EARTH SYSTEM SCIENCE

Courses offered by the Department of Earth System Science are listed under the subject code ESS on the Stanford Bulletin's ExploreCourses web site (https://explorecourses.stanford.edu/search?view=catalog&academicYear=&page=0&g=ESS&filter-departmentcode-ESS=on&filter-coursetatus-Active=on&filter-term-Summer=on).

On April 16, 2015, the Senate of the Academic Council approved the change of name for the department to become the Department of Earth System Science. Prior to April 16, the department was named the Department of Environmental Earth System Science.

Earth System Science studies the planet’s oceans, lands, and atmosphere as an integrated system, with an emphasis on changes occurring during the current period of overwhelming human influence, the Anthropocene. Faculty and students within the department use the principles of biology, chemistry, and physics to study problems involving processes occurring at the Earth’s surface, such as climate change and global nutrient cycles, providing a foundation for problem solving related to environmental sustainability and global environmental change.

Graduate Programs in Earth System Science

The University’s basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin. The Department of Earth System Science does not offer coterminal admission to the master’s in Earth System Science.

Learning Objectives (Graduate)

The objectives of the doctoral program in Earth System Science are to enable students to develop the skills needed to conduct original investigations in environmental and earth system sciences, to interpret the results, and to present the data and conclusions in a publishable manner. Graduates should develop strong communication skills with the ability to teach and communicate effectively with the public.

The objectives of the master’s program in Earth System Science is to continue a student’s training in one of the earth science disciplines and to prepare students for a professional career or doctoral studies.

On April 16, 2015, the Senate of the Academic Council approved the Master of Science in Earth System Science. Students who matriculated into the Master of Science in Environmental Earth System Science have the option of changing the name of their degree to Earth System Science. Degree requirements remain the same.

Master of Science in Earth System Science

The University’s requirements for M.S. degrees are outlined in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Admission

For admission to graduate work in the department, the applicant must have taken the Aptitude Test (verbal, quantitative, and analytical writing assessment) of the Graduate Record Examination. In keeping with University policy, applicants whose first language is not English must submit TOEFL (Test of English as a Foreign Language) scores from a test taken within the last 18 months. Individuals who have completed a B.S. or two-year M.S. program in the U.S. or other English-speaking country are not required to submit TOEFL scores.

Unit Requirements

1. A minimum of 45 units of course work at the 100 level or above.
2. Half of the courses used to satisfy the 45-unit requirement must be intended primarily for graduate students, usually at the 200 level or above.
3. No more than 15 units of thesis research may be used to satisfy the 45-unit requirement.
4. Some students may be required to make up background deficiencies in addition to these basic requirements.
5. By the end of Winter Quarter of the first year in residence, a student must complete at least three courses taught by a minimum of two different department faculty members.

Course Work

Stanford Bulletin 2018-19
For admission to graduate work in the department, the applicant must
admission bulletin/4901.htm) the “Graduate Degrees
The University’s requirements for the Ph.D. degree are outlined in
Earth System Science. Degree requirements remain the same.
On April 16, 2015, the Senate of the Academic Council approved
for the Ph.D. The remaining 90 units can consist of all research units
are awarded for course work completed elsewhere (i.e., not eligible to
50 percent of those units must be in
Ph.D. students must complete a minimum of four graduate level,
letter-grade courses of at least 3 units each from four different faculty
members on the Academic Council in the University.
By the end of Spring Quarter of their first year in residence, students
must complete at least three graduate level courses taught by a
minimum of two different ESS faculty members.

Teaching Assistantship
As a program requirement, advanced degree candidates in ESS complete
TA-appointed (25%) quarters at a minimum of: 2 for Ph.D. students and
1 for master’s students, to be completed over the course of study. In
addition, additional TA quarters may be considered and/or required in
consultation with the research adviser, depending on academic goals,
funding availability, or the requirements of individual doctoral programs.

Advising
The department’s graduate coordinator, in coordination with the
departmental faculty, appoints an academic adviser prior to registration
with appropriate consideration of the student's background, interests, and
professional goals. In consultation with the adviser, the student plans a
program of course work for the first year. The faculty adviser is charged
with designing the curriculum in consultation with the student specific to
the research topic.

Thesis
Each student must complete a thesis describing his or her research.
Thesis research should begin during the first year of study at Stanford
and should be completed before the end of the second year of residence.
Early during the thesis research period, and after consultation with the
student, the thesis adviser appoints a second reader for the thesis who
must be approved by the graduate coordinator; the thesis adviser is
the first reader. The two readers jointly determine whether the thesis is
acceptable for the M.S. degree in the department.

