healthcare systems, new energy systems and a more sustainable environment. The major problems of the day demand an ability to integrate the technical, social and economic ways of thinking. This is precisely what the department educates its students to do.

**Bachelor of Science in Management Science and Engineering**

The program leading to the B.S. degree in Management Science and Engineering (MS&E) is outlined in the School of Engineering section of this bulletin; more information is contained in the School of Engineering’s Handbook for Undergraduate Engineering Programs. Students are encouraged to plan their academic programs as early as possible, ideally in the freshman or sophomore year. Students should not wait until they are declaring a major to consult with the department’s student services staff. This is particularly important for students who would like to study overseas or pursue another major or minor.

The undergraduate curriculum in Management Science and Engineering provides students training in the fundamentals of engineering systems analysis to prepare them to plan, design, and implement complex economic and technological management systems where a scientific or engineering background is necessary or desirable. The major prepares students for a variety of career paths, including investment banking, management consulting, facilities and process management, or for graduate school in industrial engineering, operations research, business, economics, law, medicine, or public policy.

The educational objectives of the undergraduate degree program are:

- **Principles and Skills**—provide students with a basic understanding of management science and engineering principles, including analytical problem solving and communications skills.
- **Preparation for Practice**—prepare students for practice in a field that sees rapid changes in tools, problems, and opportunities.
- **Preparation for Continued Growth**—prepare students for graduate study and self development over an entire career.
- **Preparation for Service**—develop in students the awareness, background, and skills necessary to become responsible citizens, employees, and leaders.

See also the department’s undergraduate Learning Outcomes (p. 648) for additional learning objectives.

The program builds on the foundational courses for engineering, including calculus, mathematical modeling, probability, statistics, engineering fundamentals, and physics or chemistry.

Students interested in a minor should see the Minor tab in this section.

MS&E also participates with the departments of Computer Science, Mathematics, and Statistics in a program leading to a B.S. in Mathematical and Computational Science. See the “Mathematical and Computational Science (p. 648)” section of this bulletin.

**Core**

The department core, taken for all areas, includes courses in accounting, computer science, deterministic optimization, economics, organization theory, and a capstone senior project. Through the core, students in the program are exposed to the breadth of faculty interests, and are in a good position to choose an area during the junior year.

**Areas**

The major is designed to allow a student to explore all three areas of the department in greater depth.

1. **Finance and Decision**: focuses on the design and analysis of financial and strategic plans.
2. **Operations and Analytics**: focuses on algorithms, theory, and the design and analysis of manufacturing, production, and service systems.
3. **Organizations, Technology, and Policy**: focuses on understanding, design, and analysis of organizations and public policy, particularly technology-based issues.

**Management Science and Engineering (MS&E)**

Completion of the undergraduate program in Management Science and Engineering leads to the conferral of the Bachelor of Science in Management Science and Engineering.

Math and Science must total a minimum of 44 units. Electives must come from the School of Engineering approved list, or, PSYCH 50 Introduction to Cognitive Neuroscience, or PSYCH 70 Self and Society: Introduction to Social Psychology, and may not repeat material from any other requirement. AP/IB credit for Chemistry and Physics may be used.

Engineering fundamentals plus engineering depth must total a minimum of 60 units. Recommended engineering fundamentals are E25B, E25E, E40A, E40M, and E80.

Students may petition to place out of CS 106A Programming Methodology.

Courses used to satisfy the Math, Science, Technology in Society, or Engineering Fundamental requirement may not also be used to satisfy an engineering depth requirement.

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).

Management Science and Engineering (MS&E) Minor

The following courses are required to fulfill the minor requirements:

<table>
<thead>
<tr>
<th>Background requirements (two courses)</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CME 100 Vector Calculus for Engineers</td>
<td>5</td>
</tr>
<tr>
<td>or MATH 51 Linear Algebra and Differential Calculus of Several Variables</td>
<td>5</td>
</tr>
<tr>
<td>CS 106A Programming Methodology</td>
<td>5</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Minor requirements (seven courses, letter-graded)</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS&amp;E 111 Introduction to Optimization</td>
<td>3-4</td>
</tr>
<tr>
<td>or MS&amp;E 111X Introduction to Optimization (Accelerated)</td>
<td>3-4</td>
</tr>
<tr>
<td>MS&amp;E 120 Probabilistic Analysis</td>
<td>5</td>
</tr>
<tr>
<td>MS&amp;E 121 Introduction to Stochastic Modeling</td>
<td>4</td>
</tr>
<tr>
<td>MS&amp;E 125 Introduction to Applied Statistics</td>
<td>4</td>
</tr>
<tr>
<td>MS&amp;E 180 Organizations: Theory and Management</td>
<td>4</td>
</tr>
<tr>
<td>Electives (select any two 100- or 200-level MS&amp;E courses)</td>
<td>6</td>
</tr>
</tbody>
</table>

Recommended courses

In addition to the required background and minor courses, it is recommended that students also take the following courses.

| ECON 50 Economic Analysis I | 5     |
| MS&E 140 Accounting for Managers and Entrepreneurs (may be used as one of the required electives above) | 2-4   |
| or MS&E 140X Financial Accounting Concepts and Analysis | 3     |

Coterminal Program in Management Science and Engineering

This program allows Stanford undergraduates an opportunity to work simultaneously toward a B.S. in Management Science and Engineering or another quantitative major, and an M.S. in Management Science and Engineering.

University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Master of Science in Management Science and Engineering

The M.S. degree programs require a minimum of 45 units beyond the equivalent of a B.S. degree at Stanford. All programs represent substantial progress in the major field beyond the bachelor's degree.

University requirements for the master’s degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

The master’s in Management Science and Engineer prepares engineers for a lifelong career addressing the technical and managerial needs of private and public organizations. The program emphasizes developing analytic abilities, making better decisions, and developing and executing strategies while also leading people who innovate. Unlike an M.B.A., the department’s master’s program addresses the technical as well as the behavioral challenges of running organizations and complex systems, emphasizing quantitative analytic skills and an entrepreneurial spirit.

MS&E students know math, engineering, as well as behavioral science. They can conduct experiments to design better systems, organizations and work processes. They understand how to analyze data to solve real world problems. They can develop mathematical and computational models to inform action. They know how to surface and examine unarticulated assumptions and root causes. These students can communicate effectively in the team environments found in so many contemporary organizations.

MS&E master’s students have breadth as well as depth. All are required to develop competence in optimization and analytics, organizations and decisions, and probability. In addition every student pursues a specialty in one of six areas:

1. **Financial Analytics:** Students who concentrate in Financial Analytics are prepared for careers requiring analytical rigor and the ability to innovate around market challenges. Example career paths include financial services, risk management, investment management, financial technology and data processing, financial regulation and policy, exchanges and clearing houses, and auditing and compliance. The concentration combines the in-depth study of quantitative techniques with practical, hands-on business problem solving. Students learn to use mathematical models and quantitative tools to solve complex problems in finance practice. The concentration exploits the intellectual ties between finance, operations research, computer science, and engineering. It offers a high level of flexibility and a range of elective courses that allow students to tailor the program to their specific career goals. Required courses immerse students in quantitative methods and deepen their understanding of finance fundamentals. Projects courses feature practical, data-driven team projects and case studies, fostering group learning and interaction with peers.
2. **Operations and Analytics**: Students following the Operations and Analytics track become prepared in the fundamentals and applications that are critical to careers in a fields ranging from operations management in the service, health care, production, manufacturing, computer, telecommunications, banking, industries to modern Silicon Valley information technology and data analytics. The program emphasizes a balance between the technical rigor of methodologies with lasting value and insightful modern applications and design challenges in a variety of established and emerging industries and operations environments. It offers a portfolio of courses in probabilistic modeling, optimization, simulation, algorithms, data science, networks, markets, and corresponding applications.

3. **Technology and Engineering Management**: Students who concentrate in Technology and Engineering Management are prepared for careers including product and project management, management consulting, and entrepreneurship. They acquire skills to manage technical organizations, foster innovation, and deal with rapidly evolving technologies and dynamic markets. Specialized coursework is flexible, allowing students to explore and gain depth, understanding technical organizations to develop a culture of successful innovation and entrepreneurship, along with methods for decision making under uncertainty, financial analysis, and strategic planning.

4. **Computational Social Science**: The Computational Social Science track teaches students how to apply rigorous statistical and computational methods to address problems in economics, sociology, political science, and beyond. The program prepares students for a diverse set of career paths in data science, information technology, and policy analysis. The core coursework covers fundamental statistical concepts, large-scale computation, and network analysis. Through electives, students can explore topics such as experimental design, algorithmic economics, and machine learning.

5. **Decision and Risk Analysis**: Students who specialize in Decision and Risk Analysis are prepared for careers including management consulting, policy analysis, and risk management, applying engineering systems analysis to tackle complex economic and technical management problems in the private and public sectors. They acquire the skills to identify and develop opportunities in uncertain situations while recognizing and hedging the downside risks. Specialized coursework includes the mathematical foundations for modeling in dynamic uncertain environments to value and manage uncertain opportunities and risks, applications to public policy, and an opportunity to work on a client project under faculty guidance.

6. **Energy and Environment**: The Energy and Environment track is designed for students interested in energy and environmental issues from the perspectives of public policy, nongovernmental organizations, or corporations. This track includes core courses; courses in economic analysis, energy resources, and energy/environmental policy analysis; and an individually designed concentration, typically emphasizing policy, strategy, or technology. Seminars provide insights into current corporate strategy, public policy, and research community developments. Energy/environmental project courses give practice in applying methodologies and concepts.

7. **Health Systems Modeling**: The Health Systems Modeling track is designed for students interested in healthcare operations and policy. The courses in this track emphasize the application of mathematical and economic analysis to problems in public health policy and the design and operation of healthcare services.

The master’s degree is designed to be a terminal degree program with a professional focus. The M.S. degree can be earned in one academic year (three academic quarters) of full-time work, although most students choose to complete the program in five academic quarters, or eighteen months, and work as an intern in the Summer Quarter.

---

**Background Requirements**

Students are expected to have completed both MATH 51 Linear Algebra and Differential Calculus of Several Variables, or an equivalent multivariable differential calculus course, and CS 106A Programming Methodology, or an equivalent general programming course, before beginning graduate study. These courses do not count toward degree requirements.

**Degree Requirements**

Students must take a minimum of 45 course units as follows:

- Three core courses (9-12 units)
- A primary or specialized concentration (12-24 units)
- One project course or two integrated project courses (0-8 units)
- Elective courses (1-24 units; see restrictions below)

**Core Courses (three courses required)**

<table>
<thead>
<tr>
<th>Optimization and Analytics (select one)</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MS&amp;E 211 Introduction to Optimization</td>
<td></td>

</tr>
<tr>
<td>MS&amp;E 246 Financial Risk Analytics</td>
</tr>
</tbody>
</table>

**Quantitative Methods (two required):**

| Select one ( whichever wasn’t taken for core): |
| MS&E 211 Introduction to Optimization |
| or MS&E 211X Introduction to Optimization (Accelerated) |
| MS&E 226 "Small" Data |

**Select one:**

| MS&E 223 Simulation |
| MS&E 245B Advanced Investment Science (if not used above) |
| MS&E 246 Financial Risk Analytics (if not used above) |
| MS&E 322 Stochastic Calculus and Control |
| MS&E 349 Financial Statistics |
### Operations and Analytics Concentration (four courses required)

#### Required Courses
- **MS&E 211**: Introduction to Optimization (whichever course wasn't taken for core)
- **MS&E 221**: Stochastic Modeling (or a more advanced course in probability (i.e. MS&E 223 Simulation) if a student has taken an equivalent class in stochastic modeling)
- **MS&E 235**: Network Analytics
- **MS&E 251**: Introduction to Stochastic Control with Applications
- **MS&E 260**: Introduction to Operations Management
- **MS&E 263**: Healthcare Operations Management
- **MS&E 267**: Service Operations and the Design of Marketplaces

#### Recommended Elective Courses:
- **MS&E 212**: Mathematical Programming and Combinatorial Optimization
- **MS&E 223**: Simulation
- **MS&E 225**: Network Analytics
- **MS&E 237**: Networks, Markets, and Crowds
- **MS&E 243**: Energy and Environmental Policy Analysis
- **MS&E 245A**: Investment Science
- **MS&E 250A**: Engineering Risk Analysis
- **MS&E 251**: Introduction to Stochastic Control with Applications
- **MS&E 252**: Decision Analysis I: Foundations of Decision Analysis
- **MS&E 260**: Introduction to Operations Management
- **MS&E 262**: Supply Chain Management
- **MS&E 267**: Service Operations and the Design of Marketplaces
- **MS&E 270**: Strategy in Technology-Based Companies
- **MS&E 292**: Health Policy Modeling

### Technology and Engineering Management Concentration (four courses beyond core required)

The course used to satisfy the Organizations and Decisions Core satisfies one of the areas below, but the course units do not double-count.

#### Organizations and Strategy (select at least one):
- **MS&E 270**: Strategy in Technology-Based Companies
- **MS&E 274**: Dynamic Entrepreneurial Strategy
- **MS&E 278**: Patent Law and Strategy for Innovators and Entrepreneurs
- **MS&E 280**: Organizational Behavior: Evidence in Action
- **MS&E 282**: Transformational Leadership
- **MS&E 284**: Designing Modern Work Organizations

### Entrepreneurship and Innovation (select at least one):
- **MS&E 270**: Strategy in Technology-Based Companies
- **MS&E 271**: Global Entrepreneurial Marketing
- **MS&E 272**: Entrepreneurship without Borders
- **MS&E 273**: Technology Venture Formation
- **MS&E 275**: Foundations for Large-Scale Entrepreneurship
- **MS&E 276**: Entrepreneurial Management and Finance
- **MS&E 277**: Creativity and Innovation
- **ENGR 245**: The Lean LaunchPad: Getting Your Lean Startup Off the Ground

### Finance and Decisions (select at least one):
- **MS&E 240**: Accounting for Managers and Entrepreneurs
- **MS&E 245A**: Investment Science
- **MS&E 245B**: Advanced Investment Science
- **MS&E 246**: Financial Risk Analytics
- **MS&E 250A**: Engineering Risk Analysis
- **MS&E 250B**: Project Course in Engineering Risk Analysis
- **MS&E 252**: Decision Analysis I: Foundations of Decision Analysis
- **MS&E 352**: Decision Analysis II: Professional Decision Analysis

### Specialized Concentrations (must have approval of the academic advisor)

#### Computational Social Science (four courses required)

#### Statistics (select at least one)
- **MS&E 226**: "Small" Data (may not be duplicated in core)
- **STATS 203**: Introduction to Regression Models and Analysis of Variance
- **STATS 305A**: Introduction to Statistical Modeling

#### Networks (select at least one)
- **MS&E 231**: Introduction to Computational Social Science
- **MS&E 235**: Network Analytics
- **CS 246**: Mining Massive Data Sets

#### Social Science (select at least one)
- **MS&E 270**: Strategy in Technology-Based Companies
- **MS&E 280**: Organizational Behavior: Evidence in Action
- **MS&E 284**: Designing Modern Work Organizations
- **ECON 202N**: Microeconomics I For Non-Economics PhDs
- **ECON 203N**: Microeconomics II For Non-Economics PhDs
- **PSYCH 212**: Classic and contemporary social psychology research
- **PSYCH 265**: Social Psychology and Social Change
- **SOC 220**: Interpersonal Relations
- **SOC 224B**: Relational Sociology

**Recommended Elective Courses**
### Decision and Risk Analysis Concentration (four courses required)

**Core Courses are restricted as follows:**
- MS&E 211 Introduction to Optimization
- or MS&E 211X Introduction to Optimization (Accelerated)
- MS&E 221 Stochastic Modeling
- MS&E 252 Decision Analysis I: Foundations of Decision Analysis

**Required Courses (select two):**
- MS&E 241 Economic Analysis
- MS&E 250A Engineering Risk Analysis
- MS&E 352 Decision Analysis II: Professional Decision Analysis

**Policy Course (select one):**
- MS&E 243 Energy and Environmental Policy Analysis
- MS&E 292 Health Policy Modeling
- MS&E 293 Technology and National Security
- MS&E 294 Systems Modeling for Climate Policy Analysis

**Energy Policy Analysis**

**Project Course:**
- MS&E 250B Project Course in Engineering Risk Analysis
- MS&E 297 “Hacking for Defense”: Solving National Security issues with the Lean Launchpad

### Energy and Environment Concentration (six courses required)

**Required Courses:**
- CEE 207A Understanding Energy
- MS&E 241 Economic Analysis
- MS&E 243 Energy and Environmental Policy Analysis

Three additional courses from energy, policy, or strategy areas below.

