

## Mathematical and Computational Science

Courses offered by Mathematical and Computational Science program are listed under the subject code MCS on the Stanford Bulletin’s ExploreCourses (http://explorecourses.stanford.edu) website.

This interdisciplinary undergraduate degree program in MCS is sponsored by Stanford’s departments of Statistics, Mathematics, Computer Science, and Management Science & Engineering, providing students with a core of mathematics basic to all the mathematical sciences and an introduction to concepts and techniques of computation, optimal decision making, probabilistic modeling, and statistical inference.

Utilizing the faculty and courses of the departments listed above, this major prepares students for graduate study or employment in the mathematical and computational sciences or in those areas of applied mathematics which center around the use of computers and are concerned with the problems of the social and management sciences. A biology option is offered for students interested in applications of mathematics, statistics, and computer science to the biological sciences (bioinformatics, computational biology, statistical genetics, neurosciences); and in a similar spirit, an engineering and statistics option.

### Undergraduate Mission Statement for Mathematical and Computational Science

The mission of the Mathematical and Computational Science Program is to provide students with a core of mathematics basic to all the mathematical sciences and an introduction to concepts and techniques of computation, optimal decision making, probabilistic modeling and statistical inference. The program is interdisciplinary in its focus, and students are required to complete course work in mathematics, computer science, statistics, and management science and engineering. A computational biology track is available for students interested in biomedical applications. The program prepares students for careers in academic, financial and government settings as well as for study in graduate or professional schools.

### Learning Outcomes

The program expects undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department’s undergraduate program.

Students are expected to be able to demonstrate:

1. understanding of principles and tools of statistics.
2. command of optimization and its applications and the ability to analyze and interpret problems from various disciplines.
3. an understanding of computer applications emphasizing modern software engineering principles.
4. an understanding of multivariate calculus, linear algebra, and algebraic and geometric proofs.

### Bachelor of Science in Mathematical and Computational Science

#### Suggested Preparation for the Major

Undeclared students looking for an introduction to MCS may take Data Science 101 (STATS 101, 5 units). If the MCS major is declared, STATS 101 may be used for elective credit toward the major. Students ordinarily would have taken two of the required Math courses (MATH 51 Linear Algebra, Multivariable Calculus, and Modern Applications/MATH 52 Integral Calculus of Several Variables/MATH 53 Ordinary Differential Equations with Linear Algebra) and one of the required Statistics core courses (STATS 116 Theory of Probability, STATS 191 Introduction to Applied Statistics) before declaring MCS during their freshman or sophomore year.

### How to Declare

To declare the major, a student should first meet with an MCS adviser to create a proposed study plan and then with the MCS student services officer to discuss the major. Students ordinarily have taken two of the required MATH 50 series courses and a core Statistics course prior to declaration. Once the student has created a proposed study plan, they should connect with the MCS student services officer and declare the major through Axess.

### Course Requirements for the MCS Bachelor's Degree (78-86 units)

</tbody>
</table>

Select one of the following:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>STATS 191</td>
<td>Introduction to Applied Statistics</td>
</tr>
<tr>
<td>STATS 203</td>
<td>Introduction to Regression Models and Analysis of Variance</td>
</tr>
</tbody>
</table>

1 Students who scored a 5 on both the Calculus AB and BC advanced placement exams (total of 10 units) can be waived out of MATH 19, Calculus, MATH 20 Calculus, MATH 21 Calculus; See also the Registrar’s Advanced Placement [web site](https://registrar.stanford.edu/students/transfer-credit-and-advanced-placement) or IB [placement exams (total of 9-10 units) can be waived out of MATH 19, 20, and 21 are required to take additional Math classes as discussed with MCS student services and the student's faculty adviser.

2 MATH 151 Introduction to Probability Theory is equivalent to STATS 116.

### Writing in the Major Requirement

The University requires students to complete at least one approved writing-intensive course in each of their majors. See the Hume Center for Writing and Speaking [web site](https://undergrad.stanford.edu/tutoring-support/hume-center/writing-major) for a full description of the WIM requirement.

Choose one from the MCS-designated WIM courses to fulfill the Writing in the Major requirement:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 109</td>
<td>Applied Group Theory</td>
</tr>
<tr>
<td>MATH 110</td>
<td>Applied Number Theory and Field Theory</td>
</tr>
<tr>
<td>MATH 120</td>
<td>Groups and Rings</td>
</tr>
<tr>
<td>MATH 171</td>
<td>Fundamental Concepts of Analysis</td>
</tr>
<tr>
<td>CS 181W</td>
<td>Computers, Ethics, and Public Policy</td>
</tr>
<tr>
<td>STATS 155</td>
<td>Statistical Methods in Computational Genetics</td>
</tr>
</tbody>
</table>

WIM courses offered by other majors may be used in cases of specific concentrations (e.g. biology, decision theory). Advisor approval required.

### Mathematical and Computational Science Approved Electives

Choose three courses in Mathematical and Computational Science 100-level or above, at least 3 units each from two different departments.

