The Stanford Bioengineering (BIOE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

The department offers an undergraduate major in Bioengineering leading to the B.S. degree in Bioengineering.

**Learning Outcomes (Undergraduate)**

The learning outcomes are used in evaluating students as well as the department’s undergraduate program. The department expects undergraduate majors in the program to be able to demonstrate the ability to:

1. Apply the knowledge of mathematics, science, and engineering.
2. Design and conduct experiments, as well to analyze and interpret data.
3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
4. Function on multidisciplinary teams.
5. Identify, formulate, and solve engineering problems.
6. Understand professional and ethical responsibility.
7. Communicate effectively.
8. Understand the impact of engineering solutions in a global, economic, environmental, and societal context.
9. Demonstrate a working knowledge of contemporary issues.
10. Apply the techniques, skills, and modern engineering tools necessary for engineering practice.
11. Transition from engineering concepts and theory to real engineering applications.

**Mission of the Undergraduate Program in Bioengineering**

The Stanford Bioengineering (BIOE) major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in bioengineering earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.

The department offers an undergraduate major in Bioengineering leading to the B.S. degree in Bioengineering.

**Learning Outcomes (Graduate)**

The purpose of the master's program is to provide students with the knowledge and skills necessary for a professional career or doctoral studies. This is done through coursework with specialization in an area of the field, including biomedical computation, regenerative medicine and tissue engineering, molecular and cell bioengineering, biomedical imaging, and biomedical devices.

The Phd is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research. Through coursework and guided research, the program prepares students to make original contributions in Bioengineering and related fields.

**Graduate Programs in Bioengineering**

The University's requirements for the M.S. and Ph.D. degrees are outlined in the “Graduate Degrees (http://exploredegrees.stanford.edu/graduatedegrees)” section of this bulletin.

**Admission**

Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Students entering the program are assessed by the examination of their undergraduate transcripts and research experiences. Specifically, the department requires that students have completed mathematics through multivariable calculus and differential equations, completed a series of undergraduate biology courses and completed physics, chemistry, and computer sciences courses required of all undergraduate majors in engineering.

Qualified applicants are encouraged to apply for predoctoral national competitive fellowships, especially those from the National Science Foundation. Applicants to the Ph.D. program should consult with their financial aid officers for information and applications.

The deadline for receiving applications is December 3, 2019. The Graduate Record Examination (GRE) is not required for admission to the M.S. or Ph.D. program in Bioengineering.

Further information and application instructions for all graduate degree programs may be obtained from Graduate Admissions (http://gradadmissions.stanford.edu).

**Bachelor of Science in Bioengineering**

The department offers an undergraduate major in Bioengineering (BIOE) leading to the B.S. degree in Engineering. For additional information, see the Handbook for Undergraduate Engineering Programs (UGHB).

**Bioengineering (BIOE)**

Completion of the undergraduate program in Bioengineering leads to the conferral of the Bachelor of Science in Bioengineering.

**Mission of the Undergraduate Program in Bioengineering**

The Stanford Bioengineering major enables students to combine engineering and the life sciences in ways that advance scientific discovery, healthcare and medicine, manufacturing, environmental quality, culture, education, and policy. Students who major in BioE earn a fundamental engineering degree for which the raw materials, underlying basic sciences, fundamental toolkit, and future frontiers are all defined by the unique properties of living systems.
Students will complete engineering fundamentals courses, including an introduction to bioengineering and computer programming. A series of core BIOE classes beginning in the second year leads to a student-selected depth area and a senior capstone design project. The department also organizes a summer Research Experience for Undergraduates (REU) program. BIOE graduates are well prepared to pursue careers and lead projects in research, medicine, business, law, and policy.