**Policy:**
- ECON 251 Natural Resource and Energy Economics
- ENERGY 158 Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull
- GSBGEN 336 Energy Markets and Policy
- MS&E 293 Technology and National Security
- MS&E 294 Systems Modeling for Climate Policy Analysis
- MS&E 295 Energy Policy Analysis

**Strategy:**
- ECON 203N Microeconomics II For Non-Economics PhDs
- ENERGY 158 Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull
- GSBGEN 538 Strategy in Technology-Based Companies
- MS&E 271 Global Entrepreneurial Marketing
- MS&E 272 Entrepreneurship without Borders
- MS&E 273 Technology Venture Formation
- MS&E 274 Dynamic Entrepreneurial Strategy
- MS&E 275 Foundations for Large-Scale Entrepreneurship
- MS&E 276 Entrepreneurial Management and Finance
- MS&E 277 Creativity and Innovation
- MS&E 278 Patent Law and Strategy for Innovators and Entrepreneurs

**Energy:**
- ENERGY 102 Fundamentals of Renewable Power
- ENERGY 104 Sustainable Energy for 9 Billion
- ENERGY 158 Bringing New Energy Technologies to Market: Optimizing Technology Push and Market Pull
- ME 370A Energy Systems I: Thermodynamics
- ME 370B Energy Systems II: Modeling and Advanced Concepts
- PHYSICS 240 Introduction to the Physics of Energy
- PHYSICS 241 Introduction to Nuclear Energy

**Recommended Seminars:**
- ECON 341 Public Economics and Environmental Economics Seminar
- ENERGY 301 The Energy Seminar
- MS&E 441 Policy and Economics Research Roundtable
- MS&E 472 Entrepreneurial Thought Leaders’ Seminar

**Recommended Elective Courses:**
- ECON 250 Environmental Economics
- ECON 270 Intermediate Econometrics I
- ECON 278 Behavioral and Experimental Economics I
- MGTECON 603 Econometric Methods I
- MS&E 201 Dynamic Systems
MS&E 211 Introduction to Optimization
MS&E 244 Economic Growth and Development
MS&E 251 Introduction to Stochastic Control with Applications

### Health Systems Modeling Concentration (four courses required)

### Additional Requirements

1. At least 45 units must be in courses numbered 100 and above.
2. The degree program must be completed with a grade point average (GPA) of 3.0 or higher.
3. At least 27 units must be in courses numbered 200 and above in MS&E, taken for a letter grade and a minimum of two units each.
4. At least 36 letter-graded units must be in MS&E or closely related fields. Closely related fields include any department in the School of Engineering, mathematics, statistics, economics, sociology, psychology, or business.
5. All courses used to satisfy core, concentration, or project requirements must be taken for a letter grade.
6. A maximum of three units of 1-unit courses such as seminars, colloquia, workshops, in any department, including MS&E 208A, B, and C, Curricular Practical Training.
7. A maximum of 18 non-degree option (NDO) units through the Stanford Center for Professional Development (SCPD).
8. Courses taken in Health and Human Performance (Athletics, Club Sports, Martial Arts, Outdoor Education, Physical Education, and Wellness Education) may not be applied toward the degree.

### Professional Education

The Stanford Center for Professional Development (SCPD) provides opportunities for employees of some local and remote companies to take courses at Stanford. The Honors Cooperative Program (HCP) provides opportunities for employees of SCPD member companies to earn an M.S. degree, over a longer period, by taking one or two courses per academic quarter. Some courses are only offered on campus; HCP students may attend those courses at Stanford to meet the degree requirements. It is possible to complete this program as a remote HCP student although the remote offerings are limited. Students must apply for a degree program through the standard application process, and must meet the standard application deadlines.

The non-degree option (NDO) allows employees of some local companies to take courses for credit from their company sites before being admitted to a degree program. Students apply to take NDO courses each quarter through the Stanford Center for Professional Development. Up to 18 units taken as an NDO student may be applied toward a degree program. For additional information about the NDO application process and deadlines, see the SCPD web site (http://scpd.stanford.edu), or contact SCPD at (650) 725-3000.

### Certificate

The department offers a certificate program within the framework of the NDO program. A certificate can be obtained by completing three MS&E core courses, plus one MS&E elective course for a total of four courses. For further information, see http://scpd.stanford.edu/scpd/programs/certs/managementSci.htm.
Dual Master's Degree Program
The dual degree program enables a small group of graduate students to obtain two master's degrees simultaneously. Students complete the course requirements for each department. A total of 90 units is required to complete the dual master’s degree.

Admission
For the dual degree, admission to two departments is required, but is coordinated by designated members of both admissions committees who make recommendations to the committees of their respective departments. Students may apply to only one department initially. After the first quarter at Stanford, students may apply to be admitted to the second department.

Advising
Every student in the dual degree program has one adviser in each department.

Joint MS&E and Law Degrees
The School of Law and the Department of Management Science and Engineering offer joint degree programs leading to a J.D. degree and an M.S. degree in MS&E, or to a J.D. and Ph.D. in MS&E. These programs are designed for students who wish to prepare themselves for careers in areas relating to both law and to the decision making, policy making, and problem solving knowledge and skills developed in the MS&E program. Students interested in either joint degree program must apply and gain admission separately to the School of Law and the Department of Management Science and Engineering and, as an additional step, must secure consent from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or MS&E may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or MS&E. Students are assigned to a joint program committee composed of at least one faculty member from Law and one from MS&E. This committee plans the student’s program jointly with the student. Students must be enrolled full time in the Law School for the first year of law studies, and it is recommended that students devote exclusively one Autumn Quarter to the School of Law to initiate their MS&E work. After that time, enrollment may be in MS&E or Law, and students may choose courses from either program regardless of where enrolled. A candidate in the joint J.D./Ph.D. program should spend a substantial amount of full time residency in MS&E. Students must satisfy the requirements for both the J.D. and the M.S. or Ph.D. degrees as specified in this bulletin or by the School of Law. The Law School may approve courses from MS&E or courses in the student’s MS&E program from outside of the Department of Management Science and Engineering that may count toward the J.D. degree, and MS&E may approve courses from the Law School that may count toward the M.S. or Ph.D. degree in MS&E. In either case, approval may consist of a list applicable to all joint degree students or may be tailored to each individual student’s program. The lists may differ depending on whether the student is pursuing an M.S. or a Ph.D. in MS&E.

In the case of a J.D./M.S. program, no more than 45 units of approved courses may be counted toward both degrees. In the case of a J.D./Ph.D. program, no more than 54 units of approved courses may be counted toward both degrees. In either case, no more than 36 units of courses that originate outside the Law School may count toward the law degree. To the extent that courses under this joint degree program originate outside the Law School but count toward the law degree, the law credits permitted under Section 17(1) of the Law School Regulations are reduced on a unit-per-unit basis, but not below zero. The maximum number of law school credits that may be counted toward the M.S. in MS&E is the greater of: (a) 18 units in the case of the M.S., or (b) the maximum number of hours from courses outside the department that an M.S. candidate in MS&E is permitted to count toward the applicable degree under general departmental guidelines or under departmental rules that apply in the case of a particular student.

Tuition and financial aid arrangements are normally through the school in which the student is then enrolled.

Joint MS&E and Master of Public Policy Degree
MS MS&E students who wish to apply their analytical and management skills to the field of public policy can simultaneously pursue a master degree in MS&E and a master degree in Public Policy. The MPP is a two-year degree program, but MS MS&E students who pursue the joint program can earn both degrees in a minimum of two years, depending on prior preparation and elective choices, by counting up to 45 quarter units of course work toward both degrees. After admission to the Department of Management Science and Engineering, incoming or current MS students request that their application file be forwarded to the MPP program director for review.

Students in the joint program normally will spend most of their first year taking MS&E core courses. The second year is typically devoted to the MPP core, concentration, and practicum. The joint degree requires 90 quarter units. Tuition for the first year of study is paid at the Graduate Engineering rate, the remaining time at the graduate rate.

Doctor of Philosophy in Management Science and Engineering
University requirements for the Ph.D. degree are described in the "Graduate Degrees" section of this bulletin.

The Ph.D. degree in MS&E is intended for students primarily interested in a career of research and teaching, or high-level technical work in universities, industry, or government. The program requires three years of full-time graduate study, at least two years of which must be at Stanford. Typically, however, students take four to five years after entering the program to complete all Ph.D. requirements. The Ph.D. is organized around the expectation that the students acquire a certain breadth across all areas of the department, and depth in one of them. The current areas are:

- Computational Social Science
- Decision and Risk Analysis
- Energy and Environmental Policy
- Financial Analytics
- Health Policy
- National Security Policy
- Operations Management
- Optimization and Stochastics
- Organizations
- Strategy, Innovation, and Entrepreneurship

Doctoral students are required to take a number of courses, both to pass a qualifying exam in one of these areas, and to complete a dissertation based on research which must make an original contribution to knowledge.

Each student admitted to the Ph.D. program must satisfy a breadth requirement and pass a qualification procedure. The purpose of the qualification procedure is to assess the student’s command of the
field and to evaluate his or her potential to complete a high-quality dissertation in a timely manner. The student must complete specified course work in one of the areas of the department.

The qualification decision is based on the student's course work and grade point average (GPA), on the one or two preliminary papers prepared by the student with close guidance from two faculty members, at least one of whom must be an MS&E faculty member, the student's performance in an area examination or defense of the written paper(s), and an overall assessment by the faculty of the student's ability to conduct high-quality Ph.D. research. Considering this evidence, the department faculty vote on advancing the student to candidacy in the department at large. The Ph.D. requires a minimum of 135 units, up to 45 units of which may be transferred from another graduate program.

All courses used to satisfy breadth and depth requirements must be taken for a letter grade, if the letter graded option is available. Prior to candidacy, at least 3 units of work must be taken with each of four Stanford faculty members. Finally, the student must pass a University oral examination and complete a Ph.D. dissertation. During the course of the Ph.D. program, students who do not have a master's degree are strongly encouraged to complete one, either in MS&E or in another Stanford department.

**Breadth Requirement**
All first year students are required to attend and participate in MS&E 302 Fundamental Concepts in Management Science and Engineering, which meets in the Autumn Quarter.

Each course session is devoted to a specific MS&E Ph.D. research area. At a given session several advanced P.h.D students in that area make carefully prepared presentations designed for first-year doctoral students regardless of area. The presentations are devoted to: (a) illuminating how people in the area being explored that day think about and approach problems, and (b) illustrating what can and cannot be done when addressing problems by deploying the knowledge, perspectives, and skills acquired by those who specialize in the area in question.

Faculty in the focal area of the week comment on the student presentations. The rest of the session is devoted to questions posed and comments made by the first year Ph.D. students.

During the last two weeks of the quarter, groups of first year students make presentations on how they would approach a problem drawing on two or more of the perspectives to which they have been exposed earlier in the class.

Attendance is mandatory and performance is assessed on the basis of the quality of the students’ presentations and class participation.

**Qualification Procedure Requirements**
The qualification procedure is based on depth in an area of the student’s choice and preparation for dissertation research. The qualification process must be completed by the end of the month of May of the student's second year of graduate study in the department. The performance of all doctoral students is reviewed every year at a department faculty meeting at the end of May or beginning of June. Ph.D. qualification decisions are made at that time and individual feedback is provided.

The Ph.D. qualification requirements comprise these elements:

1. **Courses and GPA:** Students must complete the depth requirements of one of the areas of the MS&E department. (The Ph.D. area course requirements are below).
   All courses used to satisfy depth requirements must be taken for a letter grade, if the letter graded option is available. Course substitutions may be approved by the doctoral program adviser or the MS&E dissertation adviser on the candidacy form or on a request for graduate course waiver/substitution form. A student must maintain a GPA of at least 3.4 in the set of all courses taken by the student within the department. The GPA is computed on the basis of the nominal number of units for which each course is offered.

2. **Paper(s):** A student may choose between two options. The first option involves one paper supervised by a primary faculty adviser and a second faculty reader. This paper should be written in two quarters. The second option involves two shorter sequential tutorials, with two different faculty advisers. Each tutorial should be completed in one quarter. In both options, the student chooses the faculty adviser(s)/reader with the faculty members’ consent. There must be two faculty members, at least one of whom must be an MS&E faculty member, supervising and evaluating this requirement for advancement to candidacy. The paper/tutorials must be completed before the Spring Quarter of the student’s second year of graduate study in the department if the student’s qualifying exam is during the Spring Quarter, and before the end of May of that year otherwise. A student may register for up to 3 units per tutorial and up to 6 units for a paper.

3. **Area Qualification:** In addition, during the second year, a student must pass an examination in one of the areas of the MS&E department, or defense of the written paper(s). The student chooses the area/program in which to take the examination. This area examination is written, oral, or both, at the discretion of the area faculty administering the exam. Most areas offer the qualifying exam only once per year, which may be early in the second year.

**Degree Progress and Student Responsibility**
Each student's progress is reviewed annually by the MS&E faculty. Typically, this occurs at a faculty meeting at the end of Spring Quarter, and email notifications are sent over the summer.

1. **First-year students** should complete 30 units of breadth and depth courses, including MS&E 302, and develop relationships with faculty members who might serve as dissertation adviser and reading committee.

2. **Second-year students** should complete most, if not all, of the required depth courses, work with two faculty members, at least one of whom must be an MS&E faculty member, on tutorials/research paper, and pass an area qualifying exam. Most areas offer the qualifying exam only once per year, which may be early in the second year. Students should continue to develop relationships with faculty members who might serve as dissertation advisers and reading committee, and select a dissertation adviser before the beginning of the third year.

3. **Third-year students** should complete any remaining depth courses, select a dissertation topic, and make progress on the dissertation.

4. **Fourth-year students** should select a reading committee, and complete, or nearly complete, the oral exam and dissertation.

It is the responsibility of the student to initiate each step in completing the Ph.D. program.

It is strongly recommended that each student, in the first year of graduate study at Stanford, make it a special point to become well acquainted with MS&E faculty members and to seek advice and counsel regarding possible Ph.D. candidacy. A faculty member is more likely to accept the responsibility of supervising the research of a student whom he or she knows fairly well than a student whose abilities, initiative, and originality the faculty member knows less.

It is expected that advanced students regularly report to their full reading committee on the progress of their dissertation. It is also expected that the student avail him/herself of the different expertise represented on the committee continually. Each member of this committee must certify approval of both the scope and quality of the dissertation.
The doctoral dissertation reading committee consists of the principal dissertation adviser and two other readers. At least one member must be from the student’s major department.

As administered in this department, the University oral examination is a defense of the dissertation; however, the candidate should be prepared to answer any question raised by any members of the Academic Council who choose to be present. Students should schedule three hours for the oral examination, which usually consists of a 45-minute public presentation, followed by closed-session questioning of the examinee by the committee, and committee deliberation. The University oral examination may be scheduled after the dissertation reading committee has given tentative approval to the dissertation. The student must be enrolled in the quarter of their oral examination.

