The requirements for the Ph.D. degree are as follows:

Quarter.
the end of Summer Quarter, the first year, but not before the end of Spring
each student is required to complete a minimum of three, one quarter
training in biology during the first two years of study. During the first year,
chemistry, or mathematics may be admitted if they complete background
biological sciences; applicants with undergraduate majors in physics,
A small number of applicants are admitted to the program each year.
Degrees
University requirements for the Ph.D. are described under the "Graduate
Doctor of Philosophy in Cancer Biology
The Cancer Biology Ph.D. program was established in 1978 at Stanford
University. During the past four decades, the understanding of cancer has
increased dramatically with the discovery of oncogenes and tumor
suppressor genes, pathways of DNA damage and repair, cell cycle
regulation, angiogenesis and responses to hypoxia, and the molecular
basis of metastasis, among others. In addition, methods of parallel
analysis including genomic and proteomic approaches have begun to
refine and redefine the taxonomy of cancer diagnosis. This explosion
of basic and clinical science has, in turn, resulted in the first successful
cancer chemotherapies and immunotherapies based on knowledge of
specific molecular targets. Stanford presents a unique environment to
pursue interdisciplinary cancer research because the School of Medicine,
the School of Humanities and Sciences, and the School of Engineering
are located on a single campus, all within walking distance of one
another.

The goal of the Cancer Biology Ph.D. Program is to provide students
with education and training that will enable them to make significant
ccontributions to this remarkable field. Coursework during the first year
is designed to provide a broad understanding of the molecular, genetic,
cell biological, and pathobiological aspects of cancer. Students also
learn about the current state of clinical diagnosis and treatment of
human cancers. Equally important during the first year is a series of three
rotations in research laboratories chosen by each student. By the end
of the first year, each student has chosen his/her research adviser and
has begun work on his/her dissertation project. A qualifying examination
must be completed before the end of December of the second year. An
annual Cancer Biology Conference provides students with an opportunity
to present their research to one another and to the faculty in the program.
The expected time to degree is four to five years.

Students are not limited to a single department in choosing their
research advisers. The Cancer Biology Ph.D. Program currently has
approximately 65 graduate students located in a variety of basic science
and clinical departments throughout the School of Medicine and School
of Humanities and Sciences. Many students are supported by a training
grant from the National Cancer Institute.

Doctor of Philosophy in Cancer Biology
University requirements for the Ph.D. are described under the "Graduate
Degrees (http://exploredegrees.stanford.edu/graduatedegrees)" section
of this bulletin.

A small number of applicants are admitted to the program each year.
Applicants should have completed an undergraduate major in the
biological sciences; applicants with undergraduate majors in physics,
chemistry, or mathematics may be admitted if they complete background
training in biology during the first two years of study. During the first year,
each student is required to complete a minimum of three, one quarter
laboratory rotations. Students must choose a dissertation adviser prior to
the end of Summer Quarter, the first year, but not before the end of Spring
Quarter.

The requirements for the Ph.D. degree are as follows:

1. Training in biology equivalent to that of an undergraduate biology
major at Stanford.
2. Completion of the following courses:

- BIOS 200 Foundations in Experimental Biology (for students entering in 2012 or later. Students who entered in 2011 or earlier took GENE 203, Advanced Genetics.)
- CBIO 240 Molecular and Genetic Basis of Cancer
- CBIO 242 Cellular and Clinical Aspects of Cancer
- CBIO 280 Cancer Biology Journal Club (required for first- and second-year graduate students in Autumn, Winter, and Spring quarters, totaling 6 units)
- CBIO 245 Lecture Seminar Series in Cancer Biology Program (required for first- and second-year graduate student in Autumn, Winter, and Spring quarters, totaling to 6 units)
- MED 255 The Responsible Conduct of Research

Electives (Total of 10 Units)

3. Other elective course is determined in consultation with the student's
   adviser and/or the Program Director.
4. Presentation of research results at the annual Cancer Biology
   Conference and Pizza Talks.
5. Completion of a qualifying examination in Cancer Biology is required for admission to Ph.D. candidacy. The exam consists of an F31 NRSA-style written grant proposal not to exceed seven pages (excluding references) and an oral examination. The examining committee consists of three faculty members from the Cancer Biology Program but does not include the student’s dissertation adviser. The composition of this committee is chosen by the student and thesis adviser and must be submitted to and approved by the Program Directors prior to the end of Autumn Quarter, second year. The qualifying examination must be taken prior to the end of December of the second year. If necessary, one retake is permitted prior to the end of Summer Quarter, second year. After the qualifying examination has been completed, the student is required to form a dissertation reading committee that includes the student’s adviser and three other members of the Academic Council with appropriate expertise. Each student is required to arrange annual meetings (more frequently, if necessary) of the dissertation reading committee, at which time progress during the past year and a plan of study for the coming year are presented orally and discussed. Completion of each annual committee meeting must be communicated in writing to the program director by the adviser by the end of Spring Quarter each year.

The major accomplishment of each successful Ph.D. student is the presentation of a written dissertation resulting from independent investigation that contributes to knowledge in the area of cancer biology. An oral examination is also required for the Ph.D. degree. In the Cancer Biology Program, a public seminar (one hour) is presented by the Ph.D. candidate, followed by a closed-door oral examination. The oral examination committee consists of at least four examiners (the members of the doctoral dissertation reading committee) and a chair. The oral examination chair must be from outside the Cancer Biology Program faculty and may not have a full or joint appointment in the adviser’s or student’s home department. However, a courtesy appointment does not affect eligibility. The oral examination chair may be from the same department as any other member(s) of the examination committee. All members of the oral examination committee are normally members of the Academic Council, as the oral examination chair must be. With the prior approval of the program director or school dean, one of the examiners may be a person who is not a member of the Academic Council if that individual contributes expertise not otherwise available. Official responsibility for selecting the oral examination chair rests with the program. Cancer Biology delegates this to the student and dissertation adviser.