Choose three electives:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECON 102C</td>
<td>Advanced Topics in Econometrics</td>
</tr>
</tbody>
</table>

<table>

</tbody>
</table>
Grade and Course Requirements:

- All courses used to fulfill major requirements must be taken for a letter grade with the exception of courses offered satisfactory/no credit only.
- The student must have a grade point average (GPA) of 3.0 or better in all course work used to fulfill the major requirement.
- Students who earn less than a ‘C+’ in STATS 116 Theory of Probability or STATS 200 Introduction to Statistical Inference must repeat the course.
- Only one MCS core course can be substituted by filing a petition with their adviser (with the exception of STATS 116 Theory of Probability which cannot be substituted). The Course Substitution Form (https://mcs.stanford.edu/sites/default/files/mcs-course-substitution_form_0.pdf) must be submitted the quarter prior to enrolling in the course.
- Course transfer credit is subject to department evaluation and to the Office of the Registrar’s external credit evaluation. These courses may result in a replacement course for MCS required course or may establish placement in a higher-level course. Transfer requests must first be submitted to Student Services Center prior to being evaluated by your adviser. Submit the MCS Program Transfer Credit Form (https://mcs.stanford.edu/sites/default/files/mcs_ug_course_equiv_petition_1.pdf) to the student services office.
- At least three quarters before graduation, majors must file with their adviser a plan for completing degree requirements.

Mathematical and Computational Science Biology Track (Option)

Students in the Biology track take the introductory courses for the Mathematics and Computational Sciences major with the following allowable substitutions as electives.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS 143</td>
<td>Compilers</td>
</tr>
<tr>
<td>CS 157</td>
<td>Computational Logic</td>
</tr>
<tr>
<td>CS 161</td>
<td>Design and Analysis of Algorithms</td>
</tr>
<tr>
<td>CS 194</td>
<td>Software Project</td>
</tr>
<tr>
<td>CS 221</td>
<td>Artificial Intelligence: Principles and Techniques</td>
</tr>
<tr>
<td>CS 223A</td>
<td>Introduction to Robotics</td>
</tr>
<tr>
<td>CS 225A</td>
<td>Experimental Robotics</td>
</tr>
<tr>
<td>CS 228</td>
<td>Probabilistic Graphical Models: Principles and Techniques</td>
</tr>
<tr>
<td>CS 229</td>
<td>Machine Learning</td>
</tr>
<tr>
<td>CS 243</td>
<td>Program Analysis and Optimizations</td>
</tr>
<tr>
<td>CS 246</td>
<td>Mining Massive Data Sets</td>
</tr>
<tr>
<td>CS 248</td>
<td>Interactive Computer Graphics</td>
</tr>
</tbody>
</table>

Electives that are not offered this year, but may be offered in subsequent years, are eligible for credit toward the major.

With the advisor's approval, courses other than those listed or offered by the sponsoring departments may be used to fulfill part of the elective requirement. Courses must provide skills relevant to the MCS degree and do not overlap courses in the student's program. Depending on student's interests, these may be in fields such as, biology, economics, electrical engineering, industrial engineering, and medicine, are otherwise relevant to a mathematical sciences major.

Mathematical and Computational Science Engineering Track (Option)

Students in the Engineering track take the introductory courses for the Mathematics and Computational Sciences major with the following allowable substitutions.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIO 84</td>
<td>Physiology</td>
</tr>
<tr>
<td>BIO 85</td>
<td>Evolution</td>
</tr>
<tr>
<td>BIO 86</td>
<td>Cell Biology</td>
</tr>
</tbody>
</table>

Or take two courses from the Biology core and one of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIO 104</td>
<td>Advance Molecular Biology: Epigenetics and Proteostasis</td>
</tr>
<tr>
<td>BIO 133</td>
<td>Conservation Biology: A Latin American Perspective</td>
</tr>
<tr>
<td>BIO 144</td>
<td>Statistical Inference</td>
</tr>
<tr>
<td>BIO 183</td>
<td>Theoretical Population Genetics (offered alternate years)</td>
</tr>
<tr>
<td>BIO 230</td>
<td>Molecular and Cellular Immunology</td>
</tr>
</tbody>
</table>

Honors students select the following three courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>STATS 155</td>
<td>Statistical Methods in Computational Genetics</td>
</tr>
<tr>
<td>BIO 113</td>
<td>Fundamentals of Molecular Evolution</td>
</tr>
<tr>
<td>BIO 146</td>
<td></td>
</tr>
</tbody>
</table>

The following courses are no longer offered, but may be used by students who completed them in fulfillment of this requirement: BIO102, 160A & 160B

1 STATS 141 (https://explorecourses.stanford.edu/search?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=stats141&collapse=): Biostatistics (BIO 141) can replace STATS 191 Introduction to Applied Statistics or STATS 203 Introduction to Regression Models and Analysis of Variance from the major’s Statistics core requirement.