The examining committee usually consists of the three members of the reading committee as well as a fourth faculty member and an orals chair. It is the responsibility of the student's adviser to find an appropriate orals chair. The chair must be an Academic Council member and may not be affiliated with either the Department of Management Science and Engineering nor any department in which the student’s adviser has a regular appointment. Emeriti professors are eligible to serve as an orals chair. The student needs to reserve a room, and meet with the student services manager to complete the oral examination schedule and pick up other paper work. This paperwork, along with an abstract, needs to be delivered to the orals chair at least one week prior to the oral examination.

**Course Requirements**

**Computational Social Science**
The Computational Social Science track teaches students how to apply rigorous statistical and computational methods to address problems in economics, sociology, political science and beyond. The core course work covers fundamental statistical concepts, large-scale computation, and network analysis. Through electives, students can explore topics such as experimental design, algorithmic economics, and machine learning.

Select at least one class from each of four different core areas.

**Statistics core:**
- MS&E 226 "Small" Data
- STATS 203 Introduction to Regression Models and Analysis of Variance
- STATS 305A Introduction to Statistical Modeling

**Computation core:**
- MS&E 231 Introduction to Computational Social Science
- MS&E 235 Network Analytics
- CS 246 Mining Massive Data Sets

**Networks core:**
- MS&E 233 Networked Markets
- MS&E 334 Topics in Social Data
- CS 224W Analysis of Networks
- ECON 291 Social and Economic Networks

**Social Science core:**
- MS&E 270 Strategy in Technology-Based Companies
- MS&E 280 Organizational Behavior: Evidence in Action
- MS&E 274 Dynamic Entrepreneurial Strategy
- ECON 202N Microeconomics I For Non-Economics PhDs
- ECON 203N Microeconomics II For Non-Economics PhDs
- PSYCH 212 Classic and contemporary social psychology research
- PSYCH 265 Social Psychology and Social Change
- SOC 220 Interpersonal Relations
- SOC 224B Relational Sociology

**Recommended:**
- Causal Inference
  - COMM 382 Research in Computational Social Science
  - POLISCI 355C Causal Inference for Social Science
- Computation
  - CS 147 Introduction to Human-Computer Interaction Design
  - CS 229 Machine Learning
  - CS 448B Data Visualization
  - MS&E 234 Data Privacy and Ethics
- Economics
  - MS&E 241 Economic Analysis
- Natural Language Processing
  - CS 124 From Languages to Information
  - CS 224N Natural Language Processing with Deep Learning
  - CS 224S Spoken Language Processing
  - LINGUIST 278 Programming for Linguists
  - LINGUIST 281 Computational Models of Linguistic Formalism
- Networks
  - OB 622 Topics in Social Network Analysis: Structure and Dynamics
  - SOC 369 Social Network Methods
- Psychology
  - PSYCH 216 Public Policy and Social Psychology: Implications and Applications
  - PSYCH 238 Wise Interventions
- Sociology
  - OB 637 Modeling Culture
  - SOC 214 Economic Sociology
  - SOC 218 Social Movements and Collective Action
  - SOC 262 The Social Regulation of Markets
  - SOC 270 Classics of Modern Social Theory
  - SOC 271 Organizational Analysis
- Statistics
  - STATS 209 Statistical Methods for Group Comparisons and Causal Inference
  - STATS 263 Design of Experiments
  - STATS 315A Modern Applied Statistics: Learning
  - STATS 315B Modern Applied Statistics: Data Mining

Students may substitute other classes (including those from other departments) from the same general area on a case-by-case basis, subject to approval by the student’s program/dissertation adviser. The students must obtain a GPA of 3.50 or better in the core courses to qualify. The core courses must be completed in or before the Spring Quarter of the student’s second year.

**Computational Social Science Qualifying Procedure**
The student does two quarter-length tutorials with CSS faculty. At the end of these tutorials, the student must make a 45-minute presentation of one of their tutorials to a committee of three CSS faculty members. The student can do both tutorials with the same faculty member, in which case the presentation can be of the two tutorials together, and another committee member must be kept informed of the student’s progress on a regular basis during the two quarters. The presentation should take place in the Spring Quarter of the student’s second year, or earlier. The presentation must include original research or promising directions towards original research. During this presentation, the student must also provide the name of their chosen focus area, and the list of courses that the student has completed and intends to complete in
the core as well as in the chosen focus area. The committee then makes a recommendation to the CSS area and the MS&E department regarding qualification of the student for the Ph.D. program in CSS.

Decision Analysis and Risk Analysis

Prerequisites:
- CS 106A Programming Methodology
- CME 100 Vector Calculus for Engineers
- CME 103 Introduction to Matrix Methods

Required:
- MS&E 201 Dynamic Systems
  or EE 263 Introduction to Linear Dynamical Systems
- MS&E 211 Introduction to Optimization
  or MS&E 211X Introduction to Optimization (Accelerated)
- MS&E 311 Optimization
- MS&E 220 Probabilistic Analysis
- MS&E 221 Stochastic Modeling
  or STATS 217 Introduction to Stochastic Processes I
- MS&E 223 Simulation
- MS&E 241 Economic Analysis
- MS&E 250A Engineering Risk Analysis
- MS&E 250B Project Course in Engineering Risk Analysis
- MS&E 251 Introduction to Stochastic Control with Applications
  or MS&E 351 Dynamic Programming and Stochastic Control
- MS&E 252 Decision Analysis I: Foundations of Decision Analysis
- MS&E 255 Decision Analysis II: Professional Decision Analysis
- MS&E 353 Decision Analysis III: Frontiers of Decision Analysis
- MS&E 355 Influence Diagrams and Probabilistics Networks

Recommended:
- MS&E 245A Investment Science
- MS&E 254 The Ethical Analyst
- MS&E 270 Strategy in Technology-Based Companies
- MS&E 280 Organizational Behavior: Evidence in Action
- MS&E 299 Voluntary Social Systems
- MS&E 321 Stochastic Systems
  or STATS 218 Introduction to Stochastic Processes II
- CS 228 Probabilistic Graphical Models: Principles and Techniques
- CS 270 Modeling Biomedical Systems: Ontology, Terminology, Problem Solving
- ECON 286 Game Theory and Economic Applications
- ECON 290 Multyperson Decision Theory
- MGTECON 332
- STATS 200 Introduction to Statistical Inference
  or STATS 201 Design and Analysis of Experiments
  or STATS 202 Data Mining and Analysis
  or ECON 271 Intermediate Econometrics II

Finance

The finance area focuses on the quantitative and statistical study of financial risks, institutions, markets, and technology. Students take courses in probability, statistics, optimization, finance, economics, and computational mathematics as well as a variety of other courses. Recent dissertation topics include studies of machine learning methods for risk management; systemic financial risk; algorithmic trading; optimal order execution; large-scale portfolio optimization; mortgage markets; and statistical testing of financial models. PhD students in the area typically are affiliated with the Center for Financial and Risk Analytics (CFRA).

Prerequisites (may be waived based on prior coursework)

Mathematics
- MATH 113 Linear Algebra and Matrix Theory
- MATH 115 Functions of a Real Variable
  or MATH 171 Fundamental Concepts of Analysis

Probability
- MS&E 220 Probabilistic Analysis
- or STATS 116 Theory of Probability
- MS&E 221 Stochastic Modeling

Statistics
- STATS 110 Statistical Methods in Engineering and the Physical Sciences

Programming
- CS 106A Programming Methodology

Economics
- MS&E 241 Economic Analysis
  or ECON 50 Economic Analysis I

Required Core Courses

Optimization
- MS&E 211 Introduction to Optimization
  or MS&E 211X Introduction to Optimization (Accelerated)
  or MS&E 310 Linear Programming
  or MS&E 311 Optimization

Stochastics
- MS&E 321 Stochastic Systems
  or MS&E 322 Stochastic Calculus and Control

Statistics
- STATS 200 Introduction to Statistical Inference
  or STATS 305A Introduction to Statistical Modeling
  or STATS 315A Modern Applied Statistics: Learning

Numerical Methods
- MS&E 223 Simulation
  or CME 200 Linear Algebra with Application to Engineering Computations
  or CME 206 Introduction to Numerical Methods for Engineering

Strongly Recommended
- STATS 300A Theory of Statistics I
- STATS 310A Theory of Probability I

Elective Courses (select at least 4)
- MS&E 245A Investment Science
- MS&E 245B Advanced Investment Science
- MS&E 246 Financial Risk Analytics
- MS&E 347 Credit Risk: Modeling and Management
- MS&E 348 Optimization of Uncertainty and Applications in Finance
- MS&E 349 Financial Statistics
- ECON 236 Financial Economics I
- ECON 237 Financial Economics II
- ECON 273 Advanced Econometrics I
- ECON 274 Advanced Econometrics II
- ECON 276 Computational Econometrics
- FINANCE 622 Dynamic Asset Pricing Theory
- FINANCE 625 Empirical Asset Pricing
- FINANCE 632 Empirical Dynamic Asset Pricing
- MATH 238 Mathematical Finance
Qualification. The tutorials emphasize basic research skills. The oral examination emphasizes command of basic concepts as represented in the required courses as well as the modeling of practical situations.

Energy and Environment Policy (see Policy and Strategy)

Health Policy (see Policy and Strategy)

National Security Policy (see Decision and Risk Analysis)

Operations Management

Foundation courses (may be waived based on prior coursework):
- MS&E 211 Introduction to Optimization
- or MS&E 211X Introduction to Optimization (Accelerated)
- MS&E 241 Economic Analysis
- or ECON 202N Microeconomics I For Non-Economics PhDs
- MS&E 260 Introduction to Operations Management

Methodology courses (all):
- MS&E 221 Stochastic Modeling
- or STATS 217 Introduction to Stochastic Processes I
- MS&E 223 Simulation
- or STATS 362 Topic: Monte Carlo
- MS&E 251 Introduction to Stochastic Control with Applications
- or MS&E 351 Dynamic Programming and Stochastic Control
- MS&E 311 Optimization
- or EE 364A Convex Optimization I
- MS&E 321 Stochastic Systems
- MS&E 335 Queueing and Scheduling in Processing Networks
- ECON 203N Microeconomics II For Non-Economics PhDs

OM research courses (any four):
- MS&E 336 Platform and Marketplace Design
- MS&E 365 Advanced Topics in Market Design
- Faculty-approved GSB OIT Ph.D. courses (about six are offered every two years).

Optimization and Stochastics

Prerequisites:
- MS&E 220 Probabilistic Analysis
- or STATS 116 Theory of Probability
- MS&E 221 Stochastic Modeling
- or STATS 217 Introduction to Stochastic Processes I
- MS&E 241 Economic Analysis
- or ECON 50 Economic Analysis I
- CS 106A Programming Methodology
- or CS 106X Programming Abstractions (Accelerated)
- MATH 113 Linear Algebra and Matrix Theory
- MATH 115 Functions of a Real Variable
- or MATH 171 Fundamental Concepts of Analysis

Strongly Recommended:
- CME 108 Introduction to Scientific Computing
- STATS 200 Introduction to Statistical Inference
- STATS 203 Introduction to Regression Models and Analysis of Variance

Core (four courses):
- MS&E 310 Linear Programming
- MS&E 321 Stochastic Systems
- Two of the following three courses:
  - MS&E 311 Optimization
  - MS&E 316 Discrete Mathematics and Algorithms
  - STATS 310A Theory of Probability I

Three to four courses in some coherent area of specialization.

In addition to the four core courses, students should take at least four 3-4 unit courses in some coherent area of specialization. The area of specialization may be methodological; examples include (but are not limited to) optimization, stochastic systems, stochastic control, algorithms, economic analysis, statistical inference, scientific computing, etc. The area of specialization could also have a significant modeling and application component, such as (but not limited to) information services, telecommunications, financial engineering, supply chains, health care, energy, etc. Independent of the choice of specialization, students are encouraged to take a range of courses covering methodology, modeling, and applications. Any MS&E courses satisfying this requirement must be at the 300-level, while courses outside MS&E must be at a comparable level. Students are expected to earn a letter grade of A- or better in all courses counted for the requirements. A student’s plan for completing these requirements must be discussed with and approved by their faculty adviser by the beginning of Autumn Quarter of their second year.

Optimization and Stochastics Qualifying Procedure

Students take the area qualifying exam at the beginning of their second year of study. The qualifying exam consists of two written exams: one in Optimization and one in Stochastic Systems. The first exam covers the material in MS&E 310 and related prerequisites. The second exam covers the material in MS&E 321 and related prerequisites.

The student does two quarter-length tutorials with Optimization and Stochastics faculty (or affiliated faculty). A written report approved by the supervising faculty member is required on each tutorial. In addition, at the end of the second year, students are expected to make a 30-minute presentation to the broader Optimization and Stochastics faculty. The presentation must include original research or promising directions towards original research. The student can do both tutorials with the same faculty member; in this case a single written report is sufficient, and the presentation can be of the two tutorials together.

Organizations, Strategy, Innovation, and Entrepreneurship

Foundation in Organizational Behavior (five courses):
- OB 671 Social Psychology of Organizations
- SOC 363A Seminar on Organizational Theory
- or OB 672 Organization and Environment

Plus three of the following, which must include at least one 37x course and one 38x course:
- MS&E 371 Innovation and Strategic Change
- MS&E 372 Entrepreneurship Doctoral Research Seminar
- MS&E 376 Strategy Doctoral Research Seminar
- MS&E 380 Doctoral Research Seminar in Organizations
- MS&E 384 Groups and Teams
- MS&E 387 Design of Field Research Methods
- MS&E 388 Contemporary Themes in Work and Organization Studies
In their first two years in the Ph.D. program, all students are expected to work with faculty on research. To ensure an early start, all students must work at least 25% of their time in their first year as a research assistant with a faculty member. Students on fellowships can earn course credit for the work. With approval from the students’ adviser, one quarter of the requirement may be fulfilled by working as a Course Assistant (CA).

Ph.D. students in organizational behavior must take 3 courses in statistics and research methods. Two of these courses must be statistics courses.

Ph.D. students are required to take a minimum of 2 advanced-content courses chosen with input from their adviser.

Students are expected to complete a yearly plan, of no more than two typed pages in length, detailing the student’s plans for the next year in terms of education (e.g., courses and seminars), research (e.g., RAships), and teaching (e.g., TAships). This plan should be provided to the students’ academic adviser for review no later than May 15 each calendar year.

**Policy and Strategy**

The Policy and Strategy (P&S) Area addresses policy and strategy questions in a variety of organizational and societal settings. In order to approach interdisciplinary research questions in application domains as diverse as energy, environment, health, information technology, innovation, and government regulation, P&S faculty members rely on a broad range of analytical and empirical tools, such as decision analysis, optimization and operations research methods, formal economic modeling, econometrics, case studies, and simulation. After having been exposed to foundational knowledge of economics, strategy, and organizational theory, doctoral students in the P&S Area can select from a variety of courses to deepen their understanding of the specific application domains. The P&S Area’s mission is to provide a first-class learning and research environment preparing doctoral students for careers at research universities, government institutions, and in the private sector.

**Foundation in Policy and Strategy (three):**

Students are expected to complete a yearly plan, of no more than two typed pages in length, detailing the student’s plans for the next year in terms of education (e.g., courses and seminars), research (e.g., RAships), and teaching (e.g., TAships). This plan should be provided to the students’ academic adviser for review no later than May 15 each calendar year.

Policy and Strategy Qualifying Procedure
Advancement to Ph.D. candidacy is determined at the end of the student’s second year of studies, based on the following three components:

1. the student’s overall grade point average in the program (a GPA of 3.5 or higher is required);
2. a second-year research paper that is written by the student under the supervision of a faculty member, and that is presented to examining faculty members in the second year;
3. a written and an oral qualifying examination taken by the student in the spring quarter of the second year.

Ph.D. Minor in Management Science and Engineering
Students pursuing a Ph.D. in another department who wish to receive a Ph.D. minor in Management Science and Engineering should consult the MS&E student services office. A minor in MS&E may be obtained by completing 20 units of approved graduate-level MS&E courses, of which at least 6 units must be at the 300-level. Courses approved for the minor must form a coherent program, and include a breadth of courses from across the department. The program must include a minimum of 16 letter-graded units, and a minimum grade point average of 3.3 must be achieved in these courses.