Advising Expectations

The mission of the Cancer Biology Ph.D. program is to train graduate students so that they may ultimately launch careers related to the study and treatment of cancer. A major goal of the program is to assist students in their growth and development by constructing meaningful educational plans. The program believes that students will become outstanding cancer researchers through frequent and collegial personal contacts with their primary research advisers, members of their thesis committee, and other faculty in the program. Scientific interactions between students and faculty foster the development of motivated students who are independent thinkers and responsible decision makers. The program expects faculty thesis advisers to have an active role in the advising process, including by monitoring progress frequently and by helping define and develop realistic educational career plans through regular interactions with the advisee. Faculty thesis advisers should refer students to other institutional resources as needed. The program expects students to clarify their academic and career goals with their advisers and to be equal partners in the advising process, including by scheduling regular meetings with their advisers and by adhering to institutional policies, procedures, and requirements. These expectations, which are detailed in the program handbook, ensure the successful completion of degree requirements and timely graduation.

For a statement of University policy on graduate advising, see the "Graduate Advising (http://exploredegrees.stanford.edu/graduatedegrees/#advisingandcredentialstext)" section of this bulletin.

Program Co-Directors: Laura Attardi (Radiation Oncology and Genetics) and Julien Sage (Pediatrics and Genetics)

Executive Committee on Cancer Biology: Laura Attardi (Radiation Oncology and Genetics), Edward Graves (Radiation Oncology), Peter Jackson (Microbiology and Immunology; Pathology), Julien Sage (Pediatrics and Genetics), Monte Winslow (Genetics)

Admissions Committee on Cancer Biology: Laura Attardi (Radiation Oncology and Genetics), Max Diehn (Radiation Oncology), Peter Jackson (Microbiology and Immunology; Pathology), Paul Khavari (Dermatology), Jonathan Long (Pathology), Michelle Monje (Neurology), Sharon Pitteri (Radiology), Julien Sage (Pediatrics and Genetics), Katrin Svensson (Pathology), Kevin Wang (Dermatology)

Participating Departments and Faculty

Biochemistry: Philip Beachy (Professor), Mark Krasnow (Professor), Julia Saltman (Assistant Professor)

Bioengineering: Jennifer Cochran (Associate Professor)

Biolog (School of Humanities and Sciences): Scott J. Dixon (Assistant Professor), Judith Frydman (Professor), Or Gozani (Professor), Ashby Morrison (Associate Professor), Dmitri Petrov (Professor), Jan M Skotheim (Associate Professor), Tim Stearns (Professor)

Biomedical Data Science: Aaron Newman (Assistant Professor)

Chemical And Systems Biology: James K. Chen (Professor), Karlene Cimprich (Professor), Mary Teruel (Assistant Professor)

Dermatology: Howard Y. Chang (Professor), Paul A. Khavari (Professor), Carolyn Lee (Assistant Professor), Anthony Oro (Professor), Kevin Wang (Assistant Professor)

Developmental Biology: Margaret Fuller (Professor), Roeland Nusse (Professor)

Genetics: Michael Bassik (Assistant Professor), Anne Brunet (Professor), Christina Curtis (Assistant Professor), Julien Sage (Professor; Co-Director of Stanford Cancer Biology Program), Monte Winslow (Associate Professor)

Medicine/Endocrinology/Gerontology/Metabolism: Katrin Chua (Associate Professor)

Medicine/Gastroenterology and Hepatology: Anson Lowe (Associate Professor)

Medicine/Hematology: Steven Ander (Professor; Director, Stanford Cancer Institute), Calvin Kuo (Professor), Ravindra Majeti (Professor)

Medicine/Oncology: Ash Alizadeh (Associate Professor), Gilbert Chu (Professor), Michael Clarke (Professor), Dean Felsher (Professor), Hanlee Ji (Associate Professor), Ronald Levy (Professor)

Microbiology and Immunology: Helen M. Blau (Professor), Peter Jackson (Professor), Garry Nolan (Professor)

Neurology and Neurosurgery: Michelle Monje (Associate Professor)

Neurosurgery: Albert J. Wong (Professor)

Orthopaedic Surgery: Nidhi Bhatnai (Associate Professor)

Otolaryngology: John Sunwoo (Professor)
Pathology: Jeff Axelrod (Professor), Sean Bendall (Assistant Professor), Matthew Bogyo (Professor), Michael Cleary (Professor), Gerald Crabtree (Professor), Edgar Engleman (Professor), Andrew Fire (Professor), Joseph Lipsick (Professor), Bingwei Lu (Professor), Jonathan Long (Assistant Professor), Jonathan Pollack (Professor), Irving Weissman (Professor; Virginia & D.K. Ludwig Professor for Clinical Investigation in Cancer Research, Professor of Developmental Biology)

Pediatrics/Human Gene Therapy: Mark Kay (Professor)

Pediatrics/Hematology/Oncology: Crystal Mackall (Professor), Matthew Porteus (Professor), Kathleen Sakamoto (Professor)

Radiation Oncology/Radiation and Cancer Biology: Laura Attardi (Professor; Co-Director of Stanford Cancer Biology Program), Richard Frock (Assistant Professor), Edward Graves (Associate Professor), Sharon Pitteri (Associate Professor)

Radiation Oncology/Radiation Therapy: Max Diehn (Associate Professor), Susan Knox (Associate Professor), Quynh-Thu Le (Professor)

Radiology/Diagnostic Radiology: Parag Mallick (Associate Professor, Research), Sylvia Plevritis (Professor)