**Requirements**

### Mathematics

<table>
<thead>
<tr>
<th>Unit</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 units minimum (Prerequisites: 10 units of AP or IB credit or Mathematics 20-series)</td>
<td></td>
</tr>
<tr>
<td>Select one of the following:</td>
<td></td>
</tr>
<tr>
<td>CME 100 &amp; CME 102</td>
<td>Vector Calculus for Engineers and Ordinary Differential Equations for Engineers (Recommended)</td>
</tr>
<tr>
<td>MATH 51 &amp; MATH 53</td>
<td>Linear Algebra, Multivariable Calculus, and Modern Applications and Ordinary Differential Equations with Linear Algebra</td>
</tr>
</tbody>
</table>

Select one of the following:

- CME 106 Introduction to Probability and Statistics for Engineers (Recommended)
- or STATS 110 Statistical Methods in Engineering and the Physical Sciences
- or STATS 141 Biostatistics

### Science

Total Units: 104-107

1. It is strongly recommended that CME 100 Vector Calculus for Engineers and CME 102 Ordinary Differential Equations for Engineers be taken rather than MATH 51 Linear Algebra, Multivariable Calculus, and Modern Applications and MATH 53 Ordinary Differential Equations with Linear Algebra. If you are taking the MATH 50 series, it is strongly recommended to take CME 192 Introduction to MATLAB. CME 106 Introduction to Probability and Statistics for Engineers utilizes MATLAB, a powerful technical computing program, and should be taken rather than STATS 110 Statistical Methods in Engineering and the Physical Sciences or STATS 141 Biostatistics. Although not required, CME 104 Linear Algebra and Partial Differential Equations for Engineers is recommended for some Bioengineering courses.

2. Science must include both Chemistry (CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II; or CHEM 31M Chemical Principles: From Molecules to Solids) and calculus-based Physics (PHYSICS 41 Mechanics and PHYSICS 43 Electricity and Magnetism), with two quarters of course work in each, in addition to two courses of BIO core. CHEM 31A Chemical Principles I and CHEM 31B Chemical Principles II are considered one course even though given over two quarters.
The application must provide evidence of potential for strong academic performance as a graduate student. The application is evaluated and acted upon by the graduate admissions committee of the department. Students are expected to enter with a series of core competencies in mathematics, biology, chemistry, physics, computing, and engineering. Typically, a GPA of at least 3.5 in engineering, science, and math is expected.

University Coterminal Requirements
Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (http://exploredegrees.stanford.edu/cotermdegrees/)" section. University requirements for the master's degree are described in the "Graduate Degrees (http://exploredegrees.stanford.edu/graduatedegrees/#masterstext)" section of this bulletin.

After accepting admission to this coterminal master’s degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master’s degree requirements.

Course transfers are not possible after the bachelor’s degree has been conferred.

The University requires that the graduate adviser be assigned in the student’s first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master’s Degree Program Proposal be completed by the student and approved by the department by the end of the student’s first graduate quarter.

Master of Science in Bioengineering
The Master of Science in Bioengineering requires 45 units of coursework. The curriculum consists of core bioengineering courses, technical electives, core seminars and unrestricted electives. Core courses focus on quantitative biology and biological systems analysis. Approved technical electives are chosen by the student in consultation with his/her graduate adviser, and can be selected from graduate course offerings in mathematics, statistics, engineering, physical sciences, life sciences, and medicine. Seminars highlight emerging research in bioengineering and provide training in research ethics. Unrestricted electives can be freely chosen by the student in association with his/her adviser.

Requirements
The department’s requirements for the M.S. in Bioengineering are:

1. Core Bioengineering courses (10 units)

The following courses are required:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOE 300A</td>
<td>Molecular and Cellular Bioengineering</td>
<td>3</td>
</tr>
<tr>
<td>BIOE 300B</td>
<td>Quantitative Physiology</td>
<td>3</td>
</tr>
</tbody>
</table>

Select two of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOE 301A</td>
<td>Molecular and Cellular Engineering Lab</td>
</tr>
<tr>
<td>BIOE 301B</td>
<td>Clinical Needs and Technology</td>
</tr>
<tr>
<td>BIOE 301C</td>
<td>Diagnostic Devices Lab</td>
</tr>
</tbody>
</table>
2. Approved Technical Electives (27 units)
These units must be selected from graduate courses in mathematics, statistics, engineering, physical science, life science, and medicine. They should be chosen in concert with the bioengineering courses to provide a cohesive degree program in a bioengineering focus area.