Chair: Nicholas Bambos

Associate Professors: Jose Blanchet, Samuel S. Chiu, Charles E. Eesley, Kay Giesecke, Ramesh Johari, Amin Saberi, Ross D. Shachter, Edison T. S. Tse

Assistant Professors: Itai Ashlagi, Sharad Goel, Markus Pelger, Aaron Sidford, Johan Ugander, Melissa A. Valentine

Professors (Research): John P. Weyant

Professors (Teaching): Thomas H. Byers, Robert E. McGinn

Professor of the Practice: Tina L. Seelig

Courtesy Professors: Stephen P. Boyd, Douglas K. Owens, Walter Powell, Balaji Prabhakar, Alvin Roth, Tim Roughgarden
MATERIALS SCIENCE AND ENGINEERING

Courses offered by the Department of Materials Science and Engineering are listed under the subject code MATSCI on the Stanford Bulletin’s ExploreCourses (http://explorecourses.stanford.edu/browse) web site.

The Department of Materials Science and Engineering is concerned with the relation between the structure and properties of materials, factors that control the internal structure of solids, and processes for altering their structure and properties, particularly at the nanoscale.

Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students’ knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminous degree program which leads to an M.S. in Materials Science and Engineering. Coterminous degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

Graduate Programs in Materials Science Engineering

Graduate programs lead to the degrees of Master of Science, Engineer, and Doctor of Philosophy. Graduate students can specialize in any of the areas of materials science and engineering.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course and laboratory work in solid state fundamentals and materials engineering, and further course work in a technical depth area which may include a master’s Research Report. Typical depth areas include nanocharacterization, electronic and photonic materials, energy materials, nano and biomaterials.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Materials Science and Engineering and related fields.

Facilities

The department is located in the William F. Durand Building, with extensive facilities in the Jack A. McCullough Building and the Gordon and Betty Moore Materials Research Building. These buildings house offices for the chair, majority of the faculty, administrative and technical staff, graduate students as well as lecture and seminar rooms. The research facilities are equipped to conduct electrical measurements, mechanical testing of bulk and thin film materials, fracture and fatigue of advanced materials, metallography, optical, scanning, transmission electron microscopy, atomic force microscopy, UHV sputter deposition, vacuum annealing treatments, wet chemistry, and x-ray diffraction.

The McCullough/Moore Complex is also the home for the Center for Magnetic Nanotechnology (CMN (http://www.stanford.edu/group/nanomag_center)), Stanford Nanocharacterization Laboratory (SNL (http://www.stanford.edu/group/snl)) and Nanoscale Prototyping Laboratory (NPL (http://npl-web.stanford.edu); joint facility with Mechanical Engineering in Building 530). The department maintains a microcomputer cluster for its students, which is linked to the internet.

Depending on the needs of their programs, students and faculty also conduct research in a number of other departments and independent laboratories. Chief among these are the Stanford Nanofabrication Facility (SNF (http://snf.stanford.edu)), Geballe Laboratory for Advanced Materials (GLAM (http://www.stanford.edu/group/glam)), and Stanford Synchrotron Radiation Laboratory (SSRL (http://www-ssrl.slac.stanford.edu)).

The Stanford Nanofabrication Facility (SNF) is a laboratory joining government and industrially funded research on microelectronic materials, devices, and systems. It houses a 10,000 sq. ft., class 100 clean room for Si and GaAs integrated circuit fabrication, a large number of electronic test, materials analysis, and computer facilities, and office space for faculty, staff, and students. In addition, the Center for Integrated Systems (CIS (http://cis.stanford.edu)) provides start-up research funds and maintains a fellow-mentor program with industry.

Bachelor of Science in Materials Science and Engineering

Mission Statement

The mission of the Materials Science and Engineering Program is to provide students with a strong foundation in materials science and engineering. The program’s curriculum places special emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of materials structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students’ knowledge of modern materials science and engineering and teach them to apply this knowledge analytically to create effective and novel solutions to practical problems. The program prepares students for careers in industry or for further study in graduate school.

The undergraduate program provides training in solid state fundamentals and materials engineering. Students desiring to specialize in this field during their undergraduate period may do so by following the curriculum outlined in the Bachelor of Science in Materials Science and Engineering section of this bulletin as well as the School of Engineering Undergraduate Handbook (http://www.stanford.edu/group/ughb/cgi-bin/handbook/index.php/Main_Page). The University’s basic requirements for the bachelor’s degree are discussed in the Bachelor of Science in Materials Science and Engineering section of this bulletin. Electives are available so that students with broad interests can combine materials science and engineering with work in another science or engineering department.

Students interested in the minor should see the Materials Science and Engineering Minor section of this bulletin.
Materials Science and Engineering (MATSCI)

Completion of the undergraduate program in Materials Science and Engineering leads to the conferment of the Bachelor of Science in Materials Science and Engineering.

Mission of the Undergraduate Program in Materials Science and Engineering

The mission of the undergraduate program in Materials Science and Engineering is to provide students with a strong foundation in materials science and engineering with emphasis on the fundamental scientific and engineering principles which underlie the knowledge and implementation of material structure, processing, properties, and performance of all classes of materials used in engineering systems. Courses in the program develop students’ knowledge of modern materials science and engineering, teach them to apply this knowledge analytically to create effective and novel solutions to practical problems, and develop their communication skills and ability to work collaboratively. The program prepares students for careers in industry and for further study in graduate school.

The B.S. in Materials Science and Engineering provides training for the materials engineer and also preparatory training for graduate work in materials science. Capable undergraduates are encouraged to take at least one year of graduate study to extend their course work through the coterminal degree program which leads to an M.S. in Materials Science and Engineering. Coterminal degree programs are encouraged both for undergraduate majors in Materials Science and Engineering and for undergraduate majors in related disciplines.

Stanford University
Materials Science and Engineering

Degree requirements are as follows:

- Stanford Materials Science undergraduates who are pursuing or who plan to pursue a Coterminal M.S. degree may have more flexibility in their academic quarter prior to the quarter of expected degree conferral. Stanford Materials Science undergraduates who are pursuing or who plan to pursue a Coterminal M.S. degree may have more flexibility in their academic quarter prior to the quarter of expected degree conferral.

- Stanford Materials Science undergraduates who are pursuing or who plan to pursue a Coterminal M.S. degree may have more flexibility in their academic quarter prior to the quarter of expected degree conferral.

Select three of the following core courses:

- MATSCI 190 Organic and Biological Materials
- MATSCI 192 Materials Chemistry
- MATSCI 193 Atomic Arrangements in Solids
- MATSCI 194 Thermodynamics and Phase Equilibria
- MATSCI 195 Waves and Diffraction in Solids
- MATSCI 196 Defects in Crystalline Solids
- MATSCI 197 Rate Processes in Materials
- MATSCI 198 Mechanical Properties of Materials
- MATSCI 199 Electronic and Optical Properties of Solids

Total core course units 9

Select three of the following lab courses:

- MATSCI 171 Energy Materials Laboratory
- MATSCI 172 X-Ray Diffraction Laboratory
- MATSCI 173 Mechanical Behavior Laboratory
- MATSCI 174 Electronic and Photonic Materials and Devices Laboratory
- MATSCI 175 Nanoscale Materials Physics Computation Laboratory

One laboratory requirement may be fulfilled by taking lab courses from another engineering department.

Total lab course units 9

TOTAL 18

b. four classes from MATSCI 201-210 core courses and two MATSCI 171, 172, 173, 174, 175 laboratory courses. One laboratory requirement may be fulfilled by taking a lab course from another engineering department.

Select four of the following core courses:

- MATSCI 202 Materials Chemistry
- MATSCI 203 Atomic Arrangements in Solids
- MATSCI 204 Thermodynamics and Phase Equilibria
- MATSCI 205 Waves and Diffraction in Solids
- MATSCI 206 Defects in Crystalline Solids
- MATSCI 207 Rate Processes in Materials
- MATSCI 208 Mechanical Properties of Materials
- MATSCI 209 Electronic and Optical Properties of Solids
- MATSCI 210 Organic and Biological Materials

Total core course units 12

Select two of the following lab courses:

- MATSCI 171 Energy Materials Laboratory
- MATSCI 172 X-Ray Diffraction Laboratory
- MATSCI 173 Mechanical Behavior Laboratory
- MATSCI 174 Electronic and Photonic Materials and Devices Laboratory
- MATSCI 175 Nanoscale Materials Physics Computation Laboratory

One laboratory requirement may be fulfilled by taking lab courses from another engineering department.

Total lab course units 6

TOTAL 18

3. 15 units of approved course electives to result in a technically cohesive program. Of the 15 units of elective courses:

- a maximum of three units may be seminars.
- c. if writing a master’s thesis report, a minimum of 6 and a maximum of 15 units of MATSCI 200 Master’s Research may be
counted. Master's research units may be counted only if writing a M.S. thesis report. The final version of the thesis report must be signed off by two faculty and submitted to student services manager by last day of classes of the graduation quarter. See student services manager for details and approval.

- d. a maximum of three units may be undergraduate units, but not courses below the 100 level offering.
- e. a maximum of five units may be used for a foreign language course (not including any remedial English or courses in the student's native language if other than English). Students must plan to enroll in an upper level designation of a foreign language course offering.
- f. the combination of seminar, undergraduate, and language units may not exceed six units total.
- g. the combination of research, seminar, undergraduate, and language units may not exceed 15 units total.
- h. activity units may not be counted toward M.S. degree.

4. A minimum grade point average (GPA) of 2.75 for degree course work.

All proposed degree programs are subject to approval by student’s academic adviser, and department’s student services manager, who has responsibility for assuring that each proposal is a technically cohesive program. The M.S. degree is expected to be completed within two years during the University’s candidacy period for completion of a master’s degree.

Master’s Thesis Report

Students wishing to take this option must consult with a MATSCI faculty member initially. Out of the 45 units M.S. degree requirements, 6-15 units may be taken in Materials Science Master’s research by enrolling in MATSCI 200. Students using 15 units of research toward the degree must participate in a more complex and demanding research project than those using lesser units.

The M.S. thesis report must be approved and signed off by two faculty members. In general, one is student’s research adviser, if adviser is a non-MATSCI faculty member, a second MATSCI faculty is required to sign off on the thesis report. Consult with student services manager about faculty criteria, and requirements. Three copies of M.S. thesis report in final format should be submitted to two faculty advisers, and the department. The report is not an official University thesis but is intended to demonstrate to the department and faculty student’s ability to conduct and report a directed research.

As a general guide line, a 6-9 units of master’s research is a normal load for most students. The report should reflect the number of units taken. For instance, 3-4 laboratory reports are required for a 3-unit laboratory course. Accordingly, the level expected for 9 units of research would be at least equivalent to three such courses.

Students are advised to submit their thesis draft to faculty adviser readers by the end of fifth week of the quarter in which the units are to be assigned to allow time for faculty comments and revisions. A collated final version of the thesis report should be submitted to faculty and student services manager by last day of classes of student’s graduation quarter. The appropriate grade for satisfactory progress in the research project prior to submission of the final report is ‘N’ (continuing); the ‘S’ (Satisfactory) final grade is given only when the report is fully approved and signed off by both faculty members.

In cases where students decide to pursue research after the initial program submission deadline, they should submit a revised M.S. Program Proposal at least two quarters before the degree is granted. The total combined units of Materials Science research units, seminars, language courses, and undergraduate courses cannot exceed 15. If a master’s thesis report is not submitted, units in MATSCI 200 Master's Research cannot be applied to the department’s requirement of 45 units for the conferral of the master’s degree.

Honors Cooperative Program

Some of the department’s graduate students participate in the Honors Cooperative Program (HCP), which makes it possible for academically qualified engineers and scientists in industry to be part-time graduate students in Materials Science while continuing professional employment. Prospective HCP students follow the same admissions process and must meet the same admissions requirements as full-time graduate students. For information regarding the Honors Cooperative Program, see Graduate Programs in the "School of Engineering (p. 198)” section of this bulletin.

Petition Process for Transfer from M.S. to Ph.D. Degree Program

Students admitted to graduate programs are admitted specifically into either the terminal M.S. or the Ph.D. program. A student admitted to the terminal M.S. program should not assume admission to the Ph.D. program. Admission to the Ph.D. program is required for a student to be eligible to work towards the Ph.D. degree.

A student in the terminal M.S. program may petition to be admitted to the Ph.D. program by filing an M.S. to Ph.D petition form. Petition must include a one-page statement of purpose explaining why the student wishes to transfer to the Ph.D. program, most recent unofficial transcript, and two letters of recommendation from members of the Stanford faculty, including one from the student’s prospective research adviser and at least one from a Materials Science faculty member belonging to the Academic Council. The M.S. to Ph.D. petition to transfer should be submitted to the student services manager by June of the first year in the M.S. program. Students who wish to submit a petition to the Ph.D. degree, should plan to complete at least six of the MATSCI 200 series (including MATSCI 203 Atomic Arrangements in Solids, MATSCI 204 Thermodynamics and Phase Equilibria, MATSCI 207 Rate Processes in Materials) core courses during their first year of admission. A grade point average (GPA) of 3.5 or better in the core courses is requirement.

Transferring to the Ph.D. program is a competitive process and only highly qualified M.S. students may be admitted. Student’s original application to the graduate program as well as the materials provided for the transfer petition are reviewed. Students must adhere to requirements for the terminal M.S. degree, and plan to confer the M.S. degree in the event that the Ph.D. petition to transfer is not approved.

Coterminal Master of Science Program in Materials Science and Engineering

Stanford undergraduates who wish to continue their studies for the Master of Science degree in Materials Science and Engineering through the Coterminal program may apply for admission after they have earned 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript. Applicants must submit their application no later than eight weeks before the start of the proposed admit quarter. The application must give evidence that student possesses a potential for strong academic performance at the graduate level. Scores from the Graduate Record Examination (GRE) General Test must be reported before action can be taken on an application.

Materials science is a highly integrated and interdisciplinary subject, therefore students of any engineering or science undergraduate major are encouraged to apply.

Information and other requirements pertaining to the Coterminal program in Materials Science and Engineering may be obtained from the department’s student services manager.
University Coterminal Requirements
Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the “Coterminal Master’s Program (p. 46)” section. University requirements for the master’s degree are described in the “Graduate Degrees (p. 50)” section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first quarter graduate is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Engineer in Materials Science Engineering
The University’s basic requirements for the degree of Engineer are outlined in the “Graduate Degrees” section of this bulletin.

A student wishing to enter the Engineer program must have completed the requirements of the M.S. in Materials Science and Engineering, and must file a petition requesting admission to the program, stating the type of research to be done and the proposed supervising professor. Once approved, the Application for Candidacy must be submitted to the department’s student services manager by the end of the second quarter in the Engineer program. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to degree conferral.

The 90-unit program must include 9 units of graduate courses in Materials Science with a MATSCI subject code (no research units, seminars, colloquia, and MATSCI 400 Participation in Materials Science Teaching. Participation in Teaching) beyond the requirements for the M.S. degree, and additional research or other units to meet the 90-unit University minimum requirement. A grade point average (GPA) of 3.0 must be maintained for all degree course work taken at Stanford.

The Engineer thesis must be approved and signed off by two Academic Council faculty members, one must be a MATSCI faculty member.

Doctor of Philosophy in Materials Science Engineering
The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees (p. 50)” section of this bulletin.

The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements. Degree requirements for the department are as follows:

Research & Electives
75 Units of MATSCI 300: Ph.D. Research
12 Units of Electives 4

1 At least six of these courses must be taken during the first year (including MATSCI 203 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/ Atomic Arrangements in Solids), MATSCI 204 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/ Thermodynamics and Phase Equilibria) and MATSCI 207 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/ Rate Processes in Materials). All core courses must be completed for a letter grade, and taken during the first two years in the program.