Mathematical and Computational Science Biology Track (Option)

Students in the Biology track take the introductory courses for the Mathematics and Computational Sciences major with the following allowable substitutions.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>STATS/BIO 141</td>
<td>Biostatistics 1</td>
</tr>
</tbody>
</table>

</tbody>
</table>

Honors Program
The honors program is designed to encourage a more intensive study of mathematical sciences than the B.S. program. Students interested in honors should consult with their faculty adviser as soon as possible to allow more opportunities in course planning and concentration area. The honors program allows for a capstone experience, building upon the student’s current academic knowledge and strengthening their understanding in a specific field of study/concentration. Honors work may be concentrated in fields such as biological sciences and medicine, environment, physics, sports analytics, investment science, AI/machine learning, etc.

Students are required to submit an MCS Honors Proposal Form (https://mcs.stanford.edu/sites/g/files/sbybj9376/f/mcs_honors_proposal_form_2019-20.pdf) describing the concentration for honors work, including the courses they intend to use, by the final study list deadline two quarters prior to the expected degree conferral quarter. The honors final report is due no later than the last day of classes of the quarter the student expects to graduate. More information can be found on the MCS Honors Website. (https://mcs.stanford.edu/academics/honors)

In addition to meeting all requirements for the B.S., the student must:

1. Maintain a GPA of at least 3.5 in all academic work.
2. Students should complete 15 units of graduate level coursework. Included in these 15 units can be any of the following:
   a. Related research from a 199 course
   b. Participation for credit in a small group seminar
   c. Directed reading
3. Complete a final report which should:
   a. Include their name, degree and the title of their work.
   b. Be typed with 12pt font, single-spaced, minimum 1 page (no longer than 2 pages) with a one-inch margin at the top and bottom of each page.
   c. Explain a theme between the student’s coursework, their interests, and how they relate to MCS.
   d. Describe how each course selected added to the student’s knowledge and understanding in the chosen area of concentration.
   e. The student’s work must demonstrate in-depth learning of a topic or shared idea in the breadth of the MCS major (examples are on MCS webpage), and all students are held to Stanford’s Honor Code (https://communitystandards.stanford.edu/policies-and-guidance/honor-code).

Suggested electives for students pursuing Honors:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>CME 206 Introduction to Numerical Methods for Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CS/STATS 229 Machine Learning</td>
<td>3-4</td>
</tr>
<tr>
<td>CS 248 Interactive Computer Graphics</td>
<td>3-4</td>
</tr>
<tr>
<td>EE 364A Convex Optimization I</td>
<td>3</td>
</tr>
<tr>
<td>MATH 171 Fundamental Concepts of Analysis</td>
<td>3</td>
</tr>
<tr>
<td>MATH 172 Lebesgue Integration and Fourier Analysis</td>
<td>3</td>
</tr>
<tr>
<td>MATH 205A Real Analysis</td>
<td>3</td>
</tr>
<tr>
<td>STATS 202 Data Mining and Analysis</td>
<td>3</td>
</tr>
<tr>
<td>STATS 216 Introduction to Statistical Learning</td>
<td>3</td>
</tr>
<tr>
<td>STATS 217 Introduction to Stochastic Processes I</td>
<td>3</td>
</tr>
</tbody>
</table>

Minor in Mathematical and Computational Science
The minor in Mathematical and Computational Science is intended to provide an experience of the four constituent areas: Computer Science, Mathematics, Management Science and Engineering, and Statistics. The MCS minor requires 32-34 units. Five basic courses are required:

Select one of the following:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 51 Linear Algebra, Multivariable Calculus, and Modern Applications</td>
<td>3-5</td>
</tr>
<tr>
<td>or MATH 104 Applied Matrix Theory</td>
<td></td>
</tr>
<tr>
<td>Select two of the following:</td>
<td>10</td>
</tr>
<tr>
<td>CS 106A Programming Methodology</td>
<td></td>
</tr>
<tr>
<td>and either CS 106B Programming Abstractions</td>
<td></td>
</tr>
<tr>
<td>or CS 106X Programming Abstractions</td>
<td></td>
</tr>
<tr>
<td>Select one of the following:</td>
<td>3-4</td>
</tr>
<tr>
<td>MS&amp;E 211 Introduction to Optimization</td>
<td></td>
</tr>
<tr>
<td>or MS&amp;E 221 Stochastic Modeling</td>
<td></td>
</tr>
<tr>
<td>Select two of the following:</td>
<td>7</td>
</tr>
<tr>
<td>STATS 116 Theory of Probability</td>
<td>4</td>
</tr>
<tr>
<td>and either STATS 191 Introduction to Applied Statistics</td>
<td></td>
</tr>
</tbody>
</table>
In addition to the above, the minor requires three courses from the following, two of which must be in different departments:

<table>
<thead>
<tr>
<th>Units</th>
<th>Select three of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>CME 108 Introduction to Scientific Computing</td>
</tr>
<tr>
<td></td>