Students are required to take at least one course in some area of device or instrumentation. Up to 9 units of directed study and research may be used as approved electives.

3. Core Seminars (2 units)
The seminar units should be fulfilled through:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIOE 393</td>
<td>Bioengineering Departmental Research Colloquium</td>
<td>1</td>
</tr>
<tr>
<td>MED 255</td>
<td>The Responsible Conduct of Research</td>
<td>1</td>
</tr>
</tbody>
</table>

Other relevant seminar units may also be used with the approval of the faculty adviser. One of the seminar units must be MED 255 The Responsible Conduct of Research.

4. Unrestricted Electives (6 units).
Students are assigned an initial faculty adviser to assist them in designing a plan of study that creates a cohesive degree program.

To ensure that an appropriate program is pursued by all M.S. candidates, students who first matriculate at Stanford at the graduate level must:

1. submit an adviser-approved Program Proposal for a Master’s Degree form to the student services office during the first month of the first quarter of enrollment
2. obtain approval from the M.S. adviser and the Chair of Graduate Studies for any subsequent program change or changes.

It is expected that the requirements for the M.S. in Bioengineering can be completed within approximately one year. There is no thesis requirement for the M.S.

Due to the interdisciplinary nature of Bioengineering, a number of courses are offered directly through the Bioengineering Department but many are available through other departments. See respective ExploreCourses for course descriptions.

Doctor of Philosophy in Bioengineering
The University’s basic requirements for the Ph.D. degree are outlined in the “Graduate Degrees (http://exploredegrees.stanford.edu/graduatedegrees)” section of this bulletin.

A student studying for the Ph.D. degree must complete a master’s degree (45 units) comparable to that of the Stanford M.S. degree in Bioengineering. Up to 45 units of master’s degree residency units may be counted towards the degree. The Ph.D. degree is awarded after the completion of a minimum of 135 units of graduate work as well as satisfactory completion of any additional University requirements.

Students admitted to the Ph.D. program with an M.S. degree must complete at least 90 units of work at Stanford. The maximum number of transfer units is 45.

On the basis of the research interests expressed in their application, students are assigned an initial faculty adviser who assists them in choosing courses and identifying research opportunities. One of the most important goals of the first year is to identify a primary research adviser.

The department does not require formal lab rotations, but students are encouraged to explore research activities in three or a maximum of four labs during their first academic year.

Prior to being formally admitted to candidacy for the Ph.D. degree, the student must demonstrate knowledge of Bioengineering fundamentals and a potential for research by passing a qualifying oral examination before the end of the second year.

In the beginning of the second year, the student is required to select a quantitative topic and a biology/medicine topic on which to be examined. Approximately one month before the exam, the student must submit an application containing items including a curriculum vitae, 2-3 page research project proposal, and transcript to the student services office. The exams are taken during a two-day period in Spring Quarter for all students. More information about the exam may be obtained from the student services office.

Successfully passing the qualifying exam, as well as completing the master’s degree requirements, is required for students to advance to candidacy. Advancement to candidacy by University requirements must occur by the end of the Summer of the second year. Thus, all required master’s degree coursework must be completed during the first two years of graduate study. Students who transfer master’s degree residency units to the Bioengineering Ph.D. degree are still required to fulfill the core course and core seminar requirements. In cases where students have already completed an equivalent course as part of their master’s degree, they may submit a petition to the graduate studies committee to have their previous coursework applied to the core bioengineering course requirement.