2 Elective technical courses must be in areas related directly to student’s research interest in Materials Science and Engineering. May include other engineering courses, or MATSCI 400 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/ Participation in Materials Science Teaching. All courses must be completed for a letter grade.

3 Materials Science & Engineering Ph.D. students are required to take MATSCI 230 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/ Practical Training, MATSCI 300 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/) participation in Materials Science Teaching or a maximum of 3 units MATSCI 299 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/) Practical Training.

4 May include other engineering courses, or MATSCI 400 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/) participation in Materials Science Teaching or a maximum of 3 units MATSCI 299 (http://exploredegrees.stanford.edu/schoolofengineering/materialsscienceandengineering/) Practical Training.

- Students must consult with their academic adviser on Ph.D. course selection planning. For students with a non-MATSCI research adviser, the MATSCI academic/co-adviser must also approve the list of proposed courses. Any proposed deviations from the requirements can only be considered by petition.
- Ph.D. students are required to apply for and have conferred a MATSCI M.S. degree normally by the end of their third year of studies. A Graduate Program Authorization Petition (in Axess) and an M.S. Proposal Program (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/progpropma.pdf) must be submitted after taking the Ph.D. qualifying examination.
- A departmental oral qualifying examination must be passed by the end of January of the second year. A grade point average (GPA) of 3.5 in core courses MATSCI 201-210 is required for admission to
the Ph.D. qualifying examination. Students who have passed the Ph.D. qualifying examination are required to complete the Application for Candidacy to the Ph.D. degree by June of the second year after passing the qualifying examination. Final changes in the Application for Candidacy form must be submitted no later than one academic quarter prior to the TGR status.

- Maintain a cumulative GPA of 3.0 in all courses taken at Stanford.
- Students must present the results of their research dissertation at the University Ph.D. oral defense examination.
- Current students subject to either this set of requirements or a prior set must obtain the approval of their adviser before filing a revised program sheet, and should as far as possible adhere to the intent of the new requirements.
- Students may refer the list of "Advanced Specialty Courses and Cognate Courses" provided below as guidelines for their selection of technical elective units. As noted above, academic adviser approval is required.

- At least 90 units must be taken in residence at Stanford. Students entering with an M.S. degree in Materials Science from another university may request to transfer up to 45 units of equivalent work toward the total of 135 Ph.D. degree requirement units.

- Students may propose a petition for exemption from a required core course if they have taken a similar course in the past. To petition, a student must consult and obtain academic and/or research adviser approval, and consent of the instructor of the proposed core course. To assess a student’s level of knowledge, the instructor may provide an oral or written examination on the subject matter. The student must pass the examination in order to be exempt from core course requirement. If the petition is approved, the student is required to complete the waived number of units by taking other relevant upper level MATSCI courses.

### Ph.D. Minor in Materials Science and Engineering

The University’s basic requirements for the Ph.D. minor are outlined in the "Graduate Degrees (p. 52)" section of this bulletin. A minor requires 20 units of graduate work of quality and depth at the 200-level or higher in the Materials Science and Engineering course offering. Courses must be taken for a letter grade. The proposed list of courses must be approved by department’s advanced degree committee. Individual programs must be submitted to the student services manager at least one quarter prior to the quarter of the degree conferral. None of the units taken for the Ph.D. minor may overlap with any M.S. degree units.

Chair: Paul C. McIntyre (http://engineering.stanford.edu/profile/bobsinc)
Associate Chair: Shan Xiang Wang (http://engineering.stanford.edu/profile/rhd)

Professors Emeriti: (Professors)

MECHANICAL ENGINEERING

Courses offered by the Department of Mechanical Engineering are listed under the subject code ME on the Stanford Bulletin’s ExploreCourses web site.

The programs in the Department of Mechanical Engineering (ME) emphasize a mix of applied mechanics, biomechanical engineering, computer simulations, design, and energy science and technology. Since mechanical engineering is a broad discipline, the undergraduate program can be a springboard for graduate study in business, law, medicine, political science, and other professions where understanding technology is important. Both undergraduate and graduate programs provide technical background for work in biomechanical engineering, environmental pollution control, ocean engineering, transportation, and other multidisciplinary problems that concern society. In all programs, emphasis is placed on developing systematic procedures for analysis, communication of work and ideas, practical and aesthetic aspects in design, and responsible use of technology.

Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of intellectual and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide array of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro-mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or another field where a broad engineering background is useful.

Learning Objectives (Undergraduate)

These outcomes are operationalized through learning objectives, which students are expected to demonstrate:

1. Graduates of the program will have the scientific and technical background for successful careers in diverse organizations.
2. Graduates of the program will be leaders, and effective communicators, both in the profession and in the community.
3. Graduates of the program will be motivated and equipped to successfully pursue postgraduate study whether in engineering, or in other fields.
4. Graduates of the program will have a professional and ethical approach to their careers with a strong awareness of the social contexts in which they work.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes:

1. an ability to apply knowledge of science, engineering and mathematics including multivariate calculus and differential equations.
2. an ability to design and conduct experiments, as well as to analyze and interpret data
3. an ability to design a system, component, or process to meet desired needs within realistic constraints
4. an ability to identify, formulate, and solve engineering problems
5. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
6. professional level design experience in both thermal and mechanical systems including the design and realization of either type of system
7. an ability to function on multidisciplinary teams
8. an understanding of professional and ethical responsibility
9. an ability to communicate effectively
10. an ability to understand the impact of engineering solutions in a global and societal context
11. a recognition of the need for, and an ability to engage in life-long learning
12. a broad education that includes knowledge of contemporary issues and awareness of global, economic, environmental and societal context.

Learning Outcomes (Graduate)

The purpose of the master’s program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through course work providing depth in one area of specialization and breadth in complementary areas. Areas of specialization range from automatic controls, energy systems, fluid mechanics, heat transfer, and solid mechanics to biomechanical engineering, MEMS, and design.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through course work and guided research, the program prepares students to make original contributions in Mechanical Engineering and related fields.

Graduate Programs in Mechanical Engineering

Admission and Financial Assistance

Mechanical engineering is a varied profession, ranging from primarily aesthetic aspects of design to highly technical scientific research. Disciplinary areas of interest to mechanical engineers include biomechanics, energy conversion, fluid mechanics, materials, nuclear reactor engineering, propulsion, rigid and elastic body mechanics, systems engineering, scientific computing, thermodynamics, robotics, and controls, to name a few. Our graduate programs provide advanced depth and breadth in the field.

Graduate degree programs and admission

• Master of Science (M.S.) in Engineering
• Master of Science (M.S.) in Engineering — Design Impact
• Doctor of Philosophy (Ph.D.) in Mechanical Engineering

To be eligible for admission to graduate study to the department, a student must have a B.S. degree in engineering, physics, or a comparable science program. M.S. and Ph.D. applications must be received by the first Tuesday in December, and admitted students must matriculate in the following Autumn. In rare circumstances, with the support of an ME faculty member who is a potential Ph.D. adviser, Ph.D. applications from students who have completed or are currently in an M.S. program are reviewed for Winter or Spring Quarter start. In addition, M.S. applicants eligible for the Honors Cooperative Program (on-campus courses required for Mechanical Engineering) can apply in Autumn, Winter, or Spring quarters.

Additional degree programs available to currently enrolled students

• Master of Science (M.S.) in Engineering — Biomechanical Engineering
• Master of Science (M.S.) in Engineering — Individually Designed Major
• Engineer in Mechanical Engineering

For additional information about these programs, see the Mechanical Engineering Department Graduate Handbook.

Financial Assistance
The department annually awards, on a competitive basis, a limited number of fellowships, teaching assistantships, and research assistantships to incoming graduate students. For M.S. students, limited financial aid in the form of fellowships and short-term research assistantships are provided at the time of admission, and course assistantships can sometimes be arranged with individual course instructors after admission. All Ph.D. students receive financial support for the duration of their program, given satisfactory degree progress.

Post-Master’s Degree Programs
The department offers two post-master’s degrees: Engineer and Doctor of Philosophy. Post-master’s research generally requires some evidence that a student has research potential before a faculty member agrees to supervision and a research assistantship appointment. It is most efficient to carry out preliminary research during the M.S. degree program, if interested in a post-master’s degree.

Departmental Groups
The department has five groups: Biomechanical Engineering; Design; Flow Physics and Computation; Mechanics and Computation; and Thermosciences. Each maintains its own labs, shops, and offices.

The Biomechanical Engineering (BME) Group has teaching and research activities which focus primarily on musculoskeletal biomechanics, neuromuscular biomechanics, cardiovascular biomechanics, and rehabilitation engineering. Research in other areas including hearing, ocean, plant, and vision biomechanics exists in collaboration with associated faculty in biology, engineering, and medicine. The group has strong research interactions with the Mechanics and Computation and the Design groups, and the departments of Neurology, Radiology, and Surgery in the School of Medicine.

The Design Group is devoted to the imaginative application of science, technology, and art to the conception, visualization, creation, analysis and realization of useful devices, products, and objects. Courses and research focus on topics such as kinematics, applied finite elements, microprocessors, medical devices, fatigue and fracture mechanics, dynamics and simulation, micro-electromechanical systems (MEMS), rehabilitation, optimization, high-speed devices, product design, vehicle dynamics, experimental mechanics, robotics, creativity, idea visualization, computer-aided design, manufacturing, design analysis, and engineering education.

The Flow Physics and Computational Engineering Group (FPCE) The Flow Physics and Computational Engineering Group (FPCE) blends research on flow physics and modeling with algorithm development, scientific computing, and numerical database construction. FPCE is contributing new theories, models and computational tools for accurate engineering design analysis and control of complex flows (including multi phase flows, micro-fluidics, chemical reactions, acoustics, plasmas, interactions with electromagnetic waves and other phenomena) in aerodynamics, propulsion and power systems, materials processing, electronics cooling, environmental engineering, and other areas. A significant emphasis of research is on modeling and analysis of physical phenomena in engineering systems.

The Mechanics and Computational Group covers biomechanics, continuum mechanics, dynamics, experimental and computational mechanics, finite element analysis, fluid dynamics, fracture mechanics, micromechanics, nanotechnology, and simulation based design. Qualified students can work as research project assistants, engaging in thesis research in association with the faculty director and fellow students. Projects include analysis, synthesis, and control of systems; biomechanics; flow dynamics of liquids and gases; fracture and micromechanics, vibrations, and nonlinear dynamics; and original theoretical, computational, and experimental investigations in the strength and deformability of elastic and inelastic elements of machines and structures.

The Thermosciences Group conducts experimental and analytical research on both fundamental and applied topics in the general area of thermal and fluid systems. Research strengths include high Reynolds number flows, microfluidics, combustion and reacting flows, multiphase flow and combustion, plasma sciences, gas physics and chemistry, laser diagnostics, microscale heat transfer, convective heat transfer, and energy systems. Research motivation comes from applications including air-breathing and space propulsion, bioanalytical systems, pollution control, electronics fabrication and cooling, stationary and mobile energy systems, biomedical systems, and materials processing. Emphasis is on fundamental experiments leading towards advances in modeling, optimization, and control of complex systems.

Facilities
The department groups maintain modern laboratories that support undergraduate and graduate instruction and graduate research work.

The Structures and Composites Laboratory, a joint activity with the Department of Aeronautics and Astronautics, studies structures made of fiber-reinforced composite materials. Equipment for fabricating structural elements includes autoclave, filament winder, and presses. X-ray, ultrasound, and an electron microscope are available for nondestructive testing. The lab also has environmental chambers, a high speed impactor, and mechanical testers. Lab projects include designing composite structures, developing novel manufacturing processes, and evaluating environmental effects on composites.

Experimental facilities are available through the interdepartmental Structures and Solid Mechanics Research Laboratory, which includes an electrohydraulic materials testing system, a vehicle crash simulator, and a shake table for earthquake engineering and related studies, together with highly sophisticated auxiliary instrumentation. Facilities to study the micromechanics of fracture areas are available in the Micromechanics/Fracture Laboratory, and include a computer-controlled materials testing system, a long distance microscope, an atomic force microscope, and other instrumentation. Additional facilities for evaluation of materials are available through the Center for Materials Research, Center for Integrated Circuits, and the Ginzton Laboratory. Laboratories for biological experimentation are accessible through the School of Medicine. Individual accommodation is available for the work of each research student.

Major experimental and computational laboratories engaged in bioengineering work are located in the Biomechanical Engineering Group. Other biomechanical Engineering Group activities and resources are associated with the Rehabilitation Research and Development Center of the Veterans Administration Palo Alto Health Care System. This major national research center has computational and prototyping facilities. In addition, the Rehabilitation Research and Development Center utilizes the Electrophysiology Laboratory, Experimental Mechanics Laboratory, Human Motor Control Laboratory, Rehabilitation Device Design Laboratory, and Skeletal Biomechanics Laboratory. These facilities support graduate course work as well as Ph.D. student research activities.

Computational and experimental work is also conducted in various facilities throughout the School of Engineering and the School of Medicine, particularly the Advanced Biomaterials Testing Laboratory of the Department of Materials Science and Engineering, the Orthopaedic Research Laboratory in the Department of Functional Restoration, and the Vascular Research Laboratory in the Department of Surgery.
In collaboration with the School of Medicine, facilities throughout the Stanford Medical Center and the Veterans Administration Palo Alto Health Care System conduct biological and clinical work.

The Design Group has facilities for lab work in experimental mechanics and experimental stress analysis. Additional facilities, including MTS electrohydraulic materials test systems, are available in the Solid Mechanics Research Laboratory. Design Group students also have access to Center for Integrated Systems (CIS) and Ginzton Lab microfabrication facilities.

The group also maintains the Product Realization Laboratory (PRL), a teaching facility offering students integrated experiences in market definition, product design, and prototype manufacturing. The PRL provides coaching, design manufacturing tools, and networking opportunities to students interested in product development. The ME 310 Design Project Laboratory has facilities for CAD, assembly, and testing of original designs by master's students in the engineering design program. A Smart Product Design Laboratory supports microprocessor application projects. The Center for Design Research (CDR) has an excellent facility for concurrent engineering research, development, and engineering curriculum creation and assessment. Resources include a network of high-performance workstations. For worldwide web mediated concurrent engineering by virtual, non-collocated, design development teams, see the CDR web site at http://cdr.stanford.edu. In addition, CDR has several industrial robots for student projects and research. These and several NC machines are part of the CDR Manufacturing Sciences Lab. The Manufacturing Modeling Laboratory (MML) addresses various models and methods that lead to competitive manufacturing. MML links design for manufacturing (dfm) research at the Department of Mechanical Engineering with supply chain management activities at the Department of Management Science and Engineering. The Rapid Prototyping Laboratory consists of seven processing stations including cleaning, CNC milling, grit blasting, laser deposition, low temperature deposition, plasma deposition, and shot peening. Students gain experience by using ACIS and Pro Engineer on Hewlett Packard workstations for process software development. The Design Group also has a Product Design Loft in which students in the Joint Program in Design develop graduate thesis projects.

The Flow Physics and Computation Group has a 32 processor Origin 2000, 48-node and 85-node Linux cluster with high performance interconnection and an array of powerful workstations for graphics and data analysis. Several software packages are available, including all the major commercial CFD codes. FPC is strongly allied with the Center for Turbulence Research (CTR), a research consortium between Stanford and NASA, and the Center for Integrated Turbulence Simulations (CITS), which is supported by the Department of Energy (DOE) under its Accelerated Strategic Computing Initiative (ASCI). The Center for Turbulence Research has direct access to major national computing facilities located at the nearby NASA-Ames Research Center, including massively parallel super computers. The Center for Integrated Turbulence Simulations has access to DOE's vast supercomputer resources. The intellectual atmosphere of the Flow Physics and Computation Group is greatly enhanced by the interactions among CTR's and CITS's postdoctoral researchers and distinguished visiting scientists.