Master of Science, Course Work Only Option for ESS
Ph.D. Students
The course-work-only M.S. for ESS Ph.D. students requires 45
duplicated units of which all 45 must be course work (non-research,
non-independent study, non-thesis units). All required units must be in
courses at the 100-level or above, 50 percent of those units must be in
graduate-level courses (generally, at the 200-level or above). No units
are awarded for course work completed elsewhere (i.e., not eligible to
transfer-in units). All 45 units can be applied to the 135 unit requirement
for the Ph.D. The remaining 90 units can consist of all research units

On April 16, 2015, the Senate of the Academic Council approved
the Doctor of Philosophy in Earth System Science. Students who
matriculated into the Doctor of Philosophy in Environmental Earth
System Science have the option of changing the name of their degree to
Earth System Science. Degree requirements remain the same.

Doctor of Philosophy in Earth System
Science
The University’s requirements for the Ph.D. degree are outlined in
the "Graduate Degrees (http://www.stanford.edu/dept/registrar/
bulletin/4901.htm)* section of this bulletin.

Admission
For admission to graduate work in the department, the applicant must
have taken the Aptitude Test (verbal, quantitative, and analytical writing
assessment) of the Graduate Record Examination. In keeping with
University policy, applicants whose first language is not English must
submit TOEFL (Test of English as a Foreign Language) scores from a test
taken within the last 18 months. Individuals who have completed a B.S. or
two-year M.S. program in the U.S. or other English-speaking country are
not required to submit TOEFL scores.

Unit Requirements
1. A minimum of 135 units of graduate study at Stanford must be
satisfactorily completed.
2. Required courses must be taken for a letter grade, if offered.
3. Ph.D. students registered for 10 units must pass at least 6 units per
quarter. Students must maintain at least a 3.0 grade point average.
4. Ph.D. students must complete a minimum of four graduate level,
letter-grade courses of at least 3 units each from four different faculty
members on the Academic Council in the University.
5. By the end of Spring Quarter of their first year in residence, students
must complete at least three graduate level courses taught by a
minimum of two different ESS faculty members.

the department (for example, for unsatisfactory progress). University degree program. Candidacy is valid for five calendar years (through the student's potential to successfully complete the requirements of the degree is a judgment by the faculty in the department or school of the student from admission to candidacy. Admission to candidacy for the doctoral degree program is preliminary to, and distinct. The entire examination lasts no less than 2 hours and no more than 3 hours; the examination under part 3 is at least one hour. No part of examination is public. Doctoral Dissertation and Oral Defense

Under the supervision of the research advisory committee, the candidate must prepare a doctoral dissertation that is a contribution to knowledge and is the result of independent research; curriculum must also be developed with the supervision of the committee, which should be designed to provide a rigorous foundation for the research area. The format of the dissertation must meet University guidelines. The student is urged to prepare dissertation chapters that, in scientific content and format, are readily publishable.

The doctoral dissertation is defended in the University oral examination. The department appoints the research adviser and two other members of the research committee to be readers of the draft dissertation. The readers are charged to read the draft and to certify in writing to the department that it is adequate to serve as a basis for the University oral examination. Upon obtaining this written certification, the student is permitted to schedule the University oral examination.

Graduate Advising Expectations

The Department of Earth System Science is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual
understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (http://exploredegrees.stanford.edu/graduatedegrees/#advisingandcredentialstext)" section of this bulletin.

Chair: Robert Jackson

Professors: Kevin Arrigo, Noah Diffenbaugh, Robert Dunbar, Scott Fendorf, Christopher Field, Christopher Francis, Steven Gorelick, Robert Jackson, Eric Lambin, David Lobell, Pamela Matson, Rosamond Naylor

Associate Professors: Karen Casciotti, James Holland Jones, Kate Maher, Leif Thomas

Assistant Professors: Marshall Burke, Anne Dekas, Alexandra Konings, Morgan O'Neill, Aditi Sheshadri, Paula Welander

Courtesy Professors: Gregory Asner, Ken Caldeira, Anna Michalak, Peter Vitousek

Visiting Professors:

1 Joint appointment with Biology
2 Joint appointment with the Precourt Institute for Energy
3 Joint appointment with the Woods Institute for the Environment
4 Joint appointment with the Freeman Spogli Institute for International Studies