In addition to the course requirements of the M.S. degree, doctoral candidates must complete a minimum of 15 additional units of approved formal course work (excluding research, directed study, and seminars). Finally, serving as a teaching assistant for two courses is a requirement for the Ph.D. in Bioengineering. Both the 15 additional units and the teaching assistant requirement must be completed before the end of the 3rd year.

Dissertation Reading Committee
Each Ph.D. candidate is required to establish a reading committee for the doctoral dissertation within six months after passing the department’s Ph.D., qualifying exams. Thereafter, the student should consult frequently with all members of the committee about the direction and progress of the dissertation research, no less than once per year.

A dissertation reading committee consists of the principal dissertation adviser and at least two other readers. Reading committees in Bioengineering may include faculty from another department. It is required that two members of the Bioengineering faculty, including primary and/or courtesy faculty be on each reading committee. The initial committee and any subsequent changes must be officially approved by the Department Chair.

University Oral and Dissertation
The Ph.D. candidate is required to take the University oral examination after the dissertation is substantially completed (with the dissertation draft in writing) but before final approval. The examination consists of a public presentation of dissertation research, followed by substantive private questioning on the dissertation and related fields by the University oral committee (four selected faculty members, plus a chair from another department). Once the oral has been passed, the student finalizes the dissertation for reading committee review and final approval.

Ph.D. Minor in Bioengineering
Doctoral students pursuing a Ph.D. degree in a degree program other than Bioengineering may apply for the Ph.D. minor in Bioengineering. A minor
is not a requirement for any degree but is available when agreed upon by
the student and the major and minor department.

A student desiring a Ph.D. minor in Bioengineering must have a minor
program adviser who is a regular Bioengineering faculty member. This
adviser must be a member of the student’s reading committee for
the doctoral dissertation, and the entire reading committee must meet at
least one year prior to the date of the student’s dissertation defense.

The Ph.D. minor program must include at least 20 units of course work
in Stanford Bioengineering or Bioengineering cognate courses at or
above the 200 level. Of these 20 units, no more than 10 can be in cognate
courses. All courses listed to fulfill the 20-unit requirement must be taken
for a letter grade and the GPA must be at least 3.25. Courses used for
a minor may not be used to also meet the requirements for a master’s
degree.

M.D./Ph.D. Dual Degree Program

Students interested in a career oriented towards bioengineering and
medicine can pursue the combined M.D./Ph.D. degree program. Stanford
has two ways to do an M.D./Ph.D. U.S. citizens and permanent residents
can apply to the Medical Scientist Training Program and can be accepted
with funding from both M.D. and Ph.D. programs for stipend and tuition.
They then apply to the Bioengineering Ph.D. during their first or second
year of M.D. training. Students not admitted to the Medical Scientist
Training Program must apply to be admitted separately to the M.D.
program and the Ph.D. program of their choice.

The Ph.D. is administered by the Department of Bioengineering. To be
formally admitted as a Ph.D. degree candidate in this combined degree
program, the student must apply through normal departmental channels
and must have earned or have plans to earn an M.S. in Bioengineering or
another engineering discipline at Stanford or another university. The M.S.
requires 45 units of course work which consists of core bioengineering
courses, technical electives, seminars, and 6 unrestricted units. It is not
permissible to substitute medical school courses for the bioengineering
core course requirements. Students must also pass the Department of
Bioengineering Ph.D. qualifying examination.

For students fulfilling the full M.D. requirements who earned their
master’s level engineering degree at Stanford, the Department of
Bioengineering waives the normal departmental requirement of 15
units applied towards the Ph.D. degree beyond the master’s degree
level through formal coursework. Consistent with the University Ph.D.
requirements, the department accepts 15 units comprised of courses,
research, or seminars approved by the student’s academic adviser and
the department chair. Students not completing their M.S. engineering
degree at Stanford are required to take 15 units of formal course work in
engineering-related areas as determined by their academic adviser.

Joint Degree Programs in Bioengineering
and the School of Law

The School of Law and the Department of Bioengineering offer joint
programs leading to either a J.D. degree combined with an M.S.
degree in Bioengineering or to a J.D. degree combined with a Ph.D. in
Bioengineering.