The Mechanics and Computation Group has a Computational Mechanics Laboratory that provides an integrated computational environment for research and research-related education in computational mechanics and scientific computing. The laboratory houses Silicon Graphics, Sun, and HP workstations and servers, including an 8-processor SGI Origin2000 and a 16-processor networked cluster of Intel-architecture workstations for parallel and distributed computing solutions of computationally intensive problems. Software is available on the laboratory machines, including commercial packages for engineering analysis, parametric geometry and meshing, and computational mathematics. The laboratory supports basic research in computational mechanics as well as the development of related applications such as simulation-based design technology.

The Thermosciences Group has four major laboratory facilities. The Heat Transfer and Turbulence Mechanics Laboratory concentrates on fundamental research aimed at understanding and improved prediction of turbulent flows and high performance energy conversion systems. The laboratory includes two general-purpose wind tunnels, a pressurized high Reynolds number tunnel, two supersonic cascade flow facilities, three specialized boundary layer wind tunnels, and several other flow facilities. Extensive diagnostic equipment is available, including multiple particle-image velocimetry and laser-Doppler anemometry systems.

The High Temperature Gas Dynamics Laboratory includes research on sensors, plasma sciences, cool and biomass combustion and gas pollutant formation, and reactive and non-reactive gas dynamics. Research facilities include diagnostic devices for combustion gases, a spray combustion facility, laboratory combustors including a coal combustion facility and supersonic combustion facilities, several advanced laser systems, a variety of plasma facilities, a pulsed detonation facility, and four shock tubes and tunnels. The Thermosciences Group and the Design Group share the Microscale Thermal and Mechanical Characterization laboratory (MTMC). MTMC is dedicated to the measurement of thermal and mechanical properties in thin-film systems, including microfabricated sensors and actuators and integrated circuits, and features a nanosecond scanning laser thermometry facility, a laser interferometer, a near-field optical microscope, and an atomic force microscope. The activities at MTMC are closely linked to those at the Heat Transfer Teaching Laboratory (HTTL), where undergraduate and master’s students use high-resolution probe stations to study thermal phenomena in integrated circuits and thermally-actuated microvalves. HTTL also provides macroscopic experiments in convection and radiative exchange.

The Energy Systems Laboratory is a teaching and research facility dedicated to the study of energy conversion systems. The lab includes three dynamometers for engine testing, a computer-controlled variable engine valve controller, a fuel-cell experimental station, a small rocket testing facility, and a small jet engine thrust stand.

The Guidance and Control Laboratory, a joint activity of the Department of Aeronautics and Astronautics and the Department of Mechanical Engineering, specializes in construction of electromechanical systems and instrumentation, particularly where high precision is a factor. Work ranges from robotics for manufacturing to feedback control of fuel injection systems for automotive emission control. The faculty and staff work in close cooperation with both the Design and Thermosciences Groups on device development projects of mutual interest.

Many computation facilities are available to department students. Three of the department’s labs are equipped with super-minicomputers. Numerous smaller minicomputers and microcomputers are used in the research and teaching laboratories.

Library facilities at Stanford beyond the general library include Engineering, Mathematics, and Physics department libraries.

### Mechanical Engineering Course Catalog Numbering System

The department uses the following course numbering system:

<table>
<thead>
<tr>
<th>Number</th>
<th>Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>001-099</td>
<td>Freshman and Sophomore</td>
</tr>
<tr>
<td>100-199</td>
<td>Junior and Senior</td>
</tr>
<tr>
<td>200-299</td>
<td>Advanced Undergraduate and Beginning Graduate</td>
</tr>
<tr>
<td>300-399</td>
<td>Graduate</td>
</tr>
</tbody>
</table>
Bachelor of Science in Mechanical Engineering

Undergraduates seeking to major in Mechanical Engineering should see the curriculum outlined in the "Undergraduate Degree in Mechanical Engineering" section of this bulletin. The University's basic requirements for the bachelor's degree are discussed in the "Undergraduate Degrees" section of this bulletin. Courses taken for the departmental major (mathematics; science; science, technology, and society; engineering fundamentals; and engineering depth) must be taken for a letter grade if the instructor offers the option.

A Product Design program offered by the Design Group leads to the B.S. in Engineering (Product Design). A major in Biomechanical Engineering offered by the Biomechanical Engineering Group leads to the B.S. in Engineering (Biomechanical Engineering), this may be appropriate for students preparing for medical school or graduate bioengineering studies.

Grade Requirements

To be recommended by the department for a B.S. in Mechanical Engineering, a student must achieve the minimum grade point average (GPA) set by the School of Engineering (2.0 in engineering fundamentals and mechanical engineering depth).

Students interested in the minor should see the "Minor in Mechanical Engineering" section of this bulletin.

Mechanical Engineering (ME)

Completion of the undergraduate program in Mechanical Engineering leads to the conferral of the Bachelor of Science in Mechanical Engineering.

Mission of the Undergraduate Program in Mechanical Engineering

The mission of the undergraduate program in Mechanical Engineering is to provide students with a balance of theoretical and practical experiences that enable them to address a variety of societal needs. The curriculum encompasses elements from a wide range of disciplines built around the themes of biomedicine, computational engineering, design, energy, and multiscale engineering. Course work may include mechatronics, computational simulation, solid and fluid dynamics, microelectromechanical systems, biomechanical engineering, energy science and technology, propulsion, sensing and control, nano- and micro- mechanics, and design. The program prepares students for entry-level work as mechanical engineers and for graduate studies in either an engineering discipline or other fields where a broad engineering background is useful.

Requirements

Mathematics

24 units minimum; see Basic Requirement 1

CME 102/ENGR 155A Ordinary Differential Equations for Engineers 5

or MATH 53 Ordinary Differential Equations with Linear Algebra

Select one of the following: 3-5

CME 106/ENGR 155C Introduction to Probability and Statistics for Engineers

STATS 110 Statistical Methods in Engineering and the Physical Sciences

STATS 116 Theory of Probability

Plus additional courses to total min. 24

Science

20 units minimum; see Basic Requirement 2

CHEM 31X Chemical Principles Accelerated 5

Plus additional required courses 15

Technology in Society

One course required; must be on SoE Approved Courses list at <ughb.stanford.edu> the year taken.; see Basic Requirement 4

Engineering Fundamentals

Two courses minimum; see Basic Requirement 3

ENGR 40M An Intro to Making: What is EE 5

ENGR 70A Programming Methodology (same as CS 106A) 5

Engineering Depth

Minimum of 68 Engineering Science and Design ABET units; see Basic Requirement 5

ENGR 14 Intro to Solid Mechanics 3

ENGR 15 Dynamics 3

ME 30 Engineering Thermodynamics 3

ME 70 Introductory Fluids Engineering 4

ME 80 Mechanics of Materials 4

ME 101 Visual Thinking 4

ME 103D Engineering Drawing and Design 2 1

ME 112 Mechanical Systems Design 4

Take one of the following:

ME 113 Mechanical Engineering Design

ME 170B Mechanical Engineering Design: Integrating Context with Engineering 3

ME 131A Heat Transfer 4 3-5

ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery 4

ME 140 Advanced Thermal Systems 4 5

or ME 141 Alternative Energy Systems

ME 161 Dynamic Systems, Vibrations and Control 4

ME 203 Design and Manufacturing 2 4

1 Math and science must total 45 units.

- Math: 24 units required and must include a course in differential equations (CME 102 Ordinary Differential Equations for Engineers or MATH 53 Ordinary Differential Equations with Linear Algebra; one of these required) and calculus-based Statistics (CME 106 Introduction to Probability and Statistics for Engineers or STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 116 is required.

- Science: 20 units minimum and requires courses in calculus-based Physics and Chemistry, with at least a full year (3 courses) in one or the other. CHEM 31A Chemical Principles I/CHM 31A Chemical Principles II are considered one course because they cover the same material as CHEM 31X Chemical Principles Accelerated but at a slower pace. CHEM 31X Chemical Principles Accelerated is recommended.

2 Courses ME 103D and ME 203 must be taken concurrently.

3 ME 170A and ME 170B are a 2-quarter Capstone Design Sequence and must be taken in consecutive quarters. Students that take the Capstone Design Sequence may use ME 170B as an alternative to ME 113. ME 170A will then be counted as an ME Elective Course.

4 ME 112, ME 131A, and ME 140 or ME 141, together fulfill the WIM requirement.

Options to complete the ME depth sequence: see the list of options in the ME major section of the Handbook for Undergraduate Engineering Programs (http://ughb.stanford.edu).

For additional information and sample programs see the Handbook for Undergraduate Engineering Programs (UGHB) (http://ughb.stanford.edu).
Honors Program

The Department of Mechanical Engineering offers a program leading to a B.S. in Mechanical Engineering with honors. This program offers a unique opportunity for qualified undergraduate engineering majors to conduct independent study and research at an advanced level with a faculty mentor.

Mechanical Engineering majors who have a grade point average (GPA) of 3.5 or higher in the major may apply for the honors program. Students who meet the eligibility requirement and wish to be considered for the honors program must submit a written application to the Mechanical Engineering student services office no later than the second week of Autumn Quarter in the senior year. The application to enter the program can be obtained from the ME student services office, and must contain a one-page statement describing the research topic and include an unofficial Stanford transcript. In addition, the application must be approved by a Mechanical Engineering faculty member who agrees to serve as the thesis adviser for the project. Thesis advisers must be members of Stanford’s Academic Council.

In order to receive departmental honors, students admitted to the program must:

1. maintain the 3.5 GPA required for admission to the honors program.
2. submit a completed thesis draft to the adviser by April 25. Further revisions and final endorsement by the adviser are to be finished by May 15, when two bound copies are to be submitted to the Mechanical Engineering student services office.
3. present the thesis at the Mechanical Engineering Poster Session held in mid-April.

Mechanical Engineering (ME) Minor

The following courses fulfill the minor requirements:

**General Minor**

**Total units: 25-26**

* This minor aims to expose students to the breadth of ME in terms of topics and analytic and design activities. Prerequisites: MATH 19 Calculus, MATH 20 Calculus, MATH 21 Calculus, and PHYSICS 41 Mechanics.
** Prerequisites: MATH 19 Calculus, MATH 20 Calculus, MATH 21 Calculus, MATH 51 Linear Algebra and Differential Calculus of Several Variables (or CME 100 Vector Calculus for Engineers) and PHYSICS 41 Mechanics.
*** This minor aims to expose students to design activities supported by analysis. Prerequisites: MATH 19 Calculus, MATH 20 Calculus, MATH 21 Calculus, PHYSICS 42 Classical Mechanics Laboratory, and PHYSICS 41 Mechanics.

Coterminal Master of Science Program in Mechanical Engineering

Stanford undergraduates who wish to continue their studies for the master of science degree in the coterminal program must have earned a minimum of 120 units towards graduation. This includes allowable Advanced Placement (AP) and transfer credit. Applicants must submit the Coterminal Online Application (https://applyweb.com/stanterm) no later than the quarter prior to the expected completion of their undergraduate degree. This is normally Winter Quarter (mid January) prior to Spring Quarter graduation.

The application must provide evidence of potential for strong academic performance as a graduate student. The Mechanical Engineering department graduate admissions committee makes decisions on each application. Typically, a GPA of at least 3.5 in engineering, science, and math is expected. Applicants must have completed two of ME 80 Mechanics of Materials, ME 112 Mechanical Systems Design, ME 131A Heat Transfer, and ME 131B Fluid Mechanics: Compressible Flow and Turbomachinery, and must take the Graduate Record Examination (GRE) before action is taken on the application.

Coterminal information, applications deadlines, and forms can be obtained from the ME student services office.

University Coterminal Requirements

Coterminal master’s degree candidates are expected to complete all master’s degree requirements as described in this bulletin. University requirements for the coterminal master’s degree are described in the "Coterminal Master’s Program (p. 46)" section. University requirements for the master’s degree are described in the "Graduate Degrees (p. 50)" section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master’s degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master’s program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.
Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

**Master of Science in Mechanical Engineering**

The basic University requirements for the M.S. degree are discussed in the “Graduate Degrees (p. 50)” section of this bulletin.

The master’s program consists of 45 units of course work taken at Stanford. No thesis is required, although many students become involved in research projects during the master’s program, particularly to explore their interests in working towards a Ph.D. degree. Students whose undergraduate backgrounds are entirely devoid of some of the major subject disciplines of engineering (for example, applied mechanics, applied thermodynamics, fluid mechanics, ordinary differential equations) may need to take some undergraduate courses to fill obvious gaps and prepare themselves to take graduate courses in these areas. Such students may require more than three quarters to fulfill the master’s degree requirements, as the makeup courses may only be used as unrestricted electives (see item 4 below) in the M.S. degree program. However, it is not the policy to require fulfillment of mechanical engineering B.S. degree requirements to obtain an M.S. degree.

**Mechanical Engineering**

The master’s degree program requires 45 units of course work taken as a graduate student at Stanford. No thesis is required. However, students who want some research experience during the master’s program may participate in research through ME 391 Engineering Problems and ME 392 Experimental Investigation of Engineering Problems.

Students are encouraged to refer to the most recent Mechanical Engineering Graduate Student Handbook provided by the student services office. The department’s requirements for the M.S. in Mechanical Engineering are as follows:

1. **Mathematical Fundamentals:** two mathematics courses for a total of at least 6 units from the following list are required: ME 300A, 300B, 300C, 408; CME 302; EE 261, 263; ENGR 155C/CME106. Only MATH courses with catalog numbers greater than 100 and CME courses with catalog numbers greater than 200 will count towards the math requirement. However, courses must cover two different areas out of the following choices: partial differential equations, linear algebra, numerical analysis and statistics. This excludes programming classes such as CS 106; CME 211, 212, 213, 214, 292. Those classes can counted towards the Approved Electives category. Courses taken for the math requirement must be taken for a letter grade.

2. **Depth in Mechanical Engineering:** a set of graduate-level courses in Mechanical Engineering to provide depth in one area. The faculty have approved these sets as providing depth in specific areas as well as a significant component of applications of the material in the context of engineering synthesis. These sets are outlined in the Mechanical Engineering Graduate Student Handbook. Depth courses must be taken for a letter grade.

3. **Breadth in Mechanical Engineering:** two additional graduate level courses (outside the depth) from the depth/breadth charts listed in the Mechanical Engineering Graduate Handbook. Breadth courses must be taken for a letter grade.

4. **Sufficient Mechanical Engineering Course Work:** students must take a minimum of 24 units of course work in mechanical engineering topics. For the purposes of determining mechanical engineering topics, any course on approved lists for the mathematics, depth, and breadth requirements counts towards these units. In addition, any graduate-level course with an ME course number is considered a mechanical engineering topic.

5. **Approved Electives** (to bring the total number of units to at least 39): electives must be approved by an adviser. Graduate engineering, mathematics, and science courses are normally approved. Approved electives must be taken for a letter grade. No more than 6 of the 39 units may come from ME 391/392 (or other independent study/research courses), and no more than 3 may come from seminars. Students planning a Ph.D. should discuss with their advisers the option of taking 391 or 392 during the master’s program. ME 391/392 (and other independent study courses) may only be taken on a credit/no credit basis.

6. **Unrestricted electives** (to bring the total number of units submitted for the M.S. degree to 45): students are encouraged to take these units outside engineering, mathematics, or the sciences. Students should consult their advisers on course loads and on ways to use the unrestricted electives to make a manageable program. Unrestricted electives must have catalog numbers greater than 100. Unrestricted electives may be taken CR/NC.

7. Within the courses satisfying the requirements above, there must be at least one graduate-level course with a laboratory component. Courses which satisfy this requirement are:

<table>

</tr>
</tbody>
</table>

Or other independent study courses may satisfy this requirement if 3 units are taken for work involving laboratory experiments.

Candidates for the M.S. in Mechanical Engineering are expected to have the approval of the faculty; they must maintain a minimum grade point average (GPA) of 3.0 in the 45 units presented for fulfillment of degree requirements (exclusive of independent study courses). All courses used to fulfill mathematics, depth, breadth, approved electives, and lab studies must be taken for a letter grade (excluding seminars, independent study, and courses for which a letter grade is not an option for any student).

Students falling below a GPA of 2.5 at the end of 20 units may be disqualified from further registration. Students failing to meet the complete degree requirements at the end of 60 units of graduate
registration are disqualified from further registration. Courses used to fulfill deficiencies arising from inadequate undergraduate preparation for mechanical engineering graduate work may not be applied to the 45 units required for completion of the MS degree.

Engineering
As described in the "School of Engineering" section of this bulletin, each department in the school may sponsor students in a more general degree, the M.S. in Engineering. Sponsorship by the Department of Mechanical Engineering (ME) requires (1) filing a petition for admission to the program by no later than the day before instruction begins, and (2) that the center of gravity of the proposed program lies in ME. No more than 18 units used for the proposed program may have been previously completed. The program must include at least 9 units of graduate-level work in the department other than ME 300A,B,C, seminars, and independent study. The petition must be accompanied by a statement explaining the program objectives and how it is coherent, contains depth, and fulfills a well-defined career objective. The grade requirements are the same as for the M.S. in Mechanical Engineering.

Master of Science in Engineering, Biomechanical Engineering
The Master of Science in Engineering: Biomechanical Engineering (MSE:BME) promotes the integration of engineering mechanics and design with the life sciences. Applicants are expected to have an additional exposure to biology and/or bioengineering in their undergraduate studies. Students planning for subsequent medical school studies are advised to contact Stanford’s Premedical Advising Office in Sweet Hall.

Students wishing to pursue this program must complete the Graduate Program Authorization form and get approval from the Student Services Office. This form is used to officially add the field to the student’s record. This form must be filled out electronically on Axess. The Mechanical Engineering Department does not have a coterminal Biomechanical Engineering Master’s program.

Degree Requirements
1. Mathematical competence (minimum 6 units) in two of the following areas: partial differential equations, linear algebra, complex variables, or numerical analysis, as demonstrated by completion of two appropriate courses from the following list: ME300A,B,C; MATH106, 109, 113, 131M/P, 132; STATS110, or ENGR155C; CME108, 302. Students who have completed comparable graduate-level courses as an undergraduate, and who can demonstrate their competence to the satisfaction of the instructors of the Stanford courses, may be waived via petition from this requirement by their adviser and the Student Services Office. The approved equivalent courses should be placed in the approved electives category of the program proposal.

2. Graduate Level Engineering Courses (minimum 21 units), consisting of:
   a. Biomechanical engineering restricted electives (9 units) to be chosen from:

<table>

   b. Specialty in engineering (9-12 units): A set of three or four graduate level courses in engineering mechanics, materials, controls, or design (excluding bioengineering courses) selected to provide depth in one area. Such sets are approved by the Mechanical Engineering Faculty. Comparable specialty sets composed of graduate engineering courses outside the Mechanical Engineering Department can be used with the approval of the student's adviser. Examples can be obtained from the Biomechanical Engineering Group Office (Durand 223).

c. Graduate engineering electives (to bring the total number of graduate level engineering units to at least 21). These electives must contribute to a cohesive degree program, and be approved by the student's adviser. No units may come from bioengineering courses, mathematics courses, or seminars.

3. Life science approved electives (minimum 6 units): Undergraduate or graduate biological/medical science/chemistry courses which contribute to a cohesive program.

5. General approved electives (to bring the total number of units to 39): These courses must be approved by the student’s adviser. Graduate level engineering, math, and physical science courses and upper division undergraduate or graduate life science courses are normally approved.

6. Unrestricted electives (to bring the total number of units to 45): Students without undergraduate biology are encouraged to use some of these unrestricted units to strengthen their biology background. Students should consult their adviser for recommendations on course loads and on ways to use the unrestricted electives to create a manageable program. Unrestrictive electives must have catalog numbers greater than 100.

All courses except unrestricted electives must be taken for a letter grade unless letter grades are not an option. A minimum cumulative GPA of 3.0 is required for degree conferral.

Master of Science in Engineering, Design Impact

Note: The Master of Science, Product Design has been discontinued. For the most up to date description, please review AY 2016-17 bulletin.

The Master’s Program in Design Impact is project-driven, highly immersive, and based on design thinking, the human-centered design process pioneered at Stanford. We teach the process, mindsets and skills needed to lead high-impact design teams. In our work on products, services, systems, and experiences, empathy is our guiding principle. Students completing the two-year program will earn a Master’s of Science in Engineering degree with a concentration in Design Impact (MSE-Design Impact).

Degree Requirements
In the first year, students take all their classes together as a cohort. In the second year, students will continue to work together in the year-long “Design Impact” course (ME316A,B,C: Design Master's Project), each selecting to work on a project related to one of the two Impact themes. This sequence of classes will be the culmination of their educational experience and launch them into their individual careers as designers.

The student will select electives in second year with their advisor. The elective will be one of two types: focused on building a deep learning in the student’s chosen Impact theme area and expanding the student’s skill set and design toolkit. Appropriate electives are described below (5).

Candidates for the Design Impact Engineering Master’s Degree are expected to have the approval to graduate from the faculty, and a minimum GPA of 3.0 in the 58 units completed in the program.

1 ME 203 should be completed in the first year, Autumn Quarter of the degree program.
2 CS106A is should be completed in the first year, Winter Quarter of the degree program. It is for students who have had limited exposure to computer programming and want to start at the introductory level. Students who have already had an introduction to computer science, or who have professional programming experience, should consider taking CS106B or consult with their advisor on the best-fit computer science class. If a different CS course is selected, it must be completed in the Winter term of the first year of the Master's degree program.
3 May substitute ME 368 d Leadership: Design Leadership in Context.
4 A course that teaches Business Considerations in Design will be selected by the student in consultation with their advisor. Options include: ME 215C Analytical Product Design, MS&E 140X Financial Accounting Concepts and Analysis, and ACCT 317 Managerial Accounting: Performance Measurement, Compensation, and Governance.
5 ME 316A, B & C are taken sequentially for three quarters during the second year.
6 Students will choose courses at the 200 level or higher, from any of the Schools at the University to fulfill their elective requirement. Electives must be selected to fulfill education and career objectives and be related to their selected theme area within the Design Impact program. The advisor must sign off on electives prior to the students committing to taking them.

Note: All required classes and electives must be taken for a letter grade unless:

1) The class is not offered for a letter grade, OR
2) Prior approval has been granted to take a class CR/NC.

Engineer in Mechanical Engineering

The basic University requirements for the degree of Engineer are discussed in the "Graduate Degrees (p. 50)" section of this bulletin. This degree requires an additional year of study beyond the M.S. degree and includes a research thesis. The program is designed for students who wish to do professional engineering work upon graduation and who want to engage in more specialized study than is afforded by the master’s degree alone.

Admission standards are substantially the same as indicated under the master’s degree. However, since thesis supervision is required and the availability of thesis supervisors is limited, admission is not granted until the student has personally engaged a faculty member to supervise a research project. This most often involves a paid research assistantship awarded by individual faculty members (usually from the funds of sponsored research projects under their direction). Thus, individual arrangement between student and faculty is necessary. Students studying for the M.S. degree at Stanford who wish to continue to the Engineer degree ordinarily make such arrangements during the M.S. degree program. Students holding master’s degrees from other universities are invited to apply and may be admitted providing they are sufficiently well qualified and have made thesis supervision and financial aid arrangements.

Department requirements for the degree include a thesis; up to 18 units of credit are allowed for thesis work (ME 400 Thesis). In addition to the thesis, 27 units of approved advanced course work in mathematics, science, and engineering are expected beyond the requirements for the M.S. degree; the choice of courses is subject to approval of the adviser. Students who have not fulfilled the Stanford M.S. degree requirements are required to do so, with allowance for approximate equivalence of courses taken elsewhere; up to 45 units may be transferable. A total of 90 units is required for degree conferral.

Candidates for the degree must have faculty approval and must fulfill the requirements for the Stanford M.S. degree in Mechanical Engineering or another discipline.

Doctor of Philosophy in Mechanical Engineering

The basic University requirements for the Ph.D. degree are discussed in the "Graduate Degree" section of this bulletin. The Ph.D. degree is intended primarily for students who desire a career in research, advanced development, or teaching; for this type of work, a broad background in mathematics and the engineering sciences, together with intensive study and research experience in a specialized area, are the necessary requisites.

Ph.D. students must have a master’s degree from another institution, or must fulfill the requirements for the Stanford M.S. degree in Mechanical Engineering or another discipline.

In special situations dictated by compelling academic reasons, Academic Council members who are not members of the department’s faculty may serve as the principal dissertation adviser when approved by the department. In such cases, a member of the department faculty must serve as program adviser and as a member of the reading committee, and agree to accept responsibility that department procedures are followed and standards maintained.

Admission involves much the same consideration described under the Engineer degree. Since thesis supervision is required, admission is not granted until the student has personally engaged a member of the faculty to supervise a research project. Once a student has obtained a research supervisor, this supervisor becomes thereafter the student’s academic adviser. Research supervisors may require that the student pass the departmental qualifying examination before starting research and before receiving a paid research assistantship. Note that research assistantships are awarded by faculty research supervisors and not by the department.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of engineering fundamentals by passing a qualifying examination. The academic level and subject matter of the examination correspond approximately to the M.S. program described above. Typically, the exam is taken shortly after the student completes the M.S. degree requirements. The student is required to have a minimum graduate Stanford GPA of 3.5 to be eligible for the exam (grades from independent study courses are not included in the GPA calculation). Once the student’s faculty sponsor has agreed that the exam should be scheduled, the student must submit an application folder containing several items including a curriculum vitae, research project abstract, and preliminary dissertation proposal. Information, examination dates, and deadlines may be obtained from the department’s student services office.
Ph.D. candidates must complete a minimum of 21 units (taken for a letter grade) of approved formal course work (excluding research, directed study, and seminars) in advanced study beyond the M.S. degree. The courses should consist primarily of graduate courses in engineering and sciences, although the candidate’s adviser may approve a limited number of upper-level undergraduate courses and courses outside of engineering and sciences, as long as such courses contribute to a strong and coherent program. In addition to this 21-unit requirement, all Ph.D. candidates must participate each quarter in one of the following (or equivalent) seminars:

The department has a breadth requirement for the Ph.D. degree. This may be satisfied either by a formal minor in another department (generally 20 units) or by at least 9 units of course work (outside of the primary research topic) which are approved by the principal dissertation adviser. If a minor is taken, 9 units from the minor requirements can be counted towards the depth requirement.

The Ph.D. thesis normally represents at least one full year of research work and must be a substantial contribution to the field. Students may register for course credit for thesis work (ME 500) to help fulfill University academic unit requirements, but there is no minimum limit on registered dissertation units, as long as students are registered in at least 8 units (10 is recommended) per quarter prior to TGR. Candidates should note that only completed course units are counted toward the requirement, so ungraded courses or courses with an "N" grade must be cleared before going TGR. Questions should be directed to the department student services office.

The final University oral examination (dissertation defense) is conducted by a committee consisting of a chair from another department and four faculty members of the department or departments with related interests. Usually, the committee includes the candidate’s adviser, reading committee members, plus two more faculty. The examination consists of two parts. The first is open to the public and is scheduled as a seminar talk, usually for one of the regular meetings of a seminar series. The second is conducted in private and covers subjects closely related to the dissertation topic.

**Ph.D. Minor in Mechanical Engineering**

Students who wish a Ph.D. minor in ME should consult with the ME student services office. A minor in ME may be obtained by completing 20 units of approved graduate-level ME courses. Courses approved for the minor must form a coherent program and must be chosen from those satisfying requirement 2 for the M.S. in Mechanical Engineering.

See the Mechanical Engineering Graduate Student Handbook produced by the Mechanical Engineering student services office for more information.

**Overseas Studies Courses in Mechanical Engineering**

The Bing Overseas Studies Program (http://bosp.stanford.edu) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program’s student services office for applicability of Overseas Studies courses to a major or minor program.
The Bing Overseas Studies course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Units

explorecourses:OSPRe
The largest of Stanford's seven schools, the School of Humanities and Sciences is the center of the University's liberal arts education. Through exposure to the humanities and arts, undergraduate and graduate students consider the ethical, aesthetic, and intellectual dimensions of the human experience, past and present, and are thereby prepared to make thoughtful and imaginative contributions to the culture of the future. Through the study of social, political, and economic events, they acquire theories and techniques for the analysis of specific societal issues, as well as general cross-cultural perspectives on the human condition. And through exposure to the methods and discoveries of mathematics and the sciences, they become well-informed participants and leaders in today's increasingly technological societies.

The School of Humanities and Sciences is comprised of academic departments, which are organized into three clusters, each with its own distinct character.

- Humanities and Arts
  - Art and Art History
  - Classics
  - Division of Literatures, Cultures, and Languages
    - Comparative Literature
    - French and Italian
    - German Studies
    - Iberian and Latin American Cultures
    - Slavic Languages and Literatures
  - East Asian Languages and Cultures
  - English
  - History
  - Linguistics
  - Music
  - Philosophy
  - Religious Studies
  - Theater and Performance Studies

- Social Sciences
  - Anthropology
  - Communication
  - Economics
  - Political Science
  - Psychology
  - Sociology

- Natural Sciences
  - Applied Physics
  - Biology (including Hopkins Marine Station)
  - Chemistry
  - Mathematics
  - Physics
  - Statistics

The school also includes interdisciplinary degree programs that bridge traditionally disparate fields in the humanities and sciences: African and African American Studies; African Studies; American Studies; Archaeology; Arts; Biophysics; Comparative Studies in Race and Ethnicity; East Asian Studies; Ethics in Society; Feminist, Gender, and Sexuality Studies; Global Studies; Human Biology; Human Rights; Humanities; International Policy Studies; International Relations; Latin American Studies; Mathematical and Computational Science; Modern Thought and Literature; Public Policy; Russian, East European and Eurasian Studies; Science, Technology, and Society; Symbolic Systems; and Urban Studies.

In addition, the school has diverse programs and research centers that do not currently grant degrees such as the Bill Lane Center for the American West; the Center for Computer Research in Music and Acoustics; the Center for Molecular Analysis; the Confucius Institute; the Center for Medieval and Early Modern Studies; the Michelle R. Clayman Center for Gender Research; the Jasper Ridge Biological Preserve; and the Institute for Research in the Social Sciences. For more information about the School of Humanities and Sciences and a complete listing of research centers and programs, see the School's web site (http://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/http://humsci.stanford.edu/about).

Prospective applicants and candidates for the degree of Bachelor of Arts, Bachelor of Science, Bachelor of Arts and Sciences, Master of Arts, Master of Fine Arts, Master of Public Policy, Master of Science, Doctor of Musical Arts, or Doctor of Philosophy should consult the relevant department or program for detailed information about application procedures and degree requirements.