The J.D./M.S. and J.D./Ph.D. degree programs are designed for students
who wish to prepare themselves intensively for careers in areas relating
to both law and bioengineering. Students interested in either joint
degree program must apply and gain entrance separately to the School
of Law and the Department of Bioengineering and, as an additional
step, must secure permission from both academic units to pursue
degrees in those units as part of a joint degree program. Interest in
either joint degree program should be noted on the student’s admission
applications and may be considered by the admissions committee
of each program. Alternatively, an enrolled student in either the Law
School or the Bioengineering Department may apply for admission to the
other program and for joint degree status in both academic units after
commencing study in either program.

Joint degree students may elect to begin their course of study in either
the School of Law or the Department of Bioengineering. Faculty advisers
from each academic unit will participate in the planning and supervision
of the student’s joint program. Students must be enrolled full time in the
Law School for the first year of law school, and, at some point during the
joint program, may be required to devote one or more quarters largely
or exclusively to studies in the Bioengineering program regardless of
whether enrollment at that time is in the Law School or in the Department
of Bioengineering. At all other times, enrollment may be in the graduate
school or the Law School, and students may choose courses from
either program regardless of where enrolled. Students must satisfy the
requirements for both the J.D. and the M.S. or Ph.D. degrees as specified
in the Stanford Bulletin or elsewhere.

The Law School shall approve courses from the Bioengineering
Department that may count toward the J.D. degree, and the
Bioengineering Department shall approve courses from the Law School
that may count toward the M.S. or Ph.D. degree in Bioengineering. In
either case, approval may consist of a list applicable to all joint degree
students or may be tailored to each individual student’s program. The
lists may differ depending on whether the student is pursuing an M.S. or
a Ph.D. in Bioengineering.

In the case of a J.D./MS program, no more than 45 units of approved
courses may be counted toward both degrees. In the case of a J.D./
Ph.D. program, no more than 54 units of approved courses may be
counted toward both degrees. In either case, no more than 36 units of
courses that originate outside the Law School may count toward the
law degree. To the extent that courses under this joint degree program
originate outside of the Law School but count toward the law degree,
the law school credits permitted under Section 17(1) of the Law School
Regulations shall be reduced on a unit-per-unit basis, but not below zero.
The maximum number of law school credits that may be counted toward
the M.S. or Ph.D. in Bioengineering is the greater of: (i) 15 units; or (ii)
the maximum number of units from courses outside of the department
that M.S. or Ph.D. candidates in Bioengineering are permitted to count toward
the applicable degree under general departmental guideline or in the
case of a particular student’s individual program. Tuition and financial aid
arrangements will normally be through the school in which the student is
then enrolled.

Graduate Advising Expectations

The Department of Bioengineering is committed to providing academic
advising in support of graduate student scholarly and professional
development. When most effective, this advising relationship entails
collaborative and sustained engagement by both the adviser and the
advisee. As a best practice, advising expectations should be periodically
discussed and reviewed to ensure mutual understanding. Both the
adviser and the advisee are expected to maintain professionalism and
integrity.

Graduate students are active contributors to the advising relationship,
proactively seeking academic and professional guidance and taking
responsibility for informing themselves of policies and degree
requirements for their graduate program.

For a statement of University policy on graduate advising, see
the “Graduate Advising (http://exploredegrees.stanford.edu/
graduatedegrees/#advisingandcredentialstext)” section of this bulletin.

Master’s Advising

At the start of graduate study, each student is assigned a master’s
program adviser: a member of our faculty who provide guidance
in course selection and in exploring academic opportunities and
professional pathways. The department’s graduate handbook provides information and suggested timelines for advising meetings. Usually, the same faculty member serves as a program adviser for the duration of master’s study, but the handbook does describe a process for formal adviser changes.

In addition, the faculty Director of Graduate Studies (DGS) is available during the academic year by email and during office hours.

The department’s student services office is also an important part of the master’s advising team. They inform students and advisers about University and department requirements, procedures, and opportunities, and they maintain the official records of advising assignments and approvals.

**Doctoral Advising**

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways. The department’s graduate handbook provides information and suggested timelines for advising meetings in the different stages of the doctoral program.

Ph.D. students are initially assigned a program adviser on the basis of the interests expressed in their application. This faculty member provides initial guidance in course selection, in exploring academic opportunities and professional pathways, and in identifying doctoral research opportunities.

Students identify their doctoral research/thesis adviser prior to the end of the first year of study. The research adviser assumes primary responsibility for the future direction of the student, taking on the roles previously filled by the program adviser, and ultimately directs the student’s dissertation. Most students find an adviser from among the primary faculty members of our department. However, the research adviser may be a faculty member from another Stanford department who is a member of the Academic Council, familiar with supervising doctoral students, and able to provide both advising and funding for the duration of the doctoral program. When the research adviser is from outside our department, the student must also identify a program adviser from the department’s primary faculty to provide guidance on departmental requirements and opportunities.

MCL faculty may not be the primary advisers of students. Although a co-adviser from the MCL line is permissible in some situations, the primary adviser must provide at least 50% of the mentoring for the student. Evidence that a student is receiving greater than 50% of mentoring from the primary adviser includes: full attendance of lab meetings, regular one-on-one meetings, dedicated space in the primary adviser’s lab, funding provided by the primary adviser, and research being performed in an area that is of current relevance to the program adviser. Advising situations that do not meet these criteria are subject to review by the graduate studies committee.

Throughout the Ph.D., each student is required to fill out an annual Individual Developmental Plan (IDP), usually in the Summer. The IDP is then discussed with the research adviser, as a way to facilitate: advising the student, both during and beyond the PhD; establishing clear expectations on both sides with respect to degree progress and timely graduation; and emphasizing the importance of wellness in graduate school, together with access to University wellness resources.

The Faculty Director of Graduate Studies (DGS) is also available during the academic year by email and during office hours. The department’s student services office is also an important part of the doctoral advising team: they inform students and advisers about University and department requirements, procedures, and opportunities, and they maintain the official records of advising assignments and approvals. Students are encouraged to talk with the DGS and the student services office as they consider adviser selection or for guidance in working with their adviser(s).

**Chair:** Jennifer R. Cochran

**Director of Undergraduate Studies:** Karl Deisseroth

**Director of Graduate Studies:** Markus Willard Covert

**Professors:** Russ B. Altman, Kwabena Boahen, Wah Chiu, Jennifer R. Cochran, Karl Deisseroth, Scott L. Delp, Norbert J. Pelc, Stephen R. Quake, Christina D. Smolke, James R. Swartz, Paul Yock

**Associate Professors:** Annelise E. Barron, Zev David Bryant, Markus Willard Covert, Andrew Endy, Michael Fischbach, Kerwyn C. Huang, Jin Hyung Lee, Michael Z. Lin, Jan T. Liphardt, Alison Lesley Marsden, Manu Prakash, Fan Yang

**Assistant Professors:** Lacramioara Bintu, David B. Camarillo, Polly M. Fordyce, Possu Huang, Paul Nuyujukian, Lei Stanley Qi, Bo Wang

**Associate Professors, by courtesy:** Sarah Heilshorn, Marc E. Levenston, Sakti Srivastava, Yunzhi Peter Yang

**Assistant Professors, by courtesy:** Eric Appel, Mary Frances Nunez Teruel, James K. Wall

**Adjunct Professors:** Uday Kumar, John Linehan, Vijay Pande, Marc L. Salit, Gordon Saul, Charles A. Taylor

**Lecturers:** Siavash Ahrar, Todd Brinton, Natalia Khuri, Joseph Mandato, Ryan K. Pierce, Joseph Towles, Ross D. Venook, Paul Vorster