Faculty

Dean: Richard P. Saller

Senior Associate Deans: R. Lanier Anderson, Ellen M. Markman, Kathryn A. Moler

Senior Associate Dean for Finance and Administration: Stephen Olson

Associate Dean for Faculty Affairs: Stephen Olson

Associate Dean for Graduate and Undergraduate Studies: Susan J. Weersing

Assistant Dean for Diversity Programs, Data and Technology: Ayodele Thomas

Assistant Dean for Curricular and Academic Support: Beth McKeown

Graduate Diversity Recruitment Officer: Joseph L. Brown

Department Chairs: B. Douglas Bernheim (Economics), Emmanuel Candes (Statistics), Mark Crimmins (Philosophy), Mark W. Denny (Hopkins Marine Station), Dan Edelstein (Division of Literatures, Cultures, and Languages), Ronald Egan (East Asian Languages and Cultures), Martin Fefer (Applied Physics), Judith L. Goldstein (Political Science), Ian H. Gotlib (Psychology), Keith O. Hodgson (Chemistry), Ethel J. Ionel (Mathematics), Branimir Jakovljevic (Theater and Performance Studies), Dan Jurafsky (Linguistics), Jarek Kapuscinski (Music), John Kieschnick (Religious Studies), Peter F. Michelson (Physics), Alexander Nemirov (Art and Art History), Grant Parker (Classics), Tim Stein (Biological), Matthew H. Sommer (History), Fred Turner (Communication), Alex Woloch (English), Sylvia Yanagisako (Anthropology), Xueguang Zhou (Sociology)

Lecturer: Ayodele Thomas
AFRICAN AND AFRICAN AMERICAN STUDIES

Undergraduate Program in African and African American Studies

The Program in African and African American Studies (AAAS), established in 1969, was the first ethnic studies program developed at Stanford University and the first African and African American Studies program at a private institution in the U.S. The AAAS program provides an interdisciplinary introduction to the study of peoples of African descent as a central component of American culture, offering a course of study that promotes research across disciplinary and departmental boundaries as well as providing research training and community service learning opportunities for undergraduates. It has developed an extensive network of Stanford scholars who work in race studies specific to AAAS and in concert with the Center for Comparative Studies in Race and Ethnicity.

AAAS encourages an interdisciplinary program of study drawn from fields including anthropology, art, art history, economics, education, drama, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology. The program emphasizes rigorous and creative scholarship and research, and fosters close academic advising with a faculty adviser, the AAAS Associate Director, and the Director.

AAAS is an interdisciplinary program (IDP) affiliated with the Center for Comparative Studies in Race and Ethnicity (p. 459) (CCSRE) and offers a major independent of it. CCSRE offers additional majors in Asian American Studies, Chicana/o Studies, Comparative Studies in Race and Ethnicity, and Native American Studies.

The Interdisciplinary Program in African and African American Studies (AAAS) provides students the opportunity to structure a major or minor with a core curriculum designed to develop a comparative and multidisciplinary understanding of the experiences and communities on the continent of Africa and African Americans within a broader global, diasporic dialogue. Additionally, majors or minors can focus their course work in one of eleven thematic concentrations.

The directors of the program and the advisory board constitute the AAAS curriculum committee, the policy making body for the interdisciplinary program.

Mission Statement for the Undergraduate Program in African and African American Studies

The mission of the undergraduate program in African and African American Studies is to provide students with an interdisciplinary introduction to the study of people of African descent as a central component of American culture. Courses in the major promote research across disciplinary and departmental boundaries as well as provide students with research training and community service learning opportunities. Courses of study are drawn from anthropology, art, art history, economics, education, drama, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, and sociology among others. The program provides an intellectual background for students considering graduate school or professional careers.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the program’s undergraduate program. Students are expected to demonstrate:

1. an interdisciplinary understanding of scholarship related to the African diaspora and Africa, drawing on interdisciplinary course work and each student's individualized concentration.
2. the ability to identify and critically assess different disciplinary, methodological, and interpretive approaches to the study of African Americans, Africans, and/or people of the African diaspora.
3. an understanding of comparative approaches to race.
4. skills in disciplinary methods necessary for their study.
5. the ability to express their interpretive and analytical arguments in clear, effective prose.

Bachelor of Arts in African and African American Studies

Core Curriculum

All core courses taken for the major must be taken for a letter grade.

Requirements

Majors must complete a total of 60 units, consisting of the following:

1. One of two required courses:
   a. AFRICAAM 43 Introduction to English III: Introduction to African American Literature (5 units), or
   b. AFRICAAM 105 Introduction to African and African American Studies (5 units)

2. One Social Science course from AAAS approved core course list. (http://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&view=catalog&academicYear=&q=AAAS%3Acore&collapse=) (5 units)

3. One Humanities course from AAAS approved core course list. (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&view=catalog&academicYear=&q=AAAS%3Ah&collapse=) (5 units)

4. One course in African Studies (http://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Ah%3Af%3Aafrica&collapse=) (5 units)

5. AFRICAAM 200X Honors Thesis and Senior Thesis Seminar - WIM. (5 units)

6. 35 units of AAAS core (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Acore&collapse=) and related (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Ah%3Af&collapse=) (5 units)

   - At least 10 of the 35 units must be core courses (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Acore&collapse=), which are defined as courses that are primarily focused on Africa (https://explorecourses.stanford.edu/search?q=AAAS%3Ah%3Af%3Aafrica&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on), African American Studies, the Caribbean (https://explorecourses.stanford.edu/search?q=AAAS%3Ah%3Acaribbean&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on), or the African Diaspora (https://explorecourses.stanford.edu/search?q=AAAS%3Ah%3Adiaspora&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on).

Bachelor of Arts in African and African American Studies

Majors must complete a total of 60 units, consisting of the following:

1. One of two required courses:
   a. AFRICAAM 43 Introduction to English III: Introduction to African American Literature (5 units), or
   b. AFRICAAM 105 Introduction to African and African American Studies (5 units)

2. One Social Science course from AAAS approved core course list. (http://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&view=catalog&academicYear=&q=AAAS%3Acore&collapse=) (5 units)

3. One Humanities course from AAAS approved core course list. (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&view=catalog&academicYear=&q=AAAS%3Ah&collapse=) (5 units)

4. One course in African Studies (http://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Ah%3Af%3Aafrica&collapse=) (5 units)

5. AFRICAAM 200X Honors Thesis and Senior Thesis Seminar - WIM. (5 units)

6. 35 units of AAAS core (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Acore&collapse=) and related (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Ah%3Af&collapse=) (5 units)

   - At least 10 of the 35 units must be core courses (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=AAAS%3Acore&collapse=), which are defined as courses that are primarily focused on Africa (https://explorecourses.stanford.edu/search?q=AAAS%3Ah%3Af%3Aafrica&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on), African American Studies, the Caribbean (https://explorecourses.stanford.edu/search?q=AAAS%3Ah%3Acaribbean&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on), or the African Diaspora (https://explorecourses.stanford.edu/search?q=AAAS%3Ah%3Adiaspora&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on).
Students also work closely with a faculty adviser, the AAAS associate director, and the AAAS director in developing a coherent thematic emphasis within their major that reflects their scholarly interests in the field.

**Thematic Emphasis**

AAAS majors select a thematic emphasis. Selecting an emphasis allows students to customize their curriculum and synthesize coursework taken across various departments and programs into a coherent focus. Emphases offered include (but are not limited to):

- Africa (https://explorecourses.stanford.edu/search?q=AAAS%3A%3Afra&view=catalog&page=0&academicYear=&collapse=&filter-coursestatus-Active=on)
- African Americans
- Class
- Diaspora (https://explorecourses.stanford.edu/search?q=AAAS%3A%3adiaspora&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Education (https://explorecourses.stanford.edu/search?q=AAAS%3A%3aeduction&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Gender (https://explorecourses.stanford.edu/search?q=AAAS%3A%3agender&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Historical Period (https://explorecourses.stanford.edu/search?q=AAAS%3A%3ahistorical_period&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Identities, Diversity, and Aesthetics (IDA) (https://explorecourses.stanford.edu/search?q=AAAS%3A%3aida&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Linguistics (https://explorecourses.stanford.edu/search?q=AAAS%3A%3alanguage&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Mixed Race (https://explorecourses.stanford.edu/search?q=AAAS%3A%3amixed_race&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)
- Theory (https://explorecourses.stanford.edu/search?q=AAAS%3A%3atheory&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=)

Senior Thesis Research and AFRICAAM 200Z Honors Thesis and Senior Thesis Seminar, offered in Autumn Quarter. The course takes students through the process of researching an honors thesis, including conceptualization, development of prospectus, development of theses, research, analysis, and finally the process of drafting and writing. This course meets the Writing in the Major requirement (WIM).

Directed Reading and Research

Directed reading and research allows students to focus on a special topic of interest. In organizing a reading or research plan, the student consults with the director of the major and one or more faculty members specializing in the area or discipline.

Courses that fulfill directed reading and research requirements:

AFRICAAM 190  Independent Study  1-5
AFRICAAM 195  Honors Project  5
AFRICAAM 199  Honors Project  1-5

Honors Program for Majors in African and African American Studies

The honors program offers an opportunity to do independent research for a senior thesis. It is open to majors who have maintained a grade point average (GPA) of at least 3.5 in the major and 3.3 overall. The honors thesis is intended to enable students to synthesize skills to produce a document or project demonstrating a measure of competence in their specialty.

The honors program begins with a proposal describing the project that is approved by the faculty adviser and AAAS directors. Students are required to identify both a faculty adviser and a second reader for the thesis project. The faculty adviser for the honors thesis must be an academic council faculty member and affiliated faculty of the student’s major.

Honors students must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar which fulfills the program's WIM requirement, during Autumn Quarter of the senior year and may take up to an additional 10 units of honors work (AFRICAAM 200Y Honors Thesis and Senior Thesis Research and AFRICAAM 200Z Honors Thesis and Senior Thesis Research) to be distributed across Winter and Spring quarters of senior year to continue their access to peer and faculty support as they write their theses. Students must complete their theses with a grade of 'B+' to receive honors in AAAS.

In May of the senior year, honors students are afforded an opportunity to present their research formally. Prizes for best undergraduate honors thesis are awarded annually by the Program in African and African American Studies.

Thematic Emphasis

AAAS majors select a thematic emphasis. Selecting an emphasis allows students to customize their curriculum and synthesize course work taken across various departments and programs into a coherent focus. Emphases offered include; for faster navigation click on the links to the right:

Thematic Emphasis in Africa

Students in the African and African American Studies major can choose a concentration in Africa. The Thematic Emphasis in Africa concentration is designed to investigate how individual African states’ domestic and foreign policy, law, history, culture, and society are formed within conversations, debates, policies and studies. Issues of immigration, citizenship, empire and expansion, defense, diplomacy, human rights, public welfare, social justice and law, educational rights and other topics are explored.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Africa concentration.

Senior Seminar

Research and writing of the senior honors thesis or senior paper is under the supervision of a faculty project adviser. All majors in the IDP in AAAS, even those who opt to write honors theses in other departments and programs, must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar, offered in Autumn Quarter. The course takes students through the process of researching an honors thesis, including conceptualization, development of prospectus, development of theses, research, analysis, and finally the process of drafting and writing. This course meets the Writing in the Major requirement (WIM).

Honors Program for Majors in African and African American Studies

The honors program offers an opportunity to do independent research for a senior thesis. It is open to majors who have maintained a grade point average (GPA) of at least 3.5 in the major and 3.3 overall. The honors thesis is intended to enable students to synthesize skills to produce a document or project demonstrating a measure of competence in their specialty.

The honors program begins with a proposal describing the project that is approved by the faculty adviser and AAAS directors. Students are required to identify both a faculty adviser and a second reader for the thesis project. The faculty adviser for the honors thesis must be an academic council faculty member and affiliated faculty of the student’s major.

Honors students must enroll in AFRICAAM 200X Honors Thesis and Senior Thesis Seminar which fulfills the program's WIM requirement, during Autumn Quarter of the senior year and may take up to an additional 10 units of honors work (AFRICAAM 200Y Honors Thesis and Senior Thesis Research and AFRICAAM 200Z Honors Thesis and Senior Thesis Research) to be distributed across Winter and Spring quarters of senior year to continue their access to peer and faculty support as they write their theses. Students must complete their theses with a grade of 'B+' to receive honors in AAAS.

In May of the senior year, honors students are afforded an opportunity to present their research formally. Prizes for best undergraduate honors thesis are awarded annually by the Program in African and African American Studies.

Thematic Concentration in African Americans

Students in the African and African American Studies major can choose a concentration in African Americans. The Thematic Concentration in African Americans concentration is designed to explore the historical and contemporary experiences of African Americans. Attention is paid to the interactions between the social, economic, cultural, historical, linguistic, genetic, geopolitical, ecological, and biomedical factors that shape and have shaped African American society.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the African American concentration.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Thematic Concentration in Diaspora

Students in the African and African American Studies major can choose a concentration in the Diaspora. The Thematic Concentration in Diaspora concentration is designed to explore the exchanges among peoples and cultures from the continent of Africa and their global impact through symbolic, aesthetic and empirical exchanges (i.e. trade, travel, exploration, and migration). This concentration will also examine comparisons, connections and genealogical relations among geographically dispersed cases in order to consider past and present African identities in their global contexts.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office. 

Students may find the following courses useful in fulfilling requirements in the Class concentration.

### Thematic Concentration in Class

Students in the African and African American Studies major can choose a concentration in Class. The Thematic Concentration in Class concentration is designed to explore the cultural, social, legal, and political construction of racial and ethnic differences in African and/ or African American history, while examining the historical specificity of markets, money, property, and labor relations and explores the interdependence between the economy and politics, society, and culture.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.
Students may find the following courses useful in fulfilling requirements in the Diaspora concentration.

**AFRICAAM 21**  African American Vernacular English  3-5
**AFRICAAM 31**  RealTalk: Intimate Discussions about the African Diaspora  3-4

### Thematic Concentration in Education

Students in the African and African American Studies major can choose a concentration in Education. The Thematic Concentration in Education concentration is designed to explore the history, policy, and practice in education to understand how issues of race, ethnicity, socioeconomic status, culture, and language shape educational opportunity. The goal of the concentration is to develop an understanding of the core issues facing educators and policy makers so that students may learn how they can contribute to the social and political discourse surrounding issues of education and opportunity policy.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Diaspora concentration.

**AFRICAAM 31**  RealTalk: Intimate Discussions about the African Diaspora  1
**AFRICAAM 32**  The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice  1-5

Thematic Concentration in Gender

Students in the African and African American Studies major can choose a concentration in Gender. The Thematic Concentration in Gender concentration is designed to explore the historical and contemporary experiences and histories of women or men among the cultures from the continent of Africa and the diaspora. Students also explore how these how societies organize gender roles, relations, and identities, and how these intersect with other hierarchies of power, such as class, race, nationality, ethnicity, sexuality, disability and age.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Gender concentration.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should consult with an advisor.

The concentration typically requires 15 units in IDA-approved courses, which may include the senior honors thesis. IDA Concentration students must also complete a senior creative project.

Possible senior projects could include: a stage production, an album of music, a fiction or creative non-fiction piece, or an arts workshop. An honors thesis may incorporate their project as the basis for their thesis.

Students interested in this concentration should contact the Thematic Studies Office (https://diversityarts.stanford.edu/about/contact).

Students may find the following courses useful in fulfilling requirements in the Identity, Diversity and Aesthetics (IDA) concentration.

Thematic Concentration in Linguistics

Students in the African and African American Studies major can choose a concentration in Linguistics. The Thematic Concentration in Linguistics concentration is designed to explore the relationships between language, race and ethnicity across a wide range of social, cultural and educational contexts.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office. Students may obtain credit for the study of approved AAAS languages towards their degree. If students take 15 or more units of an approved language relevant to their concentration, the language(s) will appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Linguistics concentration.

Thematic Concentration in Mixed Race

Students in the African & African American Studies major can choose a concentration in Mixed Race. The Thematic Concentration in Mixed Race concentration is designed to explore how African and/or African American identities were and are constituted in relation to issues of race and ethnicity. The concentration investigates how conversations, debates, and policies on mixed race identities effect domestic and foreign policy, law, history, culture, society and studies on race and ethnicity. In this concentration a number of topics (Issues of immigration, citizenship, empire and expansion, defense, diplomacy, human rights, public welfare, social justice and law, educational rights, etc) are explored from the angle of how racial and ethnic difference impacts debate and policy.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Mixed Race concentration.

Students in the African and African American Studies major can choose a concentration in Theory. The Thematic Concentration in Theory is a program designed to explore the metanarratives and theoretical frameworks for analyzing enduring issues of cultural, religious, and political life both within African and/or African American societies and between political communities. Students will also explore the role of identities, values and prejudices that are the product of historical processes and the interaction of different peoples.

The concentration is not declared on Axess; it does not appear on the transcript or diploma. Students interested in this concentration should contact the AAAS undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Theory concentration.
